Reproductive Immunology 1986:

Reproductive Immunology 1986 David Alexander Clark, B. Anne Croy, 1986 **Immunology of Pregnancy and its Disorders** C.M. Stern, 2012-12-06 The purpose of this book is to describe the nature of the materno fetal immunobiological relationship and to suggest the direction in which the management of reproduction and its failure in man is moving The several authors who have written about their special fields of interest need to be read within a framework designed to blend their contributions into a whole This preamble provides a part of that framework by describing the early development of the embryo that of the placenta and its membranes and their anatomical relationship with maternal tissues in other words the stage upon which this materno fetal dialogue takes place Professor Maureen Young's tour de force encapsulating the whole of fetal physiology into a single chapter completes the background information After Maureen Young's summary of fetal physiology Matteo Adinolfi describes the development of the immune system in the fetus including new information that allows more accurate speculation concerning the gestational age at which fetal immune responses of various kinds may begin Charles Loke examines the nature of antigens which are found in the placenta concentrating on those which occur on syncytiotrophoblast and suggesting roles for them in fetal development Arnold Klopfer covers the wide range of proteins and hormones which have been studied during pregnancy and found to vary in a potentially significant way He has been careful to distinguish between observation and hypothesis as far as any immunomodulating action is concerned and his analysis is a model of scientific scepticism **The Immunology of the Fetus** Gerard Chaouat, 2020-04-28 First published in 1989 this book provides information on the diagnosis and treatment of neonatal immunodeficiencies It includes a survey on the riddle of the fetal allograft Also discussed in the text are Ontogeny immunological aspects of differentiation and treatment of spontaneous abortion This book is useful to predoctoral students researchers in obstetrics animal husbandry and reproductive immunology **Issues in Reproductive Technology** Helen B. Holmes, 1994-08 A remarkable collection of scholarly essays philosophical discussions and ethical arguments concerning reproductive choices Choice It seems as if every week there is a new case involving reproductive technologies that raises provocative often painful questions What policies should be followed by centers that preserve human embryos Are such innovations as Norplant improvements over established methods of contraception Should RU 486 be available in the U S Is prenatal diagnosis an ethically acceptable step to limiting the number of disabled people These are just some of the vital questions explored in this timely work which offers incisive analysis of the plethora of issues raised by advances in reproductive medicine The book's major sections cover abortion contraception cryopreservation of gametes and embryos surrogate motherhood and psychosocial issues of in vitro fertilization In each section introductory essays by recognized authorities such as Elizabeth Bartholet and Andrea L. Bonnickson are followed by critical articles by professionals in such fields as women's health medicine biology sociology politics and philosophy In assessing a technology the authors present well argued analyses of problems created by that

technology including views from advocates and practitioners that raise attendant ethical and practical issues **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), Early Pregnancy Loss Richard W. Beard, Frank Sharp, 2012-12-06 The first few months of any pregnancy are of supreme importance to the success of that pregnancy This statement is so obvious as to be almost a platitude yet it must be said that no aspect of pregnancy has been more neglected in the human than the first three months Little is known of the morphological changes that occur at that time and our knowledge of the mechanisms that control this vital stage of pregnancy is almost non-existent The explanation for this neglect of what is an obvious area for study is the difficulty of obtaining normal material It is rare to have material to study from a healthy first trimester pregnancy and the study by Hertig and Rock of early conception found by chance in hysterectomy specimens must be unique The information that we do have about early pregnancy is mostly gained from animal studies or single miscarriages in humans Chromosomal defects are common but are not an explanation for the majority of recurrent miscarriages Obstetricians have hypothesised many causes for this condition and have developed numerous methods for treating it but the studies have been poorly controlled so that our understanding of the causes has not advanced Treatment of women with a history of recurrent miscarriage by paternal leukocyte infusion immunotherapy may be yet another form of treatment that is hailed as a new advance only to be rejected when subject to rigorous testing

Immunology of Pregnancy and Its Disorders C. M. M. Stern, 1989 **ILAR News**, 1983 *Foreign assistance and related programs appropriations for 1986* United States. Congress. House. Committee on Appropriations. Subcommittee on Foreign Operations and Related Agencies (1981-1987), United States. Congress. House. Committee on Appropriations. Subcommittee on Foreign Operations and Related Programs, 1985 **Contraception Research for Today and the Nineties** G.P. Talwar, 2012-12-06 The twentieth century will close with 5 billion people added to the current global population Between 1980 and the year 2000 the total world population will increase from 4 billion to a little over 6 billion There will be half as many more people on earth during these 20 years than the number accumulated since the origin of man to 1980 Overpopulation is particularly acute in economically developing countries where contraception has become a social necessity Contraception Research for Today and the Nineties carries the proceedings of an international symposium convened in New Delhi in October 1986 to review the status of current research in contraception Major organizations supporting basic and applied research in contraception The Population Council World Health Organization WHO The Rockefeller Foundation United States Agency for International Development USAID International Development Research Center of Canada IDRC National Institutes of Health NIH and the Indian Council of Medical Research ICMR were represented by the heads of divisions who projected respective programs and strategies Principal scientists responsible for many of the new leads participated Control of Uterine Contractility Robert E. Garfield, Thomas N. Tabb, 2019-06-12

