A Century of Geological Endeavour in Southern Africa, 1895-1995 C. R. Anhaeusser, 1997 The Story of Earth & Life Terence McCarthy, Bruce Rubidge, 2013-07-10 Geologically speaking southern Africa is without equal a treasure house of valuable minerals with a geological history dating back some 3 600 million years In addition the evolution of plants and animals especially mammals and dinosaurs is well preserved in the region which also probably has the best record of the origin of modern man This book provides a fascinating insight into that remarkable history how southern Africa and to some extent the world came to be the way it is how its mineral deposits formed its life evolved and its landscape was shaped Along the way readers will be enthralled by accounts of the Big Bang that marked the beginning of time and matter by drifting and colliding continents folding and fracturing of rocks meteors colliding with the Earth the time when the Earth froze over volcanic eruptions and the start of life Anyone interested in the landscape and ecosystems in which we live will be intrigued to discover how our natural landmarks were formed from the deserts of Namibia to the mountains of the Western Cape or Mpumalanga Why is South Africa so rich in minerals How did glacial deposits come to be found in the Karoo Why did dinosaurs become extinct How did mammals develop from reptiles How closely related are we to the apes The answers to many such questions are found in this lavishly illustrated volume The authors also suggest how we can learn from the past in order to anticipate the future for instance to be able to predict earthquakes deal with volcanic eruptions and meet the challenges of global climate change
