Reproductive Strategies in a Tropical Anuran Community Martha L. Crump, 1974 Reproductive Strategies in a Tropical Anuran Community/ by Martha L. Crump Martha L. Crump, 1970 Reproductive Strategies in a Tropical Anuran Community (Classic Reprint) Martha L. Crump, 2017-04-24 Excerpt from Reproductive Strategies in a Tropical Anuran Community Fig 2 Monthly mean minimum and maximum ambient air temperatures and monthly rainfall accumulation for the period July 1971-june 1972 About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Reproductive Biology and Phylogeny of Anura B G M Jamieson, 2003-01-08 This book covers the major aspects of phylogeny and reproductive biology of frogs in chapters written by major authorities Topics treated are anuran phylogeny classification and reproductive modes gross anatomy of the reproductive system oogenesis endocrinology of reproduction spermatogenesis and the mature spermatozoon breeding glands etc **Foundations of Tropical Forest Biology** Robin L. Chazdon, T. C. Whitmore, 2002 This book presents a timely collection of pioneering work in the study of these diverse and fascinating ecosystems It consists of facsimiles of papers chosen by world experts in tropical biology as the classics in the field *The Reproductive Biology of Amphibians* D. Taylor, 2013-06-29 *Parental Care: Evolution, Mechanisms, And Adaptive Significance*, 1996-11-18 *Advances in the Study of Behavior* presents its first thematic volume focusing on the physiological and behavioral mechanisms underlying parental care The book discusses parental care both within and across taxa with coverage of invertebrates and early vertebrates fishes amphibians reptiles mammals birds and nonhuman primates A running theme throughout the chapters shows that parental care is anchored to the ecology reproductive physiology and embryonic development of a species Coverage also includes mechanisms of parental care including analysis of the stimuli that parents respond to and how parental care is initiated maintained and terminated Individual differences within species are also explored examining stable differences in maternal style how they arise and the consequences for both mother and infant **Reproductive Biology of South American Vertebrates** William C. Hamlett, 2012-12-06 South America is one of the few areas of the world that includes vast areas of as yet undisturbed natural habitats These areas are home to as many as half the world's species of plants and animals Many of the animals inhabiting these areas are of direct and immediate economic importance while others are of unknown potential value With economic development of these areas there is a coincident disruption of natural habitats that have a direct impact on the reproductive capabilities of the affected species Reproduction is central to the survival of all

species and regardless of the environmental stresses imposed on them scientific attention must be focused on reproductive biology as a way to deal with these pressures It is vitally important to gather as much research data as possible on the reproductive biology of the species on this continent in order to provide governmental agencies and scientists with the most accurate information on which to base decisions regarding development This volume is intended to draw attention to these pressing matters by gathering a wide representation of scientists actively engaged in reproduction research relating to South American vertebrates It is intended that this volume will serve as a resource for individuals and organizations interested in reproductive biology and species survival An additional benefit is that economically important species as well as potentially important ones such as sharks will be discussed **Herpetological Communities** Norman J. Scott,1982

Reproductive Technologies and Biobanking for the Conservation of Amphibians Aimee J. Silla,Andy J. Kouba,Harold Heatwole,2022-10-03 How to decelerate loss of global biodiversity is one of the greatest challenges of our generation Reproductive technologies have enormous potential to assist the recovery of species by enhancing reproductive output facilitating genetic management and supporting reintroduction of threatened species Of particular value are cryopreservation technologies coupled with the establishment of global gene banks to conserve in perpetuity the remaining extant genetic diversity of threatened amphibians Reproductive Technologies and Biobanking for the Conservation of Amphibians brings together leading experts in the field to provide a comprehensive overview of current best practices summarise technological advancements and present a framework for facilitating the integration of reproductive technologies and biobanking into conservation breeding programs for threatened amphibians It is an invaluable reference for the next generation of conservation practitioners captive breeding facilities researchers and policy makers involved with biodiversity conservation **Wildlife Review** ,1993 **Potential Impacts of Climate Change on Tropical Forest Ecosystems**

