Receptors And Recognition:

Receptors and recognition Pedro Cuatrecasas, Melvyn F. Greaves, 1976 **Receptors and Recognition** P. Cuatrecasas, 1978 Receptors and Recognition P. Cuatrecasas, M. F. Greaves, 2014-09-01 **Receptors and Recognition** Pedro Cuatrecasas, Melvyn F. Greaves, 1977 **Receptors and Recognition** P. CUATRECASAS AND M. F. GREAVES, 2014-01-23 *Receptors and Recognition* P. Cuatrecasas, M. F. Greaves, 2013-11-21 This new series is concerned with intercellular communication and recognition. It is now widely appreciated that these processes play a crucial role in virtually all biological systems and functions. These encompass fertilisation, embryonic development, infectious interactions, the activity of the nervous system, the regulation of growth and development by hormones and the immune response to foreign or non self antigens. Historically, as described in the first review in this volume, the general concept of cell associated receptors as the molecular entity primarily responsible for the specificity of signal recognition arose independently in the fields of immunology, pharmacology and developmental biology. From an early stage the analogy between cellular recognition and the discriminatory activity of antibodies and enzymes was emphasised. A vital conceptual advance expressed most clearly by Linus Pauling and Paul Weiss was the idea that non covalent molecular interactions of proteins in particular were responsible for biological specificity in general. In the last decade several major advances have led to a new level of understanding of the molecular basis of cellular recognition. In several systems in particular with neurotransmitters, hormones and antigens it is possible to directly demonstrate the existence of receptors associated in each case with the cell surface. These studies have been paralleled by equally important insights into the general structure and organisation of cell membranes and the possible ways in which signals arriving from the outside can be transduced across the cell surface membrane to induce or regulate the cell's programmed responses. **Receptors and Recognition**, 1980 *Receptors and Recognition* Pedro Cuatrecasas, 1978 *Receptors and Recognition* Pedro Cuatrecasas, M. F. Greaves, 1976 *Receptors in the Nervous System* Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors. The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley. Since then receptors have been found to play an important role in numerous physiological and pathological processes. Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success. Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value. Using pharmacological, physiological and immunologic approaches researchers have identified several specific receptors e.g. α and adrenergic, nicotinic and muscarinic, cholinergic and histaminergic. With the characterization of various types of receptors on cell membranes many drugs were developed that proved to

be experimentally and therapeutically useful. It was only in the early 1970s that methods for the specific measurement, chemical characterization and physical isolation of cell membrane receptors were developed. These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands. *Receptors and recognition* Geoffrey ed Burnstock, 1981. The Receptors P. Michael Conn, 2014-05-10. The Receptors Volume IV deals with receptors for intracellular hormones estrogen and sex steroids as well as for dopamine cholecystokinin and corticotropin. The role of surface recognition receptors in disease is also discussed along with receptors for plant auxin action and auxin transport. Comprised of 11 chapters this volume begins with a detailed account of the adrenergic receptor coupled adenylate cyclase and the reconstitution of the functional interactions of its various purified components. The discussion then turns to the mechanism of action of steroid and thyroid hormones and how abnormalities in their receptors lead to disease, nuclear location of estrogen receptors and the biochemistry of the fungal sex steroid receptors as well as the use of *Achlya* as a model system for the study of the mechanism of action of steroid hormones in general. Subsequent chapters focus on dopamine receptors, cholecystokinin receptor, corticotropin receptors and the search for receptors that mediate sweetness. The book concludes with an analysis of endocrine receptors on lymphocytes and the integration of endocrine and immune systems with emphasis on large granular lymphocytes. This monograph will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology, endocrinology and pharmacology.

Receptors Clare Stanford, Roger W. Horton, 2001. Given the number of exciting developments across the whole spectrum of receptor research in recent years the editors have not restricted themselves to one particular approach or class of receptors. Thus the studies within range from G protein coupled surface receptors to the delivery of antisense DNA inside living cell systems. A distinguished team of contributors cover these diverse areas identifying any difficulties likely to be encountered and appropriate steps to overcome them. Wherever appropriate the theoretical basis of each topic is explained first so that the results emerging from the practical procedures can be fully understood. Anyone with an interest in receptor structure and function will find this book an invaluable resource. Receptor Chemistry Towards the Third Millennium M. Gianella, G. Marucci, W. Quaglia, U. Gulini, 2000-05-31. Receptor Chemistry Towards the Third Millennium is the result of papers presented at the 12th Camerino Noordwijkerhout Symposium held in Camerino Italy in September 1999. Although much is known about the way ligands interact with receptors which have now been isolated, characterized and cloned many aspects still remain to be explored. In particular differentiation into distinct subpopulations and the multiplicity of transduction processes offer more specific targets in the search for new drugs. This book will be of interest to medicinal chemists, pharmacologists, biochemists and neurologists and will also be a valuable source of reference for medical students and postgraduate students in related fields. Antigen Processing and Recognition James McCluskey, 1991-09-03. This book

provides a state of the art review of the processing presentation and subsequent recognition of antigens by T cells Topics discussed include the structure of MHC molecules the nature and specificity of human class II molecule interactions with peptide antigens the class II invariant chain antigen processing and presentation by class I MHC molecules the biology of antigen processing and the presentation and role of accessory molecules in T cell recognition Other chapters feature discussions about the T cell allorecognition of MHC molecules the recognition of minor antigens and the concept of superantigens Color plates demonstrate the three dimensional structure of MHC molecules and peptide antigen interaction with MHC molecules Diagrams illustrate antigen presentation pathways T cell receptor MHC interaction and accessory molecule interactions Antigen Processing and Recognition will be a valuable addition to the libraries of students and teachers of immunology as well as cell biologists who are looking for a unified view of this rapidly expanding subject

