Receptor Mediated Targeting Of Drugs:

Receptor-Mediated Targeting of Drugs G. Gregoriadis, 2013-06-29 Conventional attempts to control cell behaviour and function are often marred by the toxicity of the drugs used their premature waste or inactivation or by their inability to interact with or reach target sites efficiently New trends in pharmacology emphasize the development of methods for the optimization of drug action for instance by the delivery of drugs enzymes hormones antigens genetic material etc through carrier systems selectively to relevant cellular and subcellular sites A wide assortment of carriers was discussed in the first NATO Advanced Studies Institute ASI Targeting of Drugs the proceedings of which were published by Plenum Press in 1982 eds G Gregoriadis J Senior and A Trouet This book containing the proceedings of the 2nd NATO ASI Receptor Mediated Targeting of Drugs held again at Cape Sounion Greece during 20 June 1 July 1983 deals with drug delivery through systems possessing ligands which can recognize and interact with receptors on the target's surface Receptor recognizing carriers that have recently given promise of realistic expectations in targeting include monoclonal antibodies certain proteins that home to specific cells in the body and liposomes either as such when they can trigger specific reactions in the reticuloendothelial system or in association with targeting macromolecules Each of these are discussed extensively by leading authorities in terms of applications in biology and medicine and related methodologies *Targeting of Drugs* Gregory Gregoriadis, Brenda McCormack, 2000 Subject index c Book News Inc **Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis** Padma V. Devarajan, Prajakta Dandekar, Anisha A. D'Souza, 2019-11-09 This book elaborates on drug delivery targeting via intracellular delivery specifically through the Receptor Mediated Endocytosis RME approach due to the involvement of cellular receptors in various grave diseases Targeted delivery relies on two basic approaches passive and active targeting While passive targeting approaches have shown great promise the improved selectivity achieved with active targeting approaches has resulted in significantly higher efficacy Interestingly there are numerous strategies for active targeting many of which are already highlighted in Targeted Drug Delivery Concepts and Applications Nevertheless an exciting and practical strategy for active targeting which could enable high intracellular delivery is through exploitation of RME Cells in the body express receptors to enable various physiological and biochemical processes As a result many of these receptors are overexpressed in pathological conditions or newer receptors expressed due to defective cellular functioning RME is based on exploitation of such receptors to achieve intracellular delivery While targeted delivery can have manifold applications in this book we focus on two major and challenging therapeutic areas i Cancer and ii Infectious Diseases Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis discusses the major receptors that are useful for targeted delivery for these afflictions A major section of this book is dedicated to details regarding their occurrence and location the recognition domain of the receptor structure activity relationship of substrate ligand for selective binding ligands explored antagonists for ligand binding and relevance of these aspects for therapy of

cancer and infectious diseases These facets are elucidated with the help of specific examples from academic research and also emphasize commercial products wherever relevant In vitro cellular models relied on for assessing receptor mediated cellular targeting and in vivo models depicting clinical efficacy are focused on in a separate section Finally we briefly discuss the regulatory and toxicity issues that may be associated specifically with the RME approach of intracellular drug delivery

