Jain,Himansu Sekhar Behera,Jyotsna Kumar Mandal,Durga Prasad Mohapatra,2014-12-10 The contributed volume aims to explicate and address the difficulties and challenges for the seamless integration of two core disciplines of computer science i e computational intelligence and data mining Data Mining aims at the automatic discovery of underlying non trivial knowledge from datasets by applying intelligent analysis techniques The interest in this research area has experienced a considerable growth in the last years due to two key factors a knowledge hidden in organizations databases can be exploited to improve strategic and managerial decision making b the large volume of data managed by organizations makes it impossible to carry out a manual analysis The book addresses different methods and techniques of integration for enhancing the overall goal of data mining The book helps to disseminate the knowledge about some innovative active research directions in the field of data mining machine and computational intelligence along with some current issues and applications of related topics Avionic inertial and radar navigation systems specialist (AFSC 32854) Charles A. Ireland,1984 **The Regularized Fast Hartley Transform** Keith John Jones,2021-09-03 This book describes how a key signal image processing algorithm that of the fast Hartley transform FHT or via a simple conversion routine between their outputs of the real data version of the ubiquitous fast Fourier transform FFT might best be formulated to facilitate computationally efficient solutions The author discusses this for both 1 D such as required for example for the spectrum analysis of audio signals and m D such as required for example for the compression of noisy 2 D images or the watermarking of 3 D video signals cases but requiring few computing resources i e low arithmetic memory power requirements etc This is particularly relevant for those application areas such as mobile communications where the available silicon resources as well as the battery life are expected to be limited The aim of this monograph where silicon based computing technology and a resource constrained environment is assumed and the data is real valued in nature has thus been to seek solutions that best match the actual problem needing to be solved The Regularized Fast Hartley

<u>Transform</u> Keith Jones,2010-03-10 Most real world spectrum analysis problems involve the computation of the real data discrete Fourier transform DFT a unitary transform that maps elements N of the linear space of real valued N tuples R to elements of its complex valued N counterpart C and when carried out in hardware it is conventionally achieved via a real from complex strategy using a complex data version of the fast Fourier transform FFT the generic name given to the class of fast algorithms used for the ef cient computation of the DFT Such algorithms are typically derived by explo ing the property of symmetry whether it exists just in the transform kernel or in certain circumstances in the input data and or output data as well In order to make effective use of a complex data FFT however via the chosen real from complex N strategy the input data to the DFT must rst be converted from elements of R to N elements of C The reason for choosing the computational domain of real data problems such N N as this to be C rather than R is due in part to the fact that computing equ ment manufacturers have invested so heavily in producing digital signal processing DSP devices built around the design of the complex data fast multiplier and accumulator MAC an arithmetic unit ideally suited to the implementation of the complex data radix 2 butter y the computational unit used by the familiar class of recursive radix 2 FFT algorithms **High Performance Servers** Architecture Technology Architecture Technology Corpor,2014-06-28 Please note this is a Short Discount publication LANs have gone through stages Early LANs connected asychronous terminals to minicomputers With the advent of the IBM PC the focus on technology changed to that of PCs connected to some type of file server After a number of years the battle over file servers turned into a battle of network operating systems With the advent of the client server model and high performance workstations one direction the battle has been taking is to develop a high performance server engine The general strategy in this arena is to attempt to remove bottlenecks in the processing of service requests to the various networks operating Several consortiums of venture capitalists have poured amounts of money in the range of 20m into developing the ultimate high performance server With Novell shipping thousands of copies of NetWare 386 per month this lucrative market is about to undergo intense long term competition This report describes the general approaches that can be used to develop a high performance server and several of the key products in the area including products from several start up ventures *Essential Wavelets for Statistical Applications and Data Analysis* Todd Ogden,2012-12-06 I once heard the book by Meyer 1993 described as a vulgarization of wavelets While this is true in one sense of the word that of making a sub ject popular Meyer s book is one of the early works written with the non specialist in mind the implication seems to be that such an attempt some how cheapens or coarsens the subject I have to disagree that popularity goes hand in hand with debasement is certainly a beautiful theory underlying wavelet analysis there is While there plenty of beauty left over for the applications of wavelet methods This book is also written for the non specialist and therefore its main thrust is toward wavelet applications Enough theory is given to help the reader gain a basic understanding of how wavelets work in practice but much of the theory can be presented using only a basic level of mathematics Only one theorem is for mally

Smith,Peter B. Denyer,1987-11-30 This book is concerned with advances in serial data computa tional architectures and the CAD tools for their implementation in silicon The bit serial tradition at Edinburgh University EU stretches back some 6 years to the conception of the FIRST silicon compiler FIRST owes much of its inspiration to Dick Lyon then at Xerox P ARC who proposed a structured design methodology for construction of signal processing systems from bit serial building blocks Based on an nMOS cell library FIRST automates much of Lyon s physical design process More recently we began to feel that FIRST should be able to exploit more modern technologies Before this could be achieved we were faced with a massive manual re design task i e the porting of FIRST cell library to a new technology As it was to avoid such tasks that FIRST was conceived in the first place we decided to move the level of user specification much nearer to the silicon level while still hiding details of transistor circuit design place and route etc from the user and by so doing enable the specification of more functionally powerful libraries in technology free form The results of this work are in evidence as advances in serial data design techniques and the SECOND silicon compiler introduced later in this book These achievements could not have been accomplished without help from various sources We take this opportunity to thank Profs BTEC National Diploma Computer Systems Workbook Robin Levi,2002-11-15 This workbook guides the student through all the learning activities required to meet the criteria for Unit 2 Computer Systems in the BTEC Nationals for IT Practitioners The workbook is task oriented and allows students to proceed at their own pace **Future Optical Access Network** Santosh Kumar,Abhilasha Mishra,Rajendraprasad A.