Molecular Basis of NK Cell Recognition and Function L. Moretta,1996 Natural killer NK cells have been the subject of intense investigation Only in recent years however could the molecular mechanisms by which they lyse tumor or virus infected cells but spare normal cells be elucidated NK cells express different specialized receptors NK R specific for major histocompatibility complex MHC class I molecules These MHC molecules exert an inhibitory effect on NK cells i e lack of expression of one or more MHC class I alleles a common event in tumor or virus infected cells leads to NK mediated target cell lysis Recently NK type receptors have also been identified in a subset of T lymphocytes MHC NK R interaction causes inhibition of T cell activation and functions an observation which suggests a role for these receptors in the negative control of T cell responses This volume offers a complete and updated review of the signal transduction and functions of NK cells as well as their roles in transplantation anti tumor response and infectious diseases Written by experienced investigators who have contributed significantly to progress in the field this collection of reviews will be a valuable resource for basic and clinical immunologists hematologists oncologists and virologists

The Molecular Pathology of Autoimmune Diseases Argyrios N Theofilopoulos,Constantin A. Bona,2002-12-06 Remarkable advances have been made in the pathogenesis of autoimmunity such as with bone marrow transplantation which is becoming a powerful strategy in treating certain life threatening diseases The Molecular Pathology of Autoimmune Diseases is a concise and centralized resource for information on the topic with a special focus on the molecule

Cell Surface Receptors Lee E. Limbird,2006-06-02 Cell Surface Receptors A Short Course on Theory and Methods 3rd Edition links theoretical insights into drug receptor interactions described in mathematical models with the experimental strategies to characterize the biological receptor of interest The study of receptors has changed considerably over the period of the publication of the three editions of this book The cloning of several genomes makes it unlikely that preparations of receptors now or in the future will arise from their purification as trace proteins from native tissues but rather from a myriad of molecular approaches Nonetheless understanding the molecular mechanisms and ultimately the in vivo biology of these receptors means that investigators will engage in molecular

cellular and ultimate in vivo strategies It should be of value to investigators who want to identify characterize and understand the biology of a receptor of interest **Neurotransmitter Receptors** Sam J. Enna,2013-12-11 Since the discovery that neuronal transmission can be chemically mediated a large number of compounds have been found in the mammalian central nervous system which appear to function as neurotransmitter agents Recently electrophysiological and biochemical methods have been developed which have enabled neuroscientists to classify better the myriad of neurotransmitter receptor sites in brain and to study their properties in finer detail As a result of these investigations a significant number of new discoveries have been made about the mechanisms involved in neurotransmitter receptor interactions the role neurotransmitters play in the actions of pharmacological agents and in the pathogenesis of various neuropsychiatric disorders The present two volume text was compiled to summarize the information relating to the physiological biochemical pharmacological and functional characteristics of neurotransmitter receptor sites While emphasis is placed on neurotransmitter receptors in the mammalian central nervous system the characteristics of these receptors in other species both vertebrate and invertebrate are also discussed where appropriate While these books cover the major classes of putative neurotransmitters amino acids peptides and biogenic amines and are therefore broad in scope each is discussed in a concise fashion to highlight the major points of historical and contemporary interest In addition to outlining data each chapter addresses current theories relating to the various aspects of receptor properties and function in an attempt to reveal the directions of future research and as a stimulus for other workers in the field *Biochemical Studies of CNS Receptors* Leslie Iversen,2013-06-29 It is now eight years since the first Handbook volumes on Basic Neuro pharmacology were published and there have been many important advances As in many other areas in science progress in this field has depended to a considerable extent on the availability of new experimental methods and Volume 15 reviews some major recent developments including new autoradiographic techniques that allow direct visualization of drug and transmitter receptors in the nervous system and the pin pointing of the precise locations of the changes in brain metabolism elicited by various drug treatments Volume 16 and 17 cover two of the most active areas for basic research in psychopharmacology at the moment the characterization of drug and transmitter receptors in brain by radioligand binding techniques and studies of the role of small peptides in brain function The latter area in particular illustrates how rapidly progress continues to be made in basic research on the mechanisms of chemical communication within the nervous system Eight years ago when the Handbook first appeared none of the opioid peptides enkephalins and endorphins had yet been identified Since then a whole new area of basic biological research has focused on these substances and in addition we know of more than thirty other neuropeptides with putative eNS trans mitter functions
