Research Strategies in Historical Archeology Stanley A. South, 1977 *Foreward from Research Strategies in Historical Archeology, Edited by Stanley South* Mark P. Leone, 1977 *Research Strategies in Historical Archaeology* Stanley A. South, 1977 **Advances in Archaeological Method and Theory** Michael B. Schiffer, 2014-06-30 *Advances in Archaeological Method and Theory* Volume 5 presents the progressive explorations in methods and theory in archeology. This book provides information pertinent to the developments in urban archeology. Organized into nine chapters, this volume begins with an overview of cultural resource management developed to assess the significance of and to manage the cultural resources on public lands. This text then explores the basic aspects of natural and human caused changes on the portion of the archaeological resource base consisting of archaeological sites. Other chapters consider the practice of urban archeology in the United States with emphasis on the relationships between human behavior and material culture in an urban setting. This book discusses as well the applications of computer graphics in archeology. The final chapter deals with the types of skeletal and population changes that accompany malnutrition. This book is a valuable resource for anthropologists, archaeologists, urban planners, and graduate students. *Method and Theory in Historical Archeology* Stanley South, 2002-12-31 Described by Lewis Binford in his new foreword as a solid foundation on which to build a vital and growing historical archaeology. Stanley South's famous book on historical archaeology includes a new introduction by the author that discusses how the book came to be written and the evolution of the field. Widely regarded as one of the most influential books in historical archaeology, the book was originally published by Academic Press in 1977. *International Handbook of Historical Archaeology* Teresita Majewski, David Gaimster, 2009-06-07 In studying the past, archaeologists have focused on the material remains of our ancestors. Prehistorians generally have only artifacts to study and rely on the diverse material record for their understanding of past societies and their behavior. Those involved in studying historically documented cultures not only have extensive material remains but also contemporary texts, images, and a range of investigative technologies to enable them to build a broader and more reflexive picture of how past societies, communities, and individuals operated and behaved. Increasingly, historical archaeology refers not to a particular period, place, or a method but rather an approach that interrogates the tensions between artifacts and texts irrespective of context. In short, historical archaeology provides direct evidence for how humans have shaped the world we live in today. Historical archaeology is a branch of global archaeology that has grown in the last 40 years from its North American base into an increasingly global community of archaeologists, each studying their area of the world in a historical context. Where historical archaeology started as part of the study of the post-Columbian societies of the United States and Canada, it has now expanded to interface with the post-medieval archaeologies of Europe and the diverse post-imperial experiences of Africa, Latin America, and Australasia. The 36 essays in the *International Handbook of Historical Archaeology* have been specially commissioned from the leading researchers in

their fields creating a wide ranging digest of the increasingly global field of historical archaeology The volume is divided into two sections the first reviewing the key themes issues and approaches of historical archaeology today and the second containing a series of case studies charting the development and current state of historical archaeological practice around the world This key reference work captures the energy and diversity of this global discipline today

Historical archaeology has made great strides during the last two decades Early archaeological reports were dominated by descriptions of features and artifacts while research on artifacts was concentrated on studies of topology technology and chronology Site reports from the 1960s and 1970s commonly expressed faith in the potential artifacts had for aiding in the identifying socioeconomic status differences and for understanding the relationships between the social classes in terms of their material culture An emphasis was placed on the presence or absence of porcelain or teaware as an indication of social status These were typical features in site reports written just a few years ago During this same period advances were being made in the study of food bone as archaeologists moved away from bone counts to minimal animal counts and then on to the costs of various cuts of meat Within the last five years our ability to address questions of the relationship between material culture and socioeconomic status has greatly expanded The essays in this volume present efforts toward measuring expenditure and consumption patterns represented by commonly recovered artifacts and food bone These patterns of consumption are examined in conjunction with evidence from documentary sources that provide information on occupations wealth levels and ethnic affiliations of those that did the consuming One of the refreshing aspects of these papers is that the authors are not afraid of documents and their use of them is not limited to a role of confirmation
