Rules Of Green:

The New Rules of Green Marketing Jacquelyn A. Ottman, 2011-02-07 Green products have been around since the 1970s but it's only in recent years that they've become ubiquitous. That's because savvy green marketers are no longer targeting deep green consumers with a save the planet pitch. Instead, they're promoting the added value their products provide: better health, superior performance, good taste, or cost effectiveness. In this innovative book, Ottman argues that emphasizing primary benefits is critical to winning over the mainstream consumer. Drawing on the latest poll data and incorporating lessons learned from her clients and other leading sustainable brands including GE, Nike, Method, Starbucks, Timberland, HP, NatureWorks, Procter & Gamble, Stonyfield Farm, and Wal-Mart, Ottman provides practical strategies, tools, and inspiration for building every aspect of a credible value-based green marketing strategy. She covers such topics as spurring innovation through a proactive approach to sustainability; developing products that are green throughout their life cycle; communicating credibly to avoid accusations of greenwashing; teaming up with stakeholders to maximize outreach to consumers; taking advantage of social media; and much more. *The New Rules of Green Marketing* captures the best of Ottman's two previous groundbreaking books on green marketing and places it within a 21st Century context. Focusing on a new generation of marketers who likely grew up with an appreciation for sustainability, it provides in one place essential strategies, tools, and inspiration for connecting effectively with mainstream consumers.

Green Fiscal Rules? Challenges and Policy Alternatives Francesca Caselli, Andresa Lagerborg, Mr. Paulo A. Medas, 2024-06-21 This paper studies the impact of green fiscal rules designed to protect climate-related spending on debt dynamics. Simulations of green rules that exempt green spending from the rule limits for an emerging market economy illustrate that they can lead to unsustainable debt dynamics when the net zero emissions goal is pursued mostly using spending-based instruments, e.g., investment and subsidies. Or the rule would need to implicitly assume a large fiscal adjustment in the non-green budget, which would undermine its credibility. It will be needed to build broad public consensus for a more comprehensive fiscal strategy that tackles the difficult policy tradeoffs that will be required and takes into account long-term effects. A more appropriate mix of climate policies, including actively employing carbon pricing, should be pursued within the overall setting of fiscal and debt objectives.

Developing green medium-term fiscal frameworks would help to integrate climate change considerations into fiscal policy design in a more comprehensive manner.

Duff, Stuart Green, 2013-01-24 Twenty five leading contemporary theorists of criminal law tackle a range of foundational issues about the proper aims and structure of the criminal law in a liberal democracy The challenges facing criminal law are many There are crises of over criminalization and over imprisonment penal policy has become so politicized that it is difficult to find any clear consensus on what aims the criminal law can properly serve governments seeking to protect their citizens in the face of a range of perceived threats have pushed the outer limits of criminal law and blurred its boundaries To think clearly about the future of criminal law and its role in a liberal society foundational questions about its proper scope structure and operations must be re examined What kinds of conduct should be criminalized What are the principles of criminal responsibility How should offences and defences be defined The criminal process and the criminal trial need to be studied closely and the purposes and modes of punishment should be scrutinized Such a re examination must draw on the resources of various disciplines notably law political and moral philosophy criminology and history it must examine both the inner logic of criminal law and its place in a larger legal and political structure it must attend to the growing field of international criminal law it must consider how the criminal law can respond to the challenges of a changing world Topics covered in this volume include the question of criminalization and the proper scope of the criminal law the grounds of criminal responsibility the ways in which offences and defences should be defined the criminal process and its values criminal punishment the relationship between international criminal law and domestic criminal law Together the essays provide a picture of the exciting state of criminal law theory today and the basis for further research and debate in the coming years

Green Shipping Contracts Pia Rebelo, 2024-08-22 This book applies a contract governance theory to the implementation of decarbonisation objectives in the international maritime sector In doing so it provides an overview of how the network of contractual relationships that characterise commercial shipping can become effective sites of collaboration between shipping actors to improve upon energy efficiency and CO2 reduction To achieve this aim the book investigates and develops a set of contractual tools that can enable private actors to strengthen their commitments to net zero targets whether state mandated or voluntary and develop cooperative norms to guide decision making and contractual interpretation These mechanisms include contractual clauses and drafting considerations which can secure a desired outcome for contractual performance thereby managing climate risks and providing adequate remedy where such risks materialise In a transnational sector such as shipping where contracts can exert greater influence on corporate decarbonisation efforts than international regulation the book challenges the traditional limitations of contract law and calls for a deeper integration of green principles into private relationships Locomotive

Green vs. Green Ryan M. Yonk, Randy T. Simmons, Brian C. Steed, 2013-05-07 Renewable and carbon neutral energy have been promoted as the future of energy production in the United States Non traditional energy sources show promise as alternatives to fossil fuels and may provide a sustainable source of energy in increasingly uncertain energy markets However these new sources of energy face their own set of political administrative and legal challenges Green vs Green explores how mixed land ownership and existing law and regulation present serious challenges to the development of alternative energy sources in the United States Analytically examining and comparing five green energy sectors wind solar geothermal biofuel and hydro power Ryan M Yonk Randy T Simmons and Brian C Steed argue that discussing alternative energy without understanding these pitfalls creates unrealistic expectations regarding the ability to substitute green energy for traditional sources The micro goals of protecting individual areas species small scale ecosystems and other local environmental aims often limits ability to achieve macro goals like preventing global climate change or transitioning to large scale green energy production Statutes and regulations designed to protect environmental and cultural integrity from degradation directly conflict with other stated environmental ends Although there is substantial interest in adding clean energy to the grid it appears that localized environmental interests interfere with broader environmental policy goals and the application of existing environmental laws and regulations may push us closer to gridlock Green vs Green provides a fascinating look into how existing environmental law created or will create substantial regulatory hurdles for future energy generations
