Reproduction Growth And Development Of Two Species Of Cloud Forest Peromyscus From Southern Mexico:

Reproduction, Growth and Development in Two Species of Cloud Forest Peromyscus from Southern Mexico Eric A. Rickart, 1971 **Reproduction, Growth and Development in Two Species of Cloud Forest Peromyscus from Southern Mexico** Eric A. Rickart, 1977 *Reproduction, Growth and Development in Two Species of Cloud Forest Peromyscus From Southern Mexico (Classic Reprint)* Eric A. Rickart, 2017-02-20 Excerpt from *Reproduction Growth and Development in Two Species of Cloud Forest Peromyscus From Southern Mexico* An examination of data for 16 members of the genus indicates that litter weight expressed as a percentage of adult weight shows a strong negative correlation with adult body weight This suggests a decrease in reproductive effort with increase in body size which may secondarily be related to habitat stability About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Advances in the Study of Peromyscus (Rodentia)* Gordon L. Kirkland, James Nathaniel Layne, 1989 A collection of six long review papers on systematics and evolution adaptive physiology reproduction and development population biology social behavior and a survey of some 400 papers dealing with the patterns of similarity in ecological equivalents in *Peromyscus* and *Apodemus* Good natural history but unindexed Paper edition unseen 22 Annotation copyrighted by Book News Inc Portland OR Mammals of Mexico Gerardo Ceballos, 2014-01-15 The most comprehensive reference on Mexico's diverse mammalian fauna *Mammals of Mexico* is the first reference book in English on the more than 500 types of mammal species found in the diverse Mexican habitats which range from the Sonoran Desert to the Chiapas cloud forests The authoritative species accounts are written by a Who's Who of experts compiled by famed mammalogist and conservationist Gerardo Ceballos Ten years in the making *Mammals of Mexico* covers everything from obscure rodents to whales bats primates and wolves It is thoroughly illustrated with color photographs and meticulous artistic renderings as well as range maps for each species Introductory chapters discuss biogeography conservation and evolution The final section of the book illustrates the skulls jaws and tracks of Mexico's mammals This unparalleled collection of scientific information on and photographs of Mexican wildlife belongs on the shelf of every mammalogist in public and academic libraries and in the hands of anyone curious about Mexico and its wildlife *Asdell's Patterns of Mammalian Reproduction* Virginia Douglass Hayssen, Ari Van Tienhoven, Ans Van Tienhoven, 1993 Since the appearance of the second edition of Sydney A Asdell's widely used *Patterns of Mammalian Reproduction* in 1964 the field of reproductive physiology has expanded dramatically Accordingly this revision adopts a different structure from previous editions substituting

empirical delineations for physiological interpretations With the emphases now on a presentation of the published facts of mammalian reproduction it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species To gather information the authors examined more than 20 000 publications dating up to 1992 They used primary sources as much as possible supplementing them with English translations of Russian Finnish Chinese and Japanese journals The data are presented in taxonomic order Each familial account summarizes the pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology reproductive anatomy and reproductive physiology of the family Following each account is a tabular listing of species specific data for neonatal mass and size weaning mass and size litter size age at sexual maturity estrous cycle length gestation length lactation length number of litters per year and seasonality of reproduction For each of these reproductive variables the range of data gleaned from the literature is given together with the source of each value listed Virginia Hayssen is Assistant Professor of Biology at Smith College Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University Ans Van Tienhoven assisted in the compilation of data for the book

An Annotated Bibliography on Rodent Research in Latin America, 1960-1985 G. Clay Mitchell, 1989-01-01

Evolution Of Life Histories Derek Roff, 1993-04-30 There are many different types of organisms in the world they differ in size physiology appearance and life history The challenge for evolutionary biology is to explain how such diversity arises The Evolution of Life Histories does this by showing that natural selection is the principal underlying force molding life history variation The book describes in particular the ways in which variation can be analyzed and predicted It covers both the genetic and optimization approaches to life history analysis and gives an overview of the general framework of life history theory and the mathematical tools by which predictions can be made and tested Factors affecting the age schedule of birth and death and the costs of reproduction are discussed The Evolution of Life Histories concentrates on those theoretical developments that have been tested experimentally It will interest both students and professionals in evolution evolutionary ecology mathematical and theoretical biology and zoology and entomology

Monogamy Ulrich H. Reichard, Christophe Boesch, 2003-09-11 Why do males of some species live with a single mate when they are capable of fertilizing more than one female's eggs Why do some females pair only with one male and not with several partners Why do birds usually live in pairs and feed chicks together whilst mammals often live in larger groups with females rearing their young without male help These questions form the central theme of this book Social monogamy is a complex multi faceted phenomenon that does not always correspond with reproductive monogamy so a paired male may not necessarily be raising his own offspring Exploring the variables influencing and maintaining the fascinating diversity of social sexual and reproductive monogamous partnerships in birds mammals and humans this book provides clues to the biological roots of monogamy for students and researchers in behavioural ecology evolutionary anthropology primatology zoology and ornithology
