**Armington Elasticities in Intermediate Inputs Trade** Mika

Saito,2004-02-01 This paper finds that the estimates of Armington elasticities the elasticity of substitution between groups of products identified by country of origin obtained from multilateral trade data can differ from those obtained from bilateral trade data In particular the former tends to be higher than the latter when trade consists largely of intermediate inputs Given that the variety of intermediate inputs traded across borders is increasing rapidly and that the effect of this increase is not adequately captured in multilateral trade data the evidence shows that the use of multilateral trade data to estimate Armington elasticities needs caution

Nordic Perspectives on Transboundary Climate Risk Berninger, Kati,Lager,

Frida, Botnen Holm, Tara, Tynkkynen, Oras, Klein, Richard J.T., Aall, Carlo, Dristig, Amica, Määttä, Helena, Perrels, Adriaan, 2022-05-16 Available online <https://pub.norden.org/temanord2022/531> Climate impacts hit us directly as e.g. floods and forest fires but also cascade over borders. How can we address these transboundary climate risks (TCRs)? To answer this the Nordic Council of Ministers commissioned a study. As open economies the Nordics can be exposed to TCRs. Some key trade partners have medium e.g. China or even high e.g. India risk. The study dove deeper into six food commodities. For example, climate change affects sources of maize negatively with risks outweighing opportunities by 28:1. This can mean higher prices or disturbances in supplies. The Nordics are better prepared than most others but not well enough. There are also important differences among them. The report makes recommendations on how Nordics can better address TCRs together. These include a joint research programme, raising awareness and engaging with the private sector.
