culture After a couple of difficult winters AI today is a word on everybody s lips and it attracts everyone s attention regardless of whether they are experts or not From Apple s Siri to Amazon s Alexa Tesla s auto driving cars to facial recognition systems in CCTV cameras Netflix s film offering services to Google s search engine we live in a world of AI goods The advent of AI powered technologies increasingly affects people s lives across the globe As a tool for productivity and cost efficiency AI also shapes our economy and welfare AI generated designs and works are becoming more popular Today AI technologies can generate several intellectual creations Fashion is one of the industries that AI can profoundly impact AI tools and devices are currently being used in the fashion industry to create fashion models fabric and jewellery designs and clothing When we talk about AI generated designs we instead focus on the fruits of innovation more best selling apparels more fashionable designs and more fulfilment of customer expectations without paying heed to who the designer is Designers invest a lot of talent time and finances into designing and creating each article of clothing and accessory before they release their work to the public Pattern drafting is the first and most important step in dressmaking Designers typically start with a general sketch on paper add styles elements and colours revise and refine everything and finally deliver their design to dressmakers AI accelerates this time consuming and labour intensive process Yet the full legal consequences of AI in fashion industry are often forgotten An AI device s ability to generate fashion designs raises the question of who will own intellectual property rights over the fashion designs Will it be the fashion designer who hires or contracts with the AI programmer Will it be the programmer Will it be the AI itself Or will it be a joint work of humans and computers And who will be liable for infringement deriving from use of third party material in AI generated fashion designs This book explores answers to these questions within the framework of EU design and copyright laws It also crafts a solution proposal based on a three step test and model norms which could be used to unleash the authors rights holders and infringers around AI generated fashion designs   *Copyright and Patent Laws for the Age of Artificial Intelligence* Eva Janecková,2025-05-15 This book responds to the need to distinguish human creations from those produced by AI It does so by tracing human attributes of authorship and inventorship in statutory requirements for protection and ownership in European copyright and patent laws Its main contribution lies in exposing shortcomings in how the laws are applied in the UK Germany and France It shows that the human origin of creations is traditionally inferred from their expressive form or technical character Given the advancements in AI such inferences are no longer legitimate What is more these shortcomings may eventually lead to granting copyright or patent protection where none is lawfully permitted or sufficiently justified To remedy the situation this book offers doctrinal and conceptual amendments and proposes law reforms to implement them This book guides authorities practitioners and students through the main arguments of the debate concerning copyright and patents for objects entirely or partly generated by AI It also makes original contributions to advance the ongoing academic and policy debates on AI and intellectual property law   **Artificial Intelligence and the Media** Pihlajarinne, Taina,Alén-Savikko, Anette,2022-02-22 This timely book

Kiefer,N. Ruwet,2012-12-06 The present volume is intended to give an overall picture of research in pro gress in the field of generative grammar in various parts of Europe The term generative grammar must however be understood here rather broadly What seemed to be an easily definable technical term several years ago is becoming more and more vague and imprecise Research in generative gram mar is carried on according to rather diversified methodological principles and being a generative grammarian is often more a matter of confession than any adherence to the common line of methodology which can be traced back to the conception of grammatical description initiated by Noam Chomsky The direct or indirect influence of this conception is however clearly recog nizable in most of the papers of this volume The most difficult thing was naturally enough to select appropriate papers in the realm of semantics Apart from the special trend in generative grammar referred to as generative semantics though here too we might ponder on what generative really means the term generative is hardly employed in semantics The search for semantic primes the application of the methods of mathematical logic the inquiry into the intricate relationships between syntax and semantics and the utilization of syntactic information in semantics are perhaps the most charac teristic traits of contemporary semantics All of this of course is at no variance with the principles of generative grammar on the contrary most of it has been made possible through the achievements of generative grammar **Research Handbook on the Law of Artificial Intelligence** Woodrow Barfield,Ugo Pagallo,2018-12-28 The field of artificial intelligence AI has made tremendous advances in the last two decades but as smart as AI is now it is getting smarter and becoming more autonomous This raises a host of challenges to current legal doctrine including whether AI algorithms should count as speech whether AI should be regulated under antitrust and criminal law statutes and whether AI should be considered as an agent under agency law or be held responsible for injuries under tort law This book contains chapters from US and international law scholars on the role of law in an age of increasingly smart AI addressing these and other issues that are critical to the evolution of the field   **The Exponential Era** David Espindola,Michael W. of AI and Copyright addresses AI and copyright issues with a legal and economic analysis It analyzes the effects of AI on law and economic policy and further makes policy recommendations Covering topics such as copyright infringement deepfakes and public policy this book is an excellent resource for policymakers economists business leaders academicians researchers and more   **Making Art With Generative AI Tools** Hai-Jew, Shalin,2024-04-01 In the dynamic realm of generative artificial Intelligence AI the fusion of human creativity and machine intelligence has created a vibrant ecosystem of collaborative artmaking However this transformative process brings forth a myriad of concerns ranging from ethical considerations and the need for originality to navigating the legal complexities surrounding intellectual property As more and more online communities appear around the use of AI to aid in the creation of images there arises a pressing need for a comprehensive guide that not only dissects the intricacies of artmaking with generative AI tools but also offers practical solutions to the evolving dilemmas faced by artists researchers and technologists Making Art With Generative AI Tools emerges as an exploration of the challenges posed by this intersection of human expression and artificial intelligence Artists engaging with generative AI find themselves grappling with issues of authenticity social toxicity and the commercial viability of their creations From avoiding stereotypical visuals to ensuring proper crediting the realm of generative AI is rife with these complexities Furthermore the blurred lines between human and machine authorship necessitate a deeper exploration of how these innovative tools impact creativity representation and the very fabric of the art world