Published in 1994 The Editors have outlines many advances in the field of uterine physiology in hopes of furthering the science

The High-Risk Fetus Chin-Chu Lin, Marion Verp, Rudy E. Sabbagha, 2012-12-06 Here is a practical comprehensive text on fetal diagnosis management and therapy which differs from competing texts in maternal fetal medicine by focusing on the fetus rather than the pregnant woman All new technologies in the field from ultrasound diagnosis to intrauterine treatment are placed in perspective for the practicing physician

Implantation Michael G. Chapman, J. Geddis Grudzinskas, Tim Chard, 2013-03-14 The advent of assisted conception procedures such as in vitro fertilisation IVF has provided the impetus for exploration of the factors that lead to the establishment of pregnancy This collection of papers from leading research workers brings together current concepts of the processes which may be of importance in implantation The complex signals from the embryo to the ovary endometrium and myometrium are now being revealed through studies in both primates and other mammalian species This book addresses the interrelationship of pituitary and ovarian hormones in controlling ovulation and the preparation of the intrauterine environment for implantation Once fertilisation has occurred and trophoblast has formed the next vital step is the production of materials which signal the presence of the pregnancy to the rest of the body Trophoblastic proteins and other early pregnancy factors are prime candidates for this role Recent studies have emphasised the importance of the intrauterine environment in implantation Specific secretory products of the endometrium have great potential in this process The prostaglandins also play an essential part Immunological adjustments are now considered a condition for the successful establishment of pregnancy The possible use of immuno therapy in the treatment of recurrent abortion has highlighted interest in this area The use of immunological techniques for contraception are in their infancy but offer much hope for the future

Immunotherapy of Disease T.J. Hamblin, 2012-12-06 Immunotherapy began in 1774 when the Dorset farmer Benjamin Jesty inoculated his wife and two sons with the pus from the teat of a cow suffering from cow pox using his wife s knitting needle as a vaccinating implement It has made slow progress Meanwhile the science of Immunology has burgeoned so much that if all immunologists read every page of the Journal of Immunology let alone the other Immunology journals then they would have no time left to write for it I am pleased that some of them have found the time to write for this volume In spite of the rapid expansion in immuno logical knowledge and the undreamt of complexity of the immune system that has been unravelled immunologists have remained until recently erudite but therapeutically effete Indeed anyone purporting to treat disease by immuno logical methods has been in danger of being labelled a quack or a crackpot Happily things are changing The nine chapters of this volume detail nine quite different approaches to manipulating the immune system for therapeutic benefit All are experimental and they have been attended with greater or lesser degrees of success In some cases their main effect has been to elucidate the complexity of the problem On the other hand there are people alive and well today as a result of these approaches who would otherwise have perished Immunotherapy is here to stay and it can only get better

Bibliography of the History of

Medicine , Cumulated Index Medicus ,1989 **New Serial Titles** ,1986 A union list of serials commencing publication after Dec 31 1949 *The Mammalian Egg Coat* Johannes Dietl,2012-12-06 Publication of this monograph acknowledges great strides made in research on the zona pellucida during the past decade or so The body of work presented testifies to a resurgence of interest in the zona pellucida prompted largely by a renewed appreciation of its unique properties and its important functions during early mammalian development It is gratifying to realize that the zona pellucida has at last achieved a well deserved attention Whereas extracellular coats of nonmammalian eggs have been studied intensively for many years the zona pellucida by comparison has until now taken a back seat Fortunately the research presented here signals an end to this situation Many of the difficulties inherent in working with relatively small amounts of material have been overcome paving the way for application of a wider variety of experimental approaches to the zona pellucida by a larger community of investigators Hopefully this monograph will serve as a catalyst in this regard As revealed in these pages application of contemporary experimental methodologies has had significant impact on both pure and applied research on the zona pellucida For example modern immunological approaches have been used to assess molecular features of zona pellucida structure and function as well as to evaluate the zona pellucida as a potential contraceptive target antigen

Frontiers in Gynecologic and Obstetric Investigation A.R. Genazzani,F. Petraglia,1993-01-15 This volume provides a review of the recent advances that have been made in gynaecological and obstetric investigation and considers their clinical applications as well as their diagnostic and therapeutic implications
