dilemmas A woman may carry a foetus derived from gametes neither or only one of which came from her or her partner or she may carry a foetus created using in vitro fertilisation IVF with the purpose of handing it to two other parents one neither or both of whom may be genetically related to the prospective child Parents may consist of single sex couples only one of them genetically related to the child the prospective mother may be past her menopause and genetic parenthood after death is now achievable In a world increasingly reliant on medical science how can the argument that equates traditional with natural and novel with unnatural unethical be justified Should there be legislation which is notoriously slow to change in a field driven by dazzling new possibilities at ever faster rate particularly when restrictions differ from country to country so that those who can afford it travel elsewhere for their treatment of choice Whose rights are paramount the adults hoping to build a family or the prospective child ren s future well being On what basis can apparently competing rights be regulated or adjudicated and how and to what extent can these be enforced in practice

Ethics, Reproduction and Genetic Control Ruth Chadwick, 2006-12-05 In this revised edition with a new preface from the editor leading scientists explain the nature and goals of test tube reproduction and genetic engineering and their eugenic implications In contrast to the Warnock report the extended commentary considers the issues in the context of a social ethic rather than the individualist viewpoint

Inconceivable Conceptions Jane Haynes, Juliet Miller, 2004-03 It is over two decades since the first test tube baby was born During this period a new belief that all infertile women can now have babies has become widely accepted indeed infertile couples may feel great pressure to seek a medical solution However the psychological and social effects of the changing experiences of infertility remain confusing both for those who experience infertility and for wider society In this book a distinguished range of contributors including novelist Hilary Mantel and Germaine Greer examine the experience of infertility from both male and female perspectives the psychological aspects of infertility diagnosis and treatment and the often radical and unexpected effects on kinship Drawing from a wide range of theoretical backgrounds including Jungian analytical and compelling personal reflections this book aims to unravel the implications of advancing reproductive technology for our understanding of ourselves and our families

Making Babies: Biomedical Technologies, Reproductive Ethics, and Public Policy Inmaculada de Melo-Martín, 2013-03-09 Each year roughly a million new cases of cancer appear in the US and more than 500 000 Americans die annually of premature death Although medical progress has slowed cancer mortality its incidence is increasing roughly six times faster than cancer mortality is decreasing Breast cancer in particular has been increasing about one percent each year since 1973 At least two of the factors responsible for this surge in breast cancer are women's use of medically prescribed synthetic hormones and the exposure of the entire population to chemicals such as dioxin Both exposures increase the likelihood of breast cancer Although many ethicists worry about involuntary societal imposition of chemicals such as dioxin through industrial and agricultural processes allegedly voluntary exposures also constitute both a public health problem and a biomedical ethics difficulty Physicians recommend synthetic hormones for example to women who apparently take them voluntarily In the case of in vitro fertilization doctors prescribe hormones to induce egg production and to increase the chances of reproduction for couples who are unable to have children Despite the benefits of medical technologies such as hormone stimulation and in vitro fertilization they also carry great risks The price that childless women pay for their opportunity to have children through in vitro fertilization may be their own increased risk of diseases such as breast cancer that are hormone dependent

Anamarija Batista, Viola Franziska Müller, Corinna Peres, 2023-12-07 *Coercion and Wage Labour* presents novel histories of people who experienced physical social political or cultural compulsion in the course of paid work Broad in scope the chapters examine diverse areas of work including textile production war industries civil service and domestic labour in contexts from the Middle Ages to the present day They demonstrate that wages have consistently shaped working people s experiences and failed to protect workers from coercion Instead wages emerge as versatile tools to bind control and exploit workers Remuneration mirrors the distribution of power in labour relations often separating employers physically and emotionally from their employees and disguising coercion The book makes historical narratives accessible for interdisciplinary audiences Most chapters are preceded by illustrations by artists invited to visually conceptualise the book s key messages and to emphasise the presence of the body and landscape in the realm of work In turn the chapter texts reflect back on the artworks creating an intense intermedial dialogue that offers mutually relational translations and narrations of labour coercion Other contributions written by art scholars discuss how coercion in remunerated labour is constructed and reflected in artistic practice The collection serves as an innovative and creative tool for teaching and raises awareness that narrating history is always contingent on the medium chosen and its inherent constraints and possibilities Praise for *Coercion and Wage Labour* *Coercion and Wage Labour* is a pioneering volume It makes a well founded break with the widespread misconception that wage labour is by definition free from coercion The fourteen historical case studies lead to the conclusion that wage labourers too were subject to many forms of coercion and that usually their freedom was and is only relative But something else makes this book special throughout the text there are artistic illustrations that enter into a dialogue with the individual chapters which in turn reflect on the images This creates an inspiring interaction that complements the volume s interdisciplinary nature Marcel van der Linden International Institute of Social History Amsterdam **Anarchism & Sexuality** Jamie Heckert, Richard Cleminson, 2011-10-20 *Anarchism between sexual desires*

categorised as heterosexual or homosexual between seemingly mutually exclusive activism and scholarship between forms of expression such as poetry and prose and between disciplinary categories of knowledge Anarchism to make a queer and feminist intervention within the most recent wave of anarchist scholarship and to make a queerly anarchist contribution to social justice literature policy and practice By mingling prose and poetry theory and autobiography it constitutes a gathering place to explore the interplay between sexual and social transformation This book will be of use to those interested in anarchist movements cultural studies critical legal theory gender studies and queer and sexuality studies Marx: Key Concepts Riccardo Bellofiore, Tommaso Redolfi Riva, 2024-01-18 This scholarly book conducts an extensive exploration into the central ideas of Karl Marx focussing on the key concepts that have defined his thought and legacy Bringing together a wealth of internationally renowned contributors across different generations Marx Key Concepts analyses in depth Marx's theories of surplus value money and capital and their reception in classical and contemporary economic sociological and philosophical debates
