Machine Learning 1988 International Conference:

Machine Learning Proceedings 1988 John Laird, 2014-05-23 **Machine Learning Proceedings 1988** **Machine Learning Proceedings 1989** Alberto Maria Segre, 2014-06-28 **Machine Learning Proceedings 1989** **Machine Learning** Yves Kodratoff, Ryszard S. Michalski, 2014-06-28 **Machine Learning An Artificial Intelligence Approach Volume III** presents a sample of machine learning research representative of the period between 1986 and 1989 The book is organized into six parts Part One introduces some general issues in the field of machine learning Part Two presents some new developments in the area of empirical learning methods such as flexible learning concepts the Protos learning apprentice system and the WITT system which implements a form of conceptual clustering Part Three gives an account of various analytical learning methods and how analytic learning can be applied to various specific problems Part Four describes efforts to integrate different learning strategies These include the UNIMEM system which empirically discovers similarities among examples and the DISCIPLE multistrategy system which is capable of learning with imperfect background knowledge Part Five provides an overview of research in the area of subsymbolic learning methods Part Six presents two types of formal approaches to machine learning The first is an improvement over Mitchell's version space method the second technique deals with the learning problem faced by a robot in an unfamiliar deterministic finite state environment **Elements of Machine Learning** Pat Langley, 1996 Machine learning is the computational study of algorithms that improve performance based on experience and this book covers the basic issues of artificial intelligence Individual sections introduce the basic concepts and problems in machine learning describe algorithms discuss adaptations of the learning methods to more complex problem solving tasks and much more **Human and Machine Perception 3** Virginio Cantoni, Vito di Gesù, Alessandra Setti, Domenico Tegolo, 2012-12-06 The following are the proceedings of the Fourth International Workshop on Human and Machine Perception held in Palermo Italy on June 20-23 2000 under the auspices of three Institutions the Cybernetic and Biophysics Group GNCB of the Italian National Research Council CNR and the two Inter Department Centers of Cognitive Sciences of Palermo and Pavia University respectively A broad spectrum of topics are covered in this series ranging from computer perception to psychology and physiology of perception The theme of this workshop on Human and Machine Perception was focused on Thinking Deciding and Acting As in the past editions the final goal has been the analysis and the comparison of biological and artificial solutions The focus of the lectures has been on presenting the state of the art and outlining open questions In particular they sought to stress links suggesting possible synergies between the different cultural areas The panel discussion has been conceived as a forum for an open debate briefly introduced by each panelist and mainly aimed at deeper investigation of the different approaches to perception and strictly related topics The panelists were asked to prepare a few statements on hot points as a guide for discussion These statements were delivered to the participants together with the final program for a more qualified discussion **Learning to Classify Text Using Support Vector Machines**

Thorsten Joachims, 2002-04-30 Based on ideas from Support Vector Machines SVMs Learning To Classify Text Using Support Vector Machines presents a new approach to generating text classifiers from examples The approach combines high performance and efficiency with theoretical understanding and improved robustness In particular it is highly effective without greedy heuristic components The SVM approach is computationally efficient in training and classification and it comes with a learning theory that can guide real world applications Learning To Classify Text Using Support Vector Machines gives a complete and detailed description of the SVM approach to learning text classifiers including training algorithms transductive text classification efficient performance estimation and a statistical learning model of text classification In addition it includes an overview of the field of text classification making it self contained even for newcomers to the field This book gives a concise introduction to SVMs for pattern recognition and it includes a detailed description of how to formulate text classification tasks for machine learning

Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors

FGCS '92, 1992 Machine Learning Ryszard S. Michalski, George Tecuci, 1994-02-09 Multistrategy learning is one of the newest and most promising research directions in the development of machine learning systems The objectives of research in this area are to study trade offs between different learning strategies and to develop learning systems that employ multiple types of inference or computational paradigms in a learning process Multistrategy systems offer significant advantages over monostrategy systems They are more flexible in the type of input they can learn from and the type of knowledge they can acquire As a consequence multistrategy systems have the potential to be applicable to a wide range of practical problems This volume is the first book in this fast growing field It contains a selection of contributions by leading researchers specializing in this area See below for earlier volumes in the series

Artificial Intelligence Margaret A. Boden, 1996-06-20 Artificial Intelligence is the study of how to build or program computers to enable them to do what minds can do This volume discusses the ways in which computational ideas and computer modeling can aid our understanding of human and animal minds Major theoretical approaches are outlined as well as some promising recent developments Fundamental philosophical questions are discussed along with topics such as the differences between symbolic and connectionist AI planning and problem solving knowledge representation learning expert systems vision natural language

creativity and human computer interaction This volume is suitable for any psychologist philosopher or computer scientist wanting to know the current state of the art in this area of cognitive science Up to date account of how computational ideas and techniques are relevant to psychology Includes discussions of classical symbolic AI of connectionism neural nets of evolutionary programming and of A Life Discusses a wide range of psychology from low level vision to creativity