Adam Markham,2013-11-11 Climate change represents one of the most alarming long term threats to ecosystems the world over This new collection of papers provides for the first time an overview of the potentially serious impact that climate change may have on tropical forests The authors a multi disciplinary group of leading experts in climatology forestry ecology and conservation biology present a state of knowledge snapshot of how tropical forests are likely to react to the changes being wrought on our planet s atmosphere and climate Tropical forests represent extraordinary harbours for biological diversity and yet as deforestation and degradation continue apace they are under greater pressure from human impacts than ever before Climate change adds yet another threat to these valuable ecosystems and this volume demonstrates just how significant a problem this may really be The authors identify certain types of forest including tropical montane cloud forest that may be particularly vulnerable They also show the strong likelihood of global warming aggravating problems in already fragmented forest areas Extinction in Our Times James P. Collins,Martha L. Crump,2009-07-07 For over 350 million years thousands of species of amphibians have lived on earth but since the 1990s they have been disappearing at an alarming rate

in many cases quite suddenly and mysteriously What is causing these extinctions What role do human actions play in them What do they tell us about the overall state of biodiversity on the planet In *Extinction in Our Times* James Collins and Martha Crump explore these pressing questions and many others as they document the first modern extinction event across an entire vertebrate class using global examples that range from the Sierra Nevada of California to the rainforests of Costa Rica and the Mediterranean coast of North Africa Joining scientific rigor and vivid storytelling this book is the first to use amphibian decline as a lens through which to see more clearly the larger story of climate change conservation of biodiversity and a host of profoundly important ecological evolutionary ethical philosophical and sociological issues Vertebrate Biology Donald W. Linzey, 2012-02-13 Arranged logically to follow the typical course format *Vertebrate Biology* leaves students with a full understanding of the unique structure function and living patterns of the subphylum that includes our own species

Infanticide Glenn Hausfater, Sarah Blaffer Hrdy, 2017-07-12 Recent field studies of a variety of mammalian species reveal a surprisingly high frequency of infanticide the killing of unweaned or otherwise maternally dependent offspring Similarly studies of birds fish amphibians and invertebrates demonstrate egg and larval mortality in these species a phenomenon directly analogous to infanticide in mammals In this collection Hausfater and Hrdy draw together work on animal and human infanticide and place these studies in a broad evolutionary and comparative perspective *Infanticide* presents the theoretical background and taxonomic distribution of infanticide infanticide in nonhuman primates infanticide in rodents and infanticide in humans It examines closely sex allocation and sex ratio theory surveys the phylogeny of mammalian interbirth intervals and reviews data on sources of egg and larval mortality in a variety of invertebrate and lower vertebrate species *Dealing with infanticide in nonhuman primates* two chapters critically examine data on infanticide in langurs and its broader theoretical implications By reviewing sources of infant mortality in populations of small mammals and new laboratory analyses of the causes and consequences of infanticide this work explores such issues as the ontogeny of infanticide proximate cues of infants and females which elicit infanticidal behavior in males the genetical basis of infanticide and the hormonal determinants Hausfater and Sarah Blaffer Hrdy through their selection of materials for this book evaluate the frequency causes and function of infanticide Historical ethnographic and recent data on infanticide are surveyed *Infanticide* summarizes current research on the evolutionary origins and proximate causation of infanticide in animals and man As such it will be indispensable reading for anthropologists and behavioral biologists as well as ecologists psychologists demographers and epidemiologists *An Introduction to the Amphibians of Ecuador* Luis A. Coloma, William E. Duellman, 2024-12-27 *An Introduction to the Amphibians of Ecuador* is the first of four volumes which are comprehensive well illustrated and authoritative works making them invaluable to biologists conservationists and others This initial volume delves into the cultural history of amphibians encompassing ethnobatrachology and folklore while summarizing the amphibian iconography found in Ecuadorian archaeology Moreover it covers topics such as bioprospecting sustainable

management and biotrade activities The history and present state of amphibian biology research are also addressed Furthermore it explores in comprehensive detail the rich amphibian diversity of Ecuador providing a thorough review of biogeography amphibian declines and conservation Subsequent volumes list the characteristics of each species define each taxon and compare them to similar other species Natural history and reproductive behavior where known are described as are data on vocalizations larvae and ontogenetic changes Amphibian distributions are illustrated with physiographic maps with dots Each volume addresses the declines extinctions and conservation status of each species and provides notations of their occurrence in reserves KEY FEATURES Summarizes the ethnozoological aspects of amphibians Provides a thorough history of research Introduction to three volumes providing accounts for each of the 3 orders 19 families 78 genera and over 650 species from Ecuador *Alternative Life-History Styles of Animals* Michael N.
