Research Progress in Organic, Biological and Medicinal Chemistry Ulisse Gallo, Leonida Santamaria, 1972      *The Science of Photomedicine* J.D. Regan, 2012-12-06 Although the history of photomedicine dates back thousands of years with even preliterate cultures appreciating the healing properties of sunlight for many workers in the discipline photomedicine is associated with the observation about 100 years ago of Niels Finsen a Danish physician Finsen recognized that people with tuberculosis who lived in Norway and who had very little exposure to sunlight often developed facial lesions lupus vulgaris which would decrease and sometimes disappear during the summer months This very observant physician reasoned that artificial light ought to produce the same effect as sunlight and began utilizing the radiation from the newly available carbon arc At first he used a glass lens to concentrate the radiation but since this produced considerable burning he replaced this with a hollow glass lens filled with water However while this reduced the heat burns it did not actually duplicate the effect of direct sunlight Finally using a hollow lens filled with water but equipped with quartz windows Finsen was able to imitate even improve upon the effect of sunlight As a result lupus vulgaris was practically eliminated from the Scandinavian countries      **Radiation Research** Oddvar F. Nygaard, Howard I. Adler, Warren K. Sinclair, 2013-10-22 Radiation Research Biomedical Chemical and Physical Perspectives documents the proceedings of the Fifth International Congress of Radiation Research held in Seattle Washington 14 20 July 1974 While the focus of the Congress was on fundamental research there were several well attended sessions on the practical aspects of radiation research as it relates to radiotherapy central station power generation by both nuclear fission and fusion and the environment This volume contains 126 papers organized into 31 parts Beginning with a keynote address and a lecture on the time scale in radiobiology the subsequent contributions cover a wide range of topics presented over several sessions Topics discussed during these sessions include energy needs nuclear power and the environment prospects for fusion power technological applications of radiation human radiobiology hazards of radiation exposure relative to other environmental agents the basic physics of the interactions of radiation with matter particle penetration phenomena and radiation effects in frozen media      On the interacting visual and non-visual effects Lucia R. Ronchi, 2012      The Science of Photobiology K. C. Smith, 2013-11-11 Although there are several excellent books covering a few of the specialized areas of photobiology at the present time there is no book that covers all areas of the science of photobiology This book attempts to fill this void The science of photobiology is currently divided into 14 subspecialty areas by the American Society for Photobiology The first 14 chapters of this book deal with those subspecialty areas each written by a leader in the field Chapter 15 entitled New Topics in Photobiology highlights areas of research that may be designated subspecialties of photobiology in the future This book has been written as a textbook to introduce the science of photobiology to advanced undergraduate and graduate students The chapters are written to provide a broad overview of each topic They are designed to contain the amount of information that might be presented in a one to two hour

general lecture The references are not meant to be exhaustive but key refer ences are included to give students an entry into the literature Frequently a more recent reference that reviews the literature will be cited rather than the first paper by the author making the original discovery Whenever practical a classroom demonstration or simple laboratory exercise has been provided to exemplify one or more major points in a chapter

**Annual Review of Gerontology and Geriatrics, Volume 10, 1990** Vincent J. Cristofalo, PhD,1990-11-15 This volume presents a clear concise overview of the current state of knowledge about the biology of aging serving as both an invaluable graduate level text and a key reference for practicing professionals Over a dozen distinguished contributors probe the latest developments in our knowledge of why people age and how the process works These authoritative chapters are not just written for biologists but for gerontologists in general Marks the tenth anniversary of the Annual Review of Gerontology and Geriatrics

Current Catalog National Library of Medicine (U.S.),1993-04 **Molecular Mechanisms for Repair of DNA** Philip Hanawalt,2012-12-06 An age has passed in the 40 years since we first observed recovery from radiation damage in irradiated bacteria During the early 1930s we had been discussing the possibility of rapid changes after radiation exposure with Farring ton Daniels Benjamin Duggar John Curtis and others at the University of Wisconsin After working with living cells we had concluded that organisms receiving massive insults must have a wide variety of repair mechanisms available for restoration of at least some of the essential properties of the cell The problem was how to find and identify these recovery phenomena At that time I was working on a problem considered to be of great importance the existence of the so called mitogenetic rays Several hundred articles and a score of books had already appeared dealing with mitogenetic rays a type of radiation that was thought to exist in the shorter ultraviolet region Our search for mitogenetic rays necessitated the design of experiments

of greatest sensitivity for the detection of ultraviolet It was vital that conditions be kept as constant as possible during exposure All the work was done at icewater temperature 3 5 C during and after exposure We knew that light was an important factor for cell recovery so all our experiments were done in dim light with the plated out cells being covered with dark cloth Our statements on the effect of visible light stimulated Kelner to search for photoreactivation as it was later called

Handbook of Laboratory Health and Safety Measures S.B. Pal,2013-03-14 During the past two decades many books governmental reports and regulations on safety measures against chemicals fire microbiological and radioactive hazards in laboratories have been published from various countries These topics have also been briefly discussed in books on laboratory planning and management The application of various scientific instruments based on different ionizing and non ionizing radiations have brought new safety problems to the laboratory workers of today irrespective of their scientific disciplines be they medicine natural or life sciences However no comprehensive laboratory handbook dealing with all these hazards some of which are recently introduced had so far been available in a single volume Therefore it was thought worthwhile to publish this Handbook on safety and health measures for laboratories with contributions from several experts on these subjects As this second edition of the Handbook like the first edition is a multi-author volume some duplication in content among chapters is unavoidable in order to maintain the context of a chapter as well as make each chapter complete An attempt has also been made to maintain the central theme which is how to work in a laboratory with maximum possible environmental safety      Medicinal Chemistry F. L. Boschke,1974-09-30      **Pharmacology of Intestinal Permeation I** ,2012-12-06 The intestine particularly the small bowel represents a large surface in the adult 2 human approximately 200m through which the body is exposed to its environment A vigorous substrate exchange takes place across this large surface nutrients and xenobiotics are absorbed from the lumen into the bloodstream or the lymph and simultaneously the same types of substrate pass back into the lumen The luminal surface of the intestine is lined with a leaky epithelium thus the passage of the substrates in either direction proceeds via both transcellular and intercellular routes Simple and carrier mediated diffusion active transport pinocytosis phagocytosis and persorption are all involved in this passage across the intestinal wall The term intestinal permeation refers to the process of passage of various substances across the gut wall either from the lumen into the blood or lymph or in the opposite direction Permeability is the condition of the gut which governs the rate of this complex two way passage The pharmacologist's interest in the problem of intestinal permeation is twofold on the one hand this process determines the bioavailability of drugs and contributes significantly to the pharmacokinetics and toxicokinetics of xenobiotics on the other hand the pharmacodynamic effects of many drugs are manifested in a significant alteration of the physiological process of intestinal permeation
