**Receptor Binding Techniques** Anthony P. Davenport,2008-02-02 A comprehensive collection of readily reproducible methods for studying receptors in silico in vitro and in vivo These cutting edge techniques cover mining from curated databases identifying novel receptors by high throughput screening molecular methods to identify mRNA encoding receptors radioligand binding assays and their analysis quantitative autoradiography and imaging receptors by positron emission tomography PET Highlights include phenotypic characterization of receptors in knockout mice imaging receptors using green fluorescent protein and fluorescent resonance energy transfer and quantitative analysis of receptor mRNA by TaqMan PCR These book equips the researcher with techniques for exploring the unprecedented number of new receptor systems now emerging and the so called orphan receptors whose activating ligand has not been identified Receptor Binding Techniques ,1980

**Principles and Methods in Receptor Binding** F. Cattabeni,2013-11-11 One of the major advances in the understanding of the mechanism of action of hormones neurotransmitters and drugs had arisen from the hypothesis that the physiological or pharmacological responses are triggered by their interaction with specific cell components termed receptors However the presence of receptors has been inferred from indirect data and only recently has it been possible to study the kinetics of the interaction between drug and receptors directly through the so called binding technique This NATO ASI on Principles and Methods in Receptor Binding was devoted mainly to the following aspects of the study of receptors the principles underlying the use of the binding technique the mathematical models necessary to interpret binding data the application of binding methods to specific receptors and finally a few selected examples of coupling between receptors and physiological responses In the chapters of this book special interest is devoted to the analysis of the simplest models for the interaction of receptors with their ligands either hormones or neurotransmitters or drugs The graphical techniques used to analyze the data from binding experiments are extensively discussed together with the statistics that have to be used in binding analysis Moreover the basic concepts to analyze binding data using a personal computer are presented

**PREFACE** The factors which should be considered when setting up a binding assay such as choice of ligand and incubation conditions preparation of tissue termination of incubation are discussed
