Mass Transfer And Kinetics Of Ion Exchange:

Mass Transfer and Kinetics of Ion Exchange L. Liberti, F.G. Helfferich, 2012-12-06 While ion exchange processes were originally used for the treatment of very dilute solutions many applications for the treatment of concentrated solutions have been developed in recent years In these situations the mass transfer bottlenecks are located in the solid rather than the liquid phase Therefore the development of quantitative models for ion exchange kinetics requires knowledge about the conductance characteristics of ions and solvent in the solid phase A useful approach towards this aim is the study of transport characteristics of these species and of their interactions in solid ion exchange membranes Many different transport processes and related phenomena can be observed in membrane solution systems e.g. ion migration, electroosmosis, diffusion, self-diffusion, osmosis, hydraulic flow, hyperfiltration, reverse osmosis or ultrafiltration, streaming potential and streaming current and membrane potentials also called membrane concentration potentials It is important to correlate all these phenomena so as to avoid a very large number of unnecessary measurements Such correlation is often possible Meares 1976 since all these phenomena are determined by the ease of migration of the different species across the membrane Important correlations have been made and summarized even before high capacity ion exchange membranes became commercially available Sollner 1950 1971j

Fundamentals of Water Treatment Unit Processes David Hendricks, 2016-04-19 Carefully designed to balance coverage of theoretical and practical principles Fundamentals of Water Treatment Unit Processes delineates the principles that support practice using the unit processes approach as the organizing concept The author covers principles common to any kind of water treatment for example drinking water, municipal wastewater Ion-Exchange Chromatography and Related Techniques Pavel Nesterenko, Colin Poole, Yan Sun, 2023-11-15 Ion Exchange Chromatography and Related Techniques defines the current state of the art in ion exchange chromatography and related techniques and their implementation in laboratory and industrial practice This book provides a compact source of information to facilitate the transfer of knowledge and experience acquired by separation science specialists to colleagues from diverse backgrounds who need to acquire fundamental and practical information to facilitate progress in research and management functions reliant on information acquired by separation Individual chapters written by recognized experts lending credibility to the work will allow this book to serve as a high value reference source of current information for analytical and biopharmaceutical chemists Includes individual chapters written by recognized authoritative and visionary experts in the field to provide an overview and focused treatment of a single topic Presents comprehensive coverage of ion exchange techniques from theory to methods to selected applications for ions and biopolymers Provides Tables and diagrams with commonly used data to facilitate practical work comparison of results and decision making

Continuous Biopharmaceutical Processes David Pfister, Lucrèce Nicoud, Massimo Morbidelli, 2018-10-11 Provides a coherent and critical view on the potential benefits of various continuous processes in the biopharmaceutical industry Biopharmaceutical Processing Gunter Jagschies, Eva

Lindskog, Karol Lacki, Parrish M. Galliher, 2018-01-18 *Biopharmaceutical Processing Development Design and Implementation of Manufacturing Processes* covers bioprocessing from cell line development to bulk drug substances. The methods and strategies described are essential learning for every scientist, engineer or manager in the biopharmaceutical and vaccines industry. The integrity of the bioprocess ultimately determines the quality of the product in the biotherapeutics arena and this book covers every stage including all technologies related to downstream purification and upstream processing fields. Economic considerations are included throughout with recommendations for lowering costs and improving efficiencies. Designed for quick reference and easy accessibility of facts, calculations and guidelines, this book is an essential tool for industrial scientists and managers in the biopharmaceutical industry. Offers a comprehensive go-to reference for daily work decisions. Covers both upstream and downstream processes. Includes case studies that emphasize financial outcomes. Presents summaries, decision grids, graphs and overviews for quick reference.

