Kostecki,1990-09-19 These three volumes provide valuable information to help bring rational and scientifically feasible solutions to petroleum contaminated soils State of the art information on both technical and regulatory issues is covered including environmental fate health effects risk assessment and remedial alternatives They show why petroleum contaminated soils are a problem and propose solutions for that problem These books are an excellent reference for regulatory personnel and environmental consultants at all levels *Remediation Manual for Petroleum Contaminated Sites* David L. Russell,1992-11-23 Based on proven investigation into cleanup techniques the material in this manual gives engineers a working knowledge of the field and a basis for making key decisions during the cleanup process It is easy to get petroleum into the ground but hard to get it back out again The problem does not exist in the groundwater or the soil alone but in a dynamic balance between the soil water and air in the soil Gasoline and any of its volatile components can and do move between the soil air and water and they cost billions of dollars every year in contamination cleanup This new book provides the information needed for cost and time effective petroleum contaminated site cleanup Originally developed as an oil company s training aid this book discusses the hows and whys of site cleanup geology data gathering cleanup alternatives remediation costs and management of consultants contractors Plus the book contains a critical examination of the benefits and limitations of each type of remediation technology There is never only one way to clean up a particular site The choice of the method of cleanup is one of the greatest factors affecting the cost Another important cost factor is the level of cleanup required to satisfy the regulatory cleanup community This new book will not only provide a fundamental understanding of site remediation techniques but also the knowledge to make cost effective environmentally sound choices during the remediation process Copies of this handy manual are available for immediate delivery An order form follows the detailed table of contents on the reverse *Applying Ozone to Accelerate Remediation of Petroleum-contaminated Soils* Tengfei Chen,2018 Petroleum contamination is ubiquitous during extraction transportation refining and storage Contamination damages the soil s ecosystem function reduces its aesthetics and poses a potential threat to human beings The overall goals of this dissertation are to advance understanding of the mechanisms behind ozonation of petroleum contaminated soil and to configure an effective integrated bioremediation and ozonation remedial strategy to remove the overall organic carbon Using a soil column I conducted batch ozonation experiments for different soils and at different moisture levels I measured multiple parameters e g total petroleum hydrocarbons TPH and dissolved organic carbon DOC to build a full understanding of the data that led to the solid conclusions I first demonstrated the feasibility of using ozone to attack heavy petroleum hydrocarbons in soil settings I identified the physical and chemical hurdles e g moisture mass transfer pH needed to be overcome to make the integration of chemical oxidation and biodegradation more efficient and defines the mechanisms behind the experimental observations Next I completed a total carbon balance which

revealed that multiple components including soil organic matter SOM and non TPH petroleum competed for ozone although TPH was relatively more reactive Further experiments showed that poor soil mixing and high soil moisture content hindered mass transfer of ozone to react with the TPH Finally I pursued the theme of optimizing the integration of ozonation and biodegradation through a multi stage strategy I conducted multi stages of ozonation and bioremediation for two benchmark soils with distinctly different oils to test if and how much ozonation enhanced biodegradation and vice versa With pH and moisture optimized for each step pre ozonation versus post ozonation was assessed for TPH removal and mineralization Multi cycle treatment was able to achieve the TPH regulatory standard when biodegradation alone could not Ozonation did not directly enhance the biodegradation rate of TPH instead ozone converted TPH into DOC that was biodegraded and mineralized The major take home lesson from my studies is that multi stage ozonation and biodegradation is a useful remediation tool for petroleum contamination in soil
