Of Human Values:

The Nature of Human Values Milton Rokeach, 1973 Milton Rokeach's book *The Nature of Human Values* 1973 and the Rokeach Value Survey which the book served as the test manual for occupied the final years of his career. In it he posited that a relatively few terminal human values are the internal reference points that all people use to formulate attitudes and opinions and that by measuring the relative ranking of these values one could predict a wide variety of behavior including political affiliation and religious belief. This theory led to a series of experiments in which changes in values led to measurable changes in opinion for an entire small city in the state of Washington.

Understanding Human Values Milton Rokeach, 2008-06-30 This volume presents theoretical methodological and empirical advances in understanding and also in the effects of understanding individual and societal values.

The Study of Human Values Richard W. Kilby, 1993 This book grows out of a long felt need for a readable source that explores all aspects of people's values. Good information on the study of human values exists scattered about in various sources spanning disciplines and decades but it is not easily located nor readily assimilated and organized in mind. Richard W. Kilby attempts to remedy that situation. This book is a general comprehensive work on human values and is composed of chapters on types of values, their nature, their role in lives, their origins and methods of their study or assessment. It was written on the assumption that most of its readers would know little of the subject rather than be specialists but Kilby's main consideration was to include everything that was pertinent and to do full justice to each topic. One portion or another of *The Study of Human Values* should be useful to someone be it student, instructor, researcher or general reader.

Human Values A. N. Tripathi, 2009 **Universal Human Values** Dr. Kuldeep S. Sharma, Dr. Sarveen Kaur Sachdeva, 2023-04-11 **Varieties of Human Value** Charles William Morris, 1956 The present study begun in 1945 is in part the outgrowth of my earlier book *Paths of Life* published in 1942. In that book's interpretation of religious attitudes and ethical systems past and present three basic dimensions of value were postulated and seven possible value patterns were analyzed in terms of those dimensions. The seventh of the patterns or life orientations had never been manifested by a major social group but it was felt that the pattern held promise for man's future. Such an analysis of patterned dimensional human values seemed worthy of sustained and critical investigation. The belief that a scientific study of values might also advance the enterprise of the humanities was in part related to the philosophical tradition of American pragmatism. Peirce, James, Dewey, Mead and Lewis were major influences on my thinking and they had all believed that evaluations were much like scientific judgments and with some variations that a scientific study of values and evaluations not only was possible but would be of service to man in his characteristic activity as valuer. It seemed desirable to put this philosophic position to a serious empirical test. Preface p vii
