Wallace, Charles H. Fay, 1988 Transforming Disability into Ability Policies to Promote Work and Income Security for Disabled People OECD, 2003-02-10 This book examines a wide array of labour market and social protection programmes aimed at people with disabilities and analyses the relationship between policies and outcomes across twenty OECD countries

Methodology for the Digital Calibration of Analog Circuits and Systems Marc Pastre, Maher Kayal, 2006-01-17 Methodology for the Digital Calibration of Analog Circuits and Systems shows how to relax the extreme design constraints in analog circuits allowing the realization of high precision systems even with low performance components A complete methodology is proposed and three applications are detailed To start with an in depth analysis of existing compensation techniques for analog circuit imperfections is carried out The M 2 M sub binary digital to analog converter is thoroughly studied and the use of this very low area circuit in conjunction with a successive approximations algorithm for digital compensation is described A complete methodology based on this compensation circuit and algorithm is then proposed The detection and correction of analog circuit imperfections is studied and a simulation tool allowing the transparent simulation of analog circuits with automatic compensation blocks is introduced The first application shows how the sub binary M 2 M

structure can be employed as a conventional digital to analog converter if two calibration and radix conversion algorithms are implemented. The second application a SOI 1T DRAM is then presented. A digital algorithm chooses a suitable reference value that compensates several circuit imperfections together from the sense amplifier offset to the dispersion of the memory read currents. The third application is the calibration of the sensitivity of a current measurement microsystem based on a Hall magnetic field sensor. Using a variant of the chopper modulation the spinning current technique combined with a second modulation of a reference signal the sensitivity of the complete system is continuously measured without interrupting normal operation. A thermal drift lower than 50 ppm/C is achieved which is 6 to 10 times less than in state of the art implementations. Furthermore the calibration technique also compensates drifts due to mechanical stresses and ageing.

Fully-Integrated Low-Dropout Regulators Xiangyu Mao, Yan Lu, Rui P. Martins, 2025-05-11 This book discusses in detail the key specifications of fully integrated low dropout regulators LDOs. It covers the various LDO architectures including the classic analog architectures and the state of the art digital and switching control methods. The design insight and comparison are discussed according to the key performance index. Readers will be enabled to find a suitable architecture when designing a fully integrated LDO.
