Higher Education and the World of Work Ulrich Teichler,2019-02-11 What does higher education offer to make students competent actors in the world of work and other life spheres This issue is most controversially debated in economically advanced countries since about four decades when higher education in economically advanced countries began to serve larger ranges of the occupational pyramid than merely the intellectually and professionally chosen few The author of this volume analyzes a broad range of issues over four decades of his academic career Employers and graduate surveys secondary analyses of education and employment statistics as well as analyses of policy and academic debates form the basis of the key argument Neither trust in expectations formulated by employers or in income and status as measures of successful study nor isolated claims for the pursuit of academic knowledge for its own sake and for the critical functions of higher education are a suitable reference frame for understanding the dynamic links between higher education and the world of work A match between the number of graduates and the corresponding positions or between the competences acquired during study and job requirements cannot be expected Students are more ambitious and strive for a broader range of goals than they can expect to be rewarded Graduates have to be both highly qualified experts and sceptics as far as conventional wisdom is concerned and they have to be prepared for indeterminate tasks Key themes of this collection of essays are the causes and consequences of an imperfect match between higher education and employment the tensions between employment and work orientation in higher education opportunities of a highly educated society the dynamics of the variety of students the patterns of the higher education system and the horizontal and vertical diversity of careers different notions of higher education and the world of work among economically advanced countries major controversial notions of professional relevance of study in policy and research debates

Stratification in Higher Education Yossi Shavit, 2007-06-13 The mass expansion of higher education is one of the most important social transformations of the second half of the twentieth century In this book scholars from 15 countries representing Western and Eastern Europe East Asia Israel Australia and the United States assess the links between this expansion and inequality in the national context Contrary to most expectations the authors show that as access to higher education expands all social classes benefit Neither greater diversification nor privatization in higher education results in greater inequality In some cases especially where the most advantaged already have significant access to higher education opportunities increase most for persons from disadvantaged origins Also during the late twentieth century opportunities for women increased faster than those for men Offering a new spin on conventional wisdom this book shows how all social classes benefit from the expansion of higher education

The Educational Progress of Women Thomas M. Smith, National Center for Education Statistics, 1995

Convergence and Divergence in European Education and Training Systems Andy Green, Tom Leney, Alison Wolf, 1999 This book offers a unique picture of education and training in the EU between the early 1980s and the late 1990s It synthesizes a wealth of research policy documents and original data from the fifteen Member States and from the European Commission The advent of the Single Market and of the euro have focused attention on economic integration in Europe while discussions of globalization also emphasize common trends and economic convergence Convergence and Divergence in European Education and Training Systems demonstrates that while European education and training systems are responding to powerful general trends they remain highly distinctive with no obvious movement towards a single common pattern
