Rust, 2018-05-08 Originally published in 1984 This annotated bibliography is a comprehensive record of English language materials which focus on Education in the Federal Republic of Germany FRG and the German Democratic Republic GDR It provides an excellent resource to scholars beginning with a long introductory chapter about the role of education formal and non formal in the two Germanies The socio historical context is presented but also the authors offer discussion of educational research trends The bibliography is structured in useful thematic chapters and within the categories then split into those relating to East and West Germany      Year Book Australia, 1985 Australian Bureau of Statistics, 1984      The European Scientific Community Ros Herman, 1986      **The 5-year Outlook on Science and Technology**, 1981      *China Exchange News*, 1980 A review of education science and academic relations with the PRC      **The Social Direction of the Public Sciences** Stuart Blume, Joske Bunders, Loet Leydesdorff, Richard P. Whitley, 2012-12-06 This volume of the Sociology of the Sciences Yearbooks stems from our experience that collaborations between non scientists and scientists often initiated by scientists seeking greater social relevance for science can be of major importance for cognitive development It seemed to us that it would be useful to explore the conditions under which such collaborations affect scientific change and the nature of the processes involved This book therefore focuses on a number of instances in which scientists and non scientists were jointly involved in the generation of scientific results at the interface of science and society Despite the considerable variety of cases reported here a number of questions are central Under what conditions do such cooperative processes occur What perceptions of social relevance and what sorts of collaborations with non scientific groups are involved How is this collaboration achieved and through what

forums How can insights into its conditions and mechanisms stabilize such cooperations over a longer period of time If they are stabilized do they really affect science or do they mainly function to shield the rest of the science system against external influences These questions are pertinent both to intellectual problems in the sociology of science and to the practical concerns of modern science policies The significance of relations between knowledge producers and knowledge consumers and interest in how these relations affect science and society have changed considerably in recent decades **16th**
