municipalities in the country and it has since been adopted in more than twenty countries worldwide. Most of the scholarly literature has focused on the successful case of Porto Alegre and has neglected to analyze how it fared elsewhere. In this first rigorous comparative study of the phenomenon, Brian Wampler draws evidence from eight municipalities in Brazil to show the varying degrees of success and failure PB has experienced. He identifies why some PB programs have done better than others in achieving the twin goals of ensuring governmental accountability and empowering citizenship rights for the poor residents of these cities in the quest for greater social justice and a well-functioning democracy. Conducting extensive interviews, applying a survey to 650 PB delegates, doing detailed analysis of budgets, and engaging in participant observation, Wampler finds that the three most important factors explaining the variation are the incentives for mayoral administrations to delegate authority the way civil society organizations and citizens respond to the new institutions, and the particular rule structure that is used to delegate authority to citizens.

The Science and Practice of Middle and Long Distance Running

Richard Blagrove, Philip Hayes, 2021-03-29. The popularity of distance running as a sport and a recreational activity is at an all-time high. Motivated by the desire to achieve a personal best, remain healthy, or simply complete an event, distance runners of all ages and abilities actively seek out advice from experienced coaches and sport scientists. This is also reflected in the growth of programmes of education for young coaches and aspiring sport scientists in recent years. There are a multitude of different approaches to training distance runners; however, the basic principles and ingredients required for success are applicable to any distance runner. The science that underpins the training and physical preparation of distance runners has developed considerably in recent years. The most experienced and successful coaches in the distance running community rarely have the opportunity to share their tried and tested methods of training. Similarly, the novel work of sport scientists is often only accessible to elite runners, their support teams, and academia. *The Science and Practice of Middle and Long Distance Running* links together the science and coaching artistry associated with preparing distance runners for events ranging from 800 m up to ultra-marathon distances. It combines the latest scientific evidence published by world-leading sport scientists with the sound training principles and strategies adopted by experienced coaches. The book translates cutting-edge scientific research from the fields of physiology, biomechanics, psychology, and nutrition into practical suggestions for achieving success. Important topical issues and contemporary practices related to health and performance are also addressed. This book is an essential addition to the library of any distance runner, coach, or sport scientist.

Reimagining Democracy

Vincent Russell, 2024-11-05. *Reimagining Democracy: Communication, Activism, Social Justice, and Prefiguration in Participatory Budgeting* presents findings from a multi-year community-based critical ethnography of two participatory budgeting (PB) processes in Denver, Colorado. Drawing on extensive fieldwork and in-depth interviews with PB participants, Vincent Russell argues that the PB processes served as sites of prefigurative communication activism where participants reimagined how government should operate and activists transformed social and power relations through their in-group

deliberations Participants from oppressed populations emphasized forging relationships and feelings of solidarity among each other as they struggled for liberation dignity and social justice Reimagining Democracy teaches important lessons about the state of democratic culture in the United States and offers alternative pathways for public decision making that hold the promise of restructuring practices processes and outcomes to be more socially just Written in an engaging style with a focus on narratives about social change this book is an important contribution for scholars practitioners and community members passionate about social justice activism **Methods of Environmental Impact Assessment** Peter Morris, Riki
