**Women's Education in Developing Countries** Elizabeth M. King, M. Anne Hill, 1997-07-01 Why do women in most developing countries lag behind men in literacy? Why do women get less schooling than men? This anthology examines the educational decisions that deprive women of an equal education. It assembles the most up-to-date data organized by region. Each paper links the data with other measures of economic and social development. This approach helps explain the effects different levels of education have on women's fertility, mortality rates, life expectancy, and income. Also described are the effects of women's education on family welfare. The authors look at family size and women's labor status and earnings. They examine child and maternal health as well as investments in children's education. Their investigation demonstrates that women with a better education enjoy greater economic growth and provide a more nurturing family life. It suggests that when a country denies women an equal education, the nation's welfare suffers. Current strategies used to improve schooling for girls and women are examined in detail. The authors suggest an ambitious agenda for educating women. It seeks to close the gender gap by the next century. Published for The World Bank by The Johns Hopkins University Press **Chinese Research Perspectives on Population and Labor, Volume 5** Fang Cai, Juwei Zhang, 2019-05-27 This translation of selections from Reports on China's Population and Labor No. 17 allows readers to take stock of what China has done to tackle some of the country's most important demographic and labor-related issues. The volume opens with two articles on the universal two-child policy, one of the most eagerly anticipated and closely watched population policy changes in recent years. These are followed by new population forecasts based on the new policy and an analysis of what they mean for education resource allocation. In addition to familiar topics such as household registration, pension system reform, and income distribution, this volume devotes considerable space to examining challenges facing Chinese women, especially those related to employment and marriage. The Economics of Population Growth Julian Lincoln Simon, 2019-04-23 Comparison with stationary and very fast rates of population growth shows modern population growth to have long-run positive effects on the standards of living. This is Julian Simon's contention, and he provides support for its validity in both more and less developed countries. He notes that since each person constitutes a burden in the short run, whether population growth is judged good or bad depends on the importance the short run is accorded relative to the long run. The author first analyzes empirical data, formulating his conclusions using simulation models. He then reviews our knowledge of the effect of economic level upon population growth. A final section of his book considers the framework of welfare economics and values within which population policy decisions are now made. He finds that the implications of policy decisions can prove inconsistent with the values that prompt their

Yue Wang, 2013-11-12 Human population genetic research HPGR seeks to identify the diversity and variation of the human genome and how human group and individual genetic diversity has developed This book asks whether developing countries are well prepared for the ethical and legal conduct of human population genetic research with specific regard to vulnerable target group protection The book highlights particular issues raised by genetic research on populations as a whole such as the potential harm specific groups may suffer in genetic research and the capacity for current frameworks of Western developed countries to provide adequate protections for these target populations Using The People s Republic of China as a key example Yue Wang argues that since the target groups of HPGR are almost always from isolated and rural areas of developing countries the ethical and legal frameworks for human subject protection need to be reconsidered in order to eliminate or at least reduce the vulnerability of those groups While most discussion in this field focuses on the impact of genetic research on individuals this book breaks new ground in exploring how the interests of target groups are also seriously implicated in genetic work In evaluating current regulations concerning prevention of harm to vulnerable groups the book also puts forward an alternative model for group protection in the context of human population genetic research in developing countries The book will be of great interest to students and academics of medical law ethics and the implications of genetic research **Index of Publications of Bureaus of Business and Economic Research**, 1957 **The**
