

Chapter 15

Landforms Made by Running Water

Often regarded as the most remote inhabited island in the world, Easter Island lies about 3500 km (about 2200 mi) west of the Chilean coast. First settled by Polynesians about a thousand years ago, the volcanic island has a complicated history, punctuated by famine, epidemics, civil war, slave raids, colonialism, and near deforestation. Because of forest clearing, agriculture, and sheep farming throughout most of the twentieth century, soil erosion has been severe in some island regions, where overland flow and streamflow have created a branching network of gullies in the red soil that drains an ancient lava plateau.
