Lymphocyte Stimulation:

Lymphocyte Stimulation Amleto Castellani, 2012-12-06 This book is a collection of some of the papers presented at the EMBO Lecture Course on Lymphocyte stimulation differential sensitivity to radiation biochemical and immunological properties The Course was organized with the aim of fostering interactions between photoradiobiologists and immunologists interested in the problem of DNA damage and repair studied at the lymphocyte level The papers presented in this book are mainly centered on the problem of radiation sensitivity of lymphocytes in relation to DNA repair phenomena The radiation biology of human lymphocytes is dominated by two phenomena a high radiosensitivity of lymphocytes which die in interphase b PHA induced relative radioresistance of those cells which after stimulation escape the interphase death and eventually die in mitosis These phenomena constitute a good system to study some of the factors which control the response of human cells to irradiation In addition it is possible to correlate the development of the relative radioresistance in PHA stimulated lymphocytes with the biochemical changes connected with the transformation processes The papers presented in this book constitute a real contribution to the scientific knowledge in this field of research and suggest that lymphocytes could be a very interesting test material useful for measuring the DNA repair capability of human cells to furnish an indication of individual radiosensitivity in man

Mechanisms of Lymphocyte Activation and Immune Regulation Sudhir Gupta, William E. Paul, Anthony Fauci, 2013-11-11 During the past 5 years rapid progress has been made in the understanding of biochemical pathways for signal transduction in lymphocyte activation Gene cloning technology has been instrumental in defining and making available in pure form of a number of growth and differentiation factors in the characterization of their receptors and in the delineation of genes for the T cell receptor This book is divided into 6 sections Section 1 deals with the molecular structure of the T cell receptor Section 2 discusses the role of the T cell receptor membrane ion channels and biochemical pathways of signal transduction in T cell activation The molecular structures and biological and immunological effects of interleukin 1 interleukin 2 and interleukin 3 are presented in Section 3 This section also details the structure of interleukin 2 receptor and its use as a target for therapy for certain leukemias Section 4 includes the biochemical events which occur following the delivery of the signal for B cell activation proliferation and differentiation by antigen growth differentiation factors The molecular structure of B cell stimulating factors is also discussed The role of oncogene expression in cellular activation and differentiation is included in Section 5 The cellular and molecular basis of natural killing and the molecular basis of cyclosporin A mediated immunosuppression are discussed in detail in Section 6 We hope this book will serve as a reference work on basic mechanisms of lymphocyte activation proliferation and differentiation for immunologists and molecular biologists

Mechanisms of Lymphocyte Activation and Immune Regulation V Sudhir Gupta, William E. Paul, Anthony DeFranco, Roger Perlmutter, 2013-06-29 Signaling

through antigen receptor initiates a complex series of events resulting in the activation of genes that regulate the development proliferation and differentiation of lymphocytes During the past few years rapid progress has been made in understanding the molecular basis of signaling pathways mediated by antigen and cytokine receptors These pathways involve protein tyrosine kinases which are coupled to downstream regulatory molecules including small guanine nucleotide binding proteins e g p21 OS serine threonine kinases e g members of the ERK family and a large group of transcription factors More recently there have been breakthroughs in elucidating the genetic defects underlying three X linked primary immunodeficiency diseases in humans This volume surveys aspects of these rapidly developing areas of research The book is divided into 5 different sections Section I deals with signaling pathways in B lymphocytes It includes a contemporary assessment of B cell antigen receptor structures and discussion of the role of Ig a lg B polypeptides in linking the antigen receptor to intracellular signal transduction pathways The role of accessory molecules in the regulation of signaling by the B cell antigen receptor is also considered Section II adopts a similar approach to the analysis of the antigen receptor on T lymphocytes The importance of specialized signaling motifs in the CD3 polypeptides mechanisms whereby these motifs may interact with the lymphocyte specific protein tyrosine kinases and the downstream consequences of these interactions are reviewed In addition the role of antigen induced apoptosis in the generation of immunological tolerance is discussed

Regulatory Mechanisms in Lymphocyte Activation David Lucas,2012-12-02 Regulatory Mechanisms in Lymphocyte Activation covers the proceedings of the 11th Leukocyte Culture Conference held at the Arizona Medical Center University of Arizona on September 19 23 1976 The contributors cover the various aspects of the conference theme Regulatory Mechanisms in Lymphocyte Activation This book is organized into 15 parts encompassing 160 chapters The three symposium parts discuss the parameters of lymphocyte activation positive regulation and suppression Considerable sections explore the membrane determinants and receptors major histocompatibility complex lymphocyte response and kinetics of DNA synthesis and cell proliferation in lymphocyte activation Other general topics covered include subpopulations of immune reactive cells leukocyte separation techniques cell interactions and ontogeny of lymphocytes The remaining parts consider the leukocyte regulatory mechanisms and issues in lymphocytotoxicity Immunologists and cell biologists will find this book invaluable

Immunology of the Fungal Diseases Rebecca A. Cox,1989-03-31 This informative text is divided into eight chapters each of which presents a comprehensive review of natural and acquired host defense mechanisms in a major mycotic disease The chapters are written by distinguished scientists whose studies have contributed significantly to the understanding of the immunology of the mycoses This text should provide a valuable reference for researchers practicing clinicians and new investigators entering this expanding field

The Pharmacology of Lymphocytes Michael A. Bray,John Morley,2012-12-06 Immunopharmacology why not pharmacimmunology Professor H O Schild University College London 1962 An intact immune response is essential for survival as is evidenced by the various innate immune deficiency syndromes

and by the emergence of the acquired immune deficiency syndrome AIDS as a pandemic during the last decade Substances which stimulate the immune response might contribute to the therapy of AIDS and its precursor AIDS related syndrome as well as of other clinical conditions in which immune responses can be diminished such as carcinoma and infections In other circumstances an intact or heightened immune response may pose clinical problems hence there is need to suppress or diminish components of the immune response For instance it is necessary to impair cellular immunity in order to ensure lasting acceptance of heterografts and it is already established that agents effective in transplantation are therapeutically effective in an range of autoimmune diseases More recently experimental studies have indicated that aberrant manifestations of humoral immunity as in allergies may also be amenable to pharmacological intervention