Ways to improve tumor uptake and penetration of drugs into solid tumors Fabrizio Marcucci, Angelo Corti, Ronald Berenson, 2014-12-05 The main scope of this topic is to give an update on pharmacologic and non pharmacologic approaches to enhance uptake and penetration of cancer drugs into tumors Inadequate accumulation of drugs in tumors has emerged over the last decade as one of the main problems underlying therapeutic failure and drug resistance in the treatment of cancer Insufficient drug uptake and penetration is causally related to the abnormal tumor architecture Thus poor vascularization increased resistance to blood flow and impaired blood supply represent a first obstacle to the delivery of antitumor drugs to tumor tissue Decreased or even inverted transvascular pressure gradients compromise convective delivery of drugs Eventually an abnormal extracellular matrix offers increased frictional resistance to tumor drug penetration Abnormal tumor architecture also changes the biology of tumor cells which contributes to drug resistance through several different mechanisms The variability in vessel location and structure can make many areas of the tumor hypoxic which causes the tumor cells to become quiescent and thereby resistant to many antitumor drugs In addition the abnormally long distance of part of the tumor cell population from blood vessels provides a challenge to delivering cancer drugs to these cells We have recently proposed additional mechanisms of tumor drug resistance which are also related to abnormal tumor architecture First increased interstitial fluid pressure can by itself induce drug resistance through the induction of resistance promoting paracrine factors Second the interaction of drug molecules with vessel proximal tumor cell layers may also induce the release of these factors which can spread throughout the cancer and induce drug resistance in tumor cells distant from blood vessels As can be seen abnormal tumor architecture inadequate drug accumulation and tumor drug resistance are tightly linked phenomena suggesting the need to normalize the tumor architecture including blood vessels and or increase the accumulation of cancer drugs in tumors in order to increase therapeutic effects Indeed several

classes of drugs that we refer to as promoter drugs have been described that promote tumor uptake and penetration of antitumor drugs including those that are vasoactive modify the barrier function of tumor vessels debulk tumor cells and overcome intercellular and stromal barriers In addition also non pharmacologic approaches have been described that enhance tumor accumulation of effector drugs e g convection enhanced delivery hyperthermia etc Some drugs that have already received regulatory approval e g the anti VEGF antibody bevacizumab exert antitumor effects at least in part through normalization of the tumor vasculature and enhancement of the accumulation of effector drugs Other drugs acting through different mechanisms of action are now in clinical development e g NGR TNF in phase II III studies and others are about to enter clinical investigation e g JO 1

Targeted Drug Strategies for Cancer and Inflammation Ann L. Jackman, Christopher P. Leamon, 2011-05-05 Folate pathways are essential in metabolism and macromolecule synthesis Antifolate drugs that are largely transported via a high capacity folate transporter i e the reduced folate carrier and inhibit folate dependent enzymes include the dihydrofolate reductase inhibitor methotrexate and the thymidylate synthase inhibitors raltitrexed and pemetrexed Major advances in folate research made within the last decade include i the approval of pemetrexed for the treatment of lung cancer and mesothelioma and ii the demonstration that cell membrane anchored folate receptors FR are exploitable for cancer and inflammatory disease management FRs are not widely distributed in normal tissues except on some luminal surfaces however they are accessible to systemically administered agents when expressed on many cancers as well as on activated macrophages involved in various inflammatory diseases High affinity folate radioisotope conjugates have been developed for imaging pathogenic FR positive diseases including cancer Since the FR transports folates via a low capacity but high affinity endocytic pathway a variety of FR targeted antifolate drugs and folate conjugates bearing a wide range of payloads including cytotoxic drugs are currently being developed which exploit this property The FR is also being utilized in immunotherapy approaches for the treatment of overexpressing cancers

Microspheres and Regional Cancer Therapy Neville Willmott, John M. Daly, 2020-10-28 Microspheres and Regional Cancer Therapy takes an interdisciplinary approach to the subject of microspheres and regional cancer therapy It synthesizes laboratory and clinical data to demonstrate the utility of microsphere based strategies in the treatment of localized solid tumors particularly in the liver not amenable to surgery and as a component of strategies for treatment of disseminated disease Using the same techniques that show the deficiencies of delivery strategies involving antibodies liposomes and synthetic polymers clear evidence is presented describing how microspheres of appropriate size can be localized in solid tumor deposits in the liver with little exposure to other organs To exploit this phenomenon the extent and nature of the incorporation of active agents within microspheres is discussed in relation to release pharmacokinetics and tumor response achieved by intensification of therapy in the manner described This book will benefit laboratory based scientists and clinicians in pharmaceuticals pharmacology physiology surgical oncology and nuclear medicine In addition cancer clinicians interested in the value of regional therapy
