The War of the Jesus and Darwin Fishes John C. Caiazza,2017-09-08 This volume s title stems from an observable and seemingly amusing phenomenon the placement of fish symbols on the rear of automobiles There are two kinds one a fish outline with a cross exhibited by Christians the other a fish outline filled with the word evolution with little legs attached underneath These symbols manifest the cultural war between religion and science a clash that draws from nineteenth century conflicts over evolution roots in the Enlightenment Today s cultural environment is a result of the internationalization of communication labor money and commerce This global culture emphasizes tolerance and acceptance

of all peoples and traditions but it also demands a moral and intellectual relativism that rejects master narratives including religious tradition as well as scientific theory In some respects the postmodern environment is caused by science itself by the development of postmodern science its nineteenth century adversarial stance toward religion now somewhat softened Among new developments are the historical understanding of science renewed appreciation of the troubled careers of scientists and God talk among physicists and psychologists Both science and religion are being overwhelmed by new levels of technology which is becoming the premier element of contemporary culture The conflict between science and religion is being resolved in the form of a dynamic Religion and science are both ways of giving moral and intellectual order to the universe enabling mankind to cope with a chaotic universe and live well Both religious critics and scientific researchers have attacked and analyzed pornography which has become a prominent characteristic of our culture Both share contemporary sensitivity to individual opinions and protection of the individual from social control Both science and religion share a sense that postmodern culture lacks structure Caiazza shows how renewed attention to religious and scientific insights can resolve longstanding conflicts providing postmodern society with a vision of tolerable order

Science and the Secrets of Nature

William Eamon,2020-06-30 By explaining how to sire multicolored horses produce nuts without shells and create an egg the size of a human head Giambattista Della Porta s Natural Magic 1559 conveys a fascination with tricks and illusions that makes it a work difficult for historians of science to take seriously Yet according to William Eamon it is in the how to books written by medieval alchemists magicians and artisans that modern science has its roots These compilations of recipes on everything from parlor tricks through medical remedies to wool dyeing fascinated medieval intellectuals because they promised access to esoteric secrets of nature In closely examining this rich but little known source of literature Eamon reveals that printing technology and popular culture had as great if not stronger an impact on early modern science as did the traditional academic disciplines

The Great Reversal: How We Let Technology Take Control of the Planet David Tabachnick,2013-01-01

Every day we are presented with new technologies that can influence human thought and action such as psychopharmaceuticals new generation performance enhancing drugs elective biotechnology and gastric bypass surgery Have we let technology go too far in this respect In The Great Reversal David Edward Tabachnick contends that this question may not be unique to contemporary society Through an assessment of the great works of philosophy and politics Tabachnick explores the largely unrecognized history of technology as an idea The Great Reversal takes the reader back to Aristotle s ancient warning that humanity should never allow technical thinking to cloud our judgment about what makes for a good life It then charts the path of how we began to

relinquish our deeply rooted intellectual and practical capacities that used to allow us to understand and regulate the role of technologies in our lives As the rise of technology threatens our very humanity Tabachnick emphasizes that we still may have time to recover and develop these capacities but we must first decide how far we want to allow technology to determine our existence and our future

Dictionary of Alchemy Mark Haeffner, 2004-01-31 Alchemy is a rich and complex esoteric tradition that has flourished world wide since the beginning of recorded history if not earlier There are three main traditions Western Christian Indo tibetan and Chinese Taoist Within this diversity there are many common features which are analysed organized and brought together in this comprehensive dictionary of terms symbols and personalities This dictionary is the distillation of many years research into the extensive arcane literature It is a reference work to guide the readers through the labyrinth of pre Newtonian science and philosophy The dictionary covers not only the materialist dimension of the search for the elixir of life and the transmutation of metals but also the inner search for the gold of mystical illumination Jung called alchemy the projection of a drama both cosmic and spiritual in laboratory terms This opus alchymicum goes beyond the bare analysis and interpretation of terms to present a harmonic integrated vision of man and nature which may help to heal the fragmented world view of modern science
