*Teaching Evidence-Based Writing: Nonfiction* Leslie Blauman, 2016-10-14 At heart, learning to read and write analytically is learning to think well. For Evidence Based Writing Nonfiction, renowned teacher Leslie Blauman combed the standards and her classroom bookshelves to craft lessons that use the best nonfiction picture books, biographies, and article excerpts to make writing about reading a clear, concrete process. Students learn to analyze and cite evidence about main idea, point of view, visuals, and words and structure. And best of all, your students gain a confidence in responding to complex texts and ideas that will serve them well in school, on tests, and in any situation when they are asked, "What are you basing that on? Show me how you know."

**Learning From the Octopus** Rafe Sagarin, 2012-03-27 Despite the billions of dollars we've poured into foreign wars, homeland security, and disaster response, we are fundamentally no better prepared for the next terrorist attack or unprecedented flood than we were in 2001. Our response to catastrophe remains unchanged: add another step to airport security, another meter to the levee wall. This approach has proved totally ineffective: reacting to past threats and trying to predict future risks will only waste resources in our increasingly unpredictable world. In *Learning from the Octopus*, ecologist and security expert Rafe Sagarin rethinks the seemingly intractable problem of security by drawing inspiration from a surprising source: nature. Biological organisms have been living and thriving on a risk-filled planet for billions of years. Remarkably, they have done it without planning, predicting, or trying to perfect their responses to complex threats. Rather, they simply adapt to solve the challenges they continually face. Military leaders, public health officials, and business professionals would all like to be more adaptable, but few have figured out how. Sagarin argues that we can learn from observing how nature is organized, how organisms learn, how they create partnerships, and how life continually diversifies on this unpredictable planet. As soon as we dip our toes into a cold Pacific tidepool and watch what we thought was a rock turn into an octopus jetting away in a cloud of ink, we can begin to see how human adaptability can mimic natural adaptation. The same mechanisms that enabled the octopus's escape also allow our immune system to ward off new infectious diseases, helped soldiers in Iraq recognize the threat of IEDs, and aided Google in developing faster ways to detect flu outbreaks. While we will never be able to predict the next earthquake, terrorist attack, or market fluctuation, nature can guide us in developing security systems that are not purely reactive but proactive, holistic, and adaptable. From the tidepools of Monterey to the mountains of Kazakhstan, Sagarin takes us on an eye-opening tour of the security challenges we face and shows us how

we might learn to respond more effectively to the unknown threats lurking in our future      **Octopuses** Carol K. Lindeen, 2005 Simple text and photographs present octopuses their body parts and their behavior
