Pathology of the Eye G.O.H. Naumann, D.J. Apple, 2012-12-06 It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology Not since the three volumes of the Henke Lubarsch handbook appeared forty years ago has anything like this come on the market This book represents a comprehensive thorough and up to date clinically oriented textbook on ocular pathology We are all indebted to the senior author who is now professor of ophthalmology at the University of Erlangen who presents us here with the fruit of decades of industrious endeavors We also have to be grateful to the American ophthalmic pathologist Dr David Apple who as one of the main collaborators of the German edition has now provided us with the English translation The book has a twofold purpose First it is meant to be a source of instruction for ophthalmologists and pathologists For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures Most valuable from a didactic point of view are the colored schematic drawings and the many

tables These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology

Macroscopic Ocular Pathology Fritz H. Stefani, Gerhard Hasenfratz, 2012-12-06 Today ophthalmic pathology deals more and more with pathogenesis using highly sophisticated techniques In recent decades it has expanded to such an extent that it now fills several volumes of a modern comprehensive atlas or textbook Black and white prints of the macroscopic appearance of dissected eyes are standard in modern textbooks Color photographs although providing more visual information and a better insight into the sometimes complex disease processes of the eye are however costly Nevertheless many ophthalmologic colleagues expressed their desire to have me prepare such an atlas It is not intended to replace one of the textbooks in this field but rather to supplement existing texts and to stimulate clinical and diagnostic thinking Hence it should be used in conjunction with textbooks on anatomy and ocular pathology The reader will find references on the different subjects in the excellent modern textbooks listed below Diagnosis and treatment in ophthalmology is to a great extent based on morphologic examination Clinical ophthalmologists have available such excellent tools as the slit lamp the gonioscope and the ophthalmoscope to study and document ocular disease in vivo under high magnification Both external eye structures and transparent ocular structures can be observed better in vivo than in the pathology laboratory Therefore the pathology of these is only presented in conditions in which direct visualization is normally difficult Applied Pathology for

Ophthalmic Microsurgeons Gottfried O.H. Naumann, L. Holbach, F.E. Kruse, 2008-04-05 Written and edited by the world famous expert G O H Naumann this textbook delves into the details of ocular structures such as the nuances of morphology surgical anatomy and pathology The text covers unique features of intraocular surgery in closed system and open eye contexts It goes on to cover crucial aspects of restoring the anterior chamber Then it delineates the spectrum of potential complications in pseudo exfoliation syndromes as well as the most vulnerable cell populations Readers are also treated to the features of normal and pathologic wound healing after non mechanical laser and mechanical interventions Brilliant artwork and sketches illustrate the complex pathology

Apple, 2006 Did you know that the most common surgical eye procedure today began as a tragic injury to a WWII pilot Did you know that one of the first medical devices to ever be implanted into a human was performed by an ophthalmologist Do you know the riveting story behind the man who envisioned and achieved ground breaking medical advancements for vision care

An innovator in eye surgery and undisputed inventor of the intraocular lens IOL Sir Harold Ridley achieved some of the most important discoveries in ophthalmology and medicine over the last 100 years The compelling story of Sir Harold Ridley is one not widely known among today's medical community It is a story of an unassuming medical leader It is a story that needs to be told not only for its historical value but also to provide guidance for future generations on bringing new inventions to the world In the early 1980's Dr David J Apple

one of the most prominent American ophthalmologists and eye researchers conducted studies that by the mid 1980 s had verified that Ridley s innovation the implantation of the IOL was potentially safe and effective Upon hearing of these studies Ridley requested to meet Dr Apple at Ridley s home in England where a life long personal and professional relationship was born Inside Sir Harold Ridley and His Fight for Sight He Changed the World So That We May Better See It Dr David J Apple chronicles the amazing career and life of Sir Harold Ridley based on their friendship and on never before published documents photographs and memorabilia Ridley s tremendous impact on ophthalmology and specifically on the treatment of cataract patients is a story that until now has not been told Sir Harold Ridley and His Fight for Sight is based on 26 years of research performed by Dr Apple Interviews with friends families colleagues as well as the review of medical and hospital records military records and museum exhibits have brought the story of Sir Harold Ridley to forefront of the medical community today Dr Apple brings life and credibility to the pages of Sir Harold Ridley and His Fight for Sight with over 600 images testimonials from Sir Harold Ridley on his quest that began in 1935 and a personal touch that only a true colleague and friend can convey From Harold Ridley 1989 I had twenty five years in the wilderness and would have been spared much suffering if David Apple the one who at last took the trouble to read and analyze all the early implant papers had appeared in the 1950 s for a whole generation of cataract patients might then have enjoyed full visual rehabilitation instead of suffering the abnormalities of aphakia In 1940 during World War II in the legendary Battle of Britain a British pilot was tragically blinded when shattered fragments of his cockpit canopy were embedded in his eyes This tragic event led to the identification of an implant material and eventuated in Ridley s accomplishing a complete cure for cataracts Ridley focused the next decade of his life on the development of an artificial lens to be implanted following the removal of a cataract This device has restored vision to nearly 200 million people worldwide and presently 9 million annually After performing the first IOL implant on a cataract patient Sir Harold Ridley was met with opposition from the medical community It took three decades of struggle until his goal became reality Now the cataract surgery and its cousin refractive surgery including the procedure LASIK are the most common surgical procedures performed today Paving the way for past current and future ophthalmologists Sir Harold Ridley not only implanted the first medical device into a patient he pioneered multiple once in a lifetime discoveries including in
