Cities Under Siege Stephen Graham, 2011-11-01 Cities are the new battleground of our increasingly urban world From

the slums of the global South to the wealthy financial centers of the West Cities Under Siege traces the spread of political violence through the sites spaces infrastructure and symbols of the world s rapidly expanding metropolitan areas Drawing on a wealth of original research Stephen Graham shows how Western militaries and security forces now perceive all urban terrain as a conflict zone inhabited by lurking shadow enemies Urban inhabitants have become targets that need to be continually tracked scanned and controlled Graham examines the transformation of Western armies into high tech urban counter insurgency forces He looks at the militarization and surveillance of international borders the use of security concerns to suppress democratic dissent and the enacting of legislation to suspend civilian law In doing so he reveals how the New Military Urbanism permeates the entire fabric of urban life from subway and transport networks hardwired with high tech command and control systems to the insidious militarization of a popular culture corrupted by the all pervasive discourse of terrorism

Quantum Language and the Migration of Scientific Concepts Jennifer Burwell,2025-10-28 How highly abstract quantum concepts were represented in language and how these concepts were later taken up by philosophers literary critics and new age gurus The principles of quantum physics and the strange phenomena they describe are represented most precisely in highly abstract algebraic equations Why then did these mathematically driven concepts compel founders of the field particularly Erwin Schr dinger Niels Bohr and Werner Heisenberg to spend so much time reflecting on ontological epistemological and linguistic concerns What is it about quantum concepts that appeals to latter day Eastern mystics poststructuralist critics and get rich quick schemers How did their interpretations and misinterpretations of quantum phenomena reveal their own priorities In this book Jennifer Burwell examines these questions and considers what quantum phenomena in the context of the founders debates over how to describe them reveal about the relationship between everyday experience perception and language Drawing on linguistic literary and philosophical traditions Burwell illuminates representational and linguistic problems posed by quantum concepts the fact for example that quantum phenomena exist only as probabilities or tendencies toward being and cannot be said to exist in a particular time and place She traces the emergence of quantum theory as an analytic tool in literary criticism in

particular the use of wave particle duality in interpretations of gender differences in the novels of Virginia Woolf and critics connection of Bohr s Principle of Complementarity to poetic form she examines the quantum mysticism of Fritjof Capra and Gary Zukav and she concludes by analyzing nuclear discourse in the context of quantum concepts arguing that it too adopts a language of the unthinkable and the indescribable **Who Travels with the Doctor?** Gillian I. Leitch, Sherry

Ginn, 2016-04-27 Throughout the long running BBC series Doctor Who the Doctor has rarely been alone his companions are essential Male or mostly female alien or mostly human young or old none as old as he the dozens of companions who have travelled with him over the past 50 years have served as sympathetic proxies for the audience Through their adventures the companions are perfected facing danger and thus discovering their strengths and weaknesses Yet they all pay a price losing their innocence and sometimes their lives This collection of new essays examines the role of the companion as an intermediate between viewers and the Doctor The contributors discuss who travels with the Doctor and why how they interact how the companions influence the narrative and how their journeys change them *Apocalypse and Post-Politics*

Mary Manjikian, 2012-03-16 Mary Manjikian s *Apocalypse and Post Politics The Romance of the End* advances the thesis that only those who feel the most safe and whose lives are least precarious can engage in the sort of storytelling which envisions erasing civilization Apocalypse themed novels of contemporary America and historic Britain then are affirmed as a creative luxury of development Manjikian examines a number of such novels using the lens of an international relations theorist identifying faults in the logic of the American exceptionalists who would argue that America is uniquely endowed with resources and a place in the world both of which make continued growth and expansion simultaneously desirable and inevitable In contrast Manjikian shows apocalyptic narratives explore America as merely one nation among many whose trajectory is neither unique nor destined for success *Apocalypse and Post Politics* ultimately argues that the apocalyptic narrative provides both a counterpoint and a corrective to the narrative of exceptionalism Apocalyptic concepts provide a way for contemporary Americans to view the international system from below from the perspective of those who are powerless rather than those who are powerful This sort of theorizing is also useful for intelligence analysts who question how it all will end and whether America s decline can be predicted or prevented **Shipwreck in Art and Literature** Carl

Thompson, 2014-05-09 Tales of shipwreck have always fascinated audiences and as a result there is a rich literature of suffering at sea and an equally rich tradition of visual art depicting this theme Exploring the shifting semiotics and symbolism of shipwreck the interdisciplinary essays in this volume provide a history of a major literary and artistic motif as they consider how depictions have varied over time and across genres and cultures Simultaneously they explore the imaginative potential of shipwreck as they consider the many meanings that have historically attached to maritime disaster and suffering at sea Spanning both popular and high culture and addressing a range of political spiritual aesthetic and environmental concerns this cross cultural comparative study sheds new light on changing attitudes to the sea especially in

the West In particular it foregrounds the role played by the maritime in the emergence of Western modernity and so will appeal not only to those interested in literature and art but also to scholars in history geography international relations and postcolonial studies