Advances in Soil Science, 2012-12-06 The world needs for food and fiber continue to increase. Population growth in the developing countries peaked at 2.4 percent a year in 1965 and has fallen to about 2.1 percent. However, in many developing countries, almost half the people are under 15 years of age, poised to enter their productive and reproductive years. The challenges to produce enough food for this growing population will remain great. Even more challenging is growing the food in the areas of greatest need. Presently, the world has great surpluses of food and fiber in some areas while there are devastating deficiencies in other areas. Economic conditions and the lack of suitable infrastructure for distribution all too often limit the alleviation of hunger, even when there are adequate supplies, sometimes even within the country itself. World hunger can only be solved in the long run by increasing crop production in the areas where the population is growing most rapidly. This will require increased efforts of both the developed and developing countries. Much of the technology that is so successful for crop production in the developed countries cannot be utilized directly in the developing countries. Many of the principles, however, can and must be adapted to the conditions, both physical and economic, of the developing countries. This series *Advances in Soil Science* **Protein**

Therapeutics Zuben E. Sauna, Chava Kimchi-Sarfaty, 2017-07-19 Medicinal chemistry is both science and art. The science of medicinal chemistry offers mankind one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence, sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team work at the interface between chemistry, biology and medicine. Therefore, the topic-related series *Topics in Medicinal Chemistry* covers all relevant aspects of drug research, e.g. pathobiochemistry of diseases, identification and validation of emerging drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry including combinatorial methods, bioorganic chemistry, natural compounds, high throughput screening, pharmacological in vitro and in vivo investigations, drug receptor interactions on the molecular level, structure activity

relationships drug absorption distribution metabolism elimination toxicology and pharmacogenomics In general special volumes are edited by well known guest editors Process Scale Purification of Antibodies Uwe Gottschalk,2017-03-02 Promoting a continued and much needed renaissance in biopharmaceutical manufacturing this book covers the different strategies and assembles top tier technology experts to address the challenges of antibody purification Updates existing topics and adds new ones that include purification of antibodies produced in novel production systems novel separation technologies novel antibody formats and alternative scaffolds and strategies for ton scale manufacturing Presents new and updated discussions of different purification technologies focusing on how they can address the capacity crunch in antibody purification Emphasizes antibodies and innovative chromatography methods for processing **Preparative**

Chromatography for Separation of Proteins Arne Staby,Anurag S. Rathore,Satinder Ahuja,2017-03-06 Preparative Chromatography for Separation of Proteins addresses a wide range of modeling techniques strategies and case studies of industrial separation of proteins and peptides Covers broad aspects of preparative chromatography with a unique combination of academic and industrial perspectives Presents Combines modeling with compliance useing of Quality by Design QbD approaches including modeling Features a variety of chromatographic case studies not readily accessible to the general public Represents an essential reference resource for academic industrial and pharmaceutical researchers

Vaccine Development and Manufacturing Emily P. Wen,Ronald Ellis,Narahari S. Pujar,2014-10-06 Vaccine Manufacturing and Production is an invaluable reference on how to produce a vaccine from beginning to end addressing all classes of vaccines from a processing production and regulatory viewpoint It will provide comprehensive information on the various fields involved in the production of vaccines from fermentation purification formulation to regulatory filing and facility designs In recent years there have been tremendous advances in all aspects of vaccine manufacturing Improved technology and growth media have been developed for the production of cell culture with high cell density or fermentation Vaccine Manufacturing and Production will serve as a reference on all aspects of vaccine production by providing an in depth description of the available technologies for making different types of vaccines and the current thinking in facility designs and supply issues This book will provide insight to the issues scientists face when producing a vaccine the steps that are involved and will serve as a reference tool regarding state of the art vaccine manufacturing technologies and facility set up Highlights include Comprehensive coverage of vaccine production from a process point of view fermentation to purification to formulation developments from a production point of view from facility design to manufacturing and from a regulatory point of view requirements from government agencies Authors from different major pharmaceutical and biotechnology companies Describes the challenges and issues involved in vaccine production and manufacturing of the different classes of vaccines an area not covered by other books currently on the market
