**Classification of Services in the Digital Economy** Rolf H. Weber, Mira Burri, 2012-09-20 The classification of services in the digital economy proves critical for doing business but it appears to be a particularly complex regulatory matter that is based upon a manifold set of issues In the context of the General Agreement on Trade in Services GATS when the services classification scheme was drafted in the early 1990s convergence processes had not unfolded yet and the internet was still in its infancy and not a reality in daily life Therefore policy makers are now struggling with the problem of regulating trade in electronic services and are in search of a future oriented solution for classifying them in multilateral and preferential trade agreements In late fall 2011 the authors of this study were mandated by the European Union Delegation to Vietnam in the context of the Multilateral Trade Assistance Project 3 MUTRAP 3 to work out a report clarifying the classification of services in the information digital economy and to assess the impact of any decision regarding the classifications on the domestic and external relations policy of Vietnam as well as to discuss the relevant issues with local experts during three on site visits
