Object-oriented Software for Manufacturing Systems S. Adiga,2012-12-06 I must confess that I stumbled upon the object oriented OO world view during my explorations into the world of artificial intelligence AI in search of a new solution to the problem of building computer integrated manufacturing systems CIM In OO computing I found the constructs to model the manufacturing enterprise in terms of information a resource that is common to all activities in an organization It offered a level of modularity and the coupling binding necessary for fostering integration without placing undue restrictions on what the individual applications can do The implications of OO computing are more extensive than just being a vehicle for manufacturing applications Leaders in the field such as Brad Cox see it introducing a paradigm shift that will change our world gradually but as radically as the Industrial Revolution changed manufacturing However it must be borne in mind that simply using an object oriented language or environment does not in itself ensure success in one s applications It requires a different way of thinking design discipline techniques and tools to exploit what the technology has to offer In other words it calls for a paradigm shift as defined by Kuhn in The Structure of Scientific Revolution a classic text in the history of science

, *Questions and Information Systems* Thomas W. Lauer,Eileen Peacock,Arthur C. Graesser,2013-04-15 The design and functioning of an information system improve to the extent that the system can handle the questions people ask Surprisingly however researchers in the cognitive computer and information sciences have not thoroughly examined the multitude of relationships between information systems and questions both question asking and answering The purpose of this book is to explicitly examine these relationships Chapter contributors believe that questions play a central role in the analysis design and use of different kinds of natural or artificial information systems such as human cognition social interaction communication networks and intelligent tutoring systems Their efforts show that data structures and representations need to be organized around the questioning mechanisms in order to achieve a quick retrieval of relevant useful information
