Patent Law and Policy Robert P. Merges, 1992 **Fundamentals of Patent Law** Matt Fisher, 2007-09-19 Shortlisted for the 2008 Young Authors Inner Temple Book Prize This new book provides a comprehensive overview of the topic of patent claim interpretation in the UK and in three other select jurisdictions It explores territory that has great commercial significance and yet is severely under explored in existing works The twin issues of the function of patent law and interpretational analysis of the scope of protection have been recently reconsidered by the House of Lords and this work not only reviews their recent cases but also looks at how the US German and Japanese patent systems deal with the complex problems presented in this area The book provides a balanced approach between practical academic and theoretical approaches to claim interpretation In doing so it provides more than a simple case analysis as it enables the reader to consider the shape that the law should take rather than simply recounting the current position Its novelty therefore lies in bringing the theoretical elements of the discussion together with the view of the profession charged with creating the patent documentation in the first place and then viewing this in the light of the detailed comparative studies It is only by considering all of these elements that we begin to see a pathway for the development of the law in this area This is a work that will be an important source of reference for academics and practitioners working in the field of patent law *Encyclopedia of Information Science and Technology, Second Edition* Khosrow-Pour, D.B.A., Mehdi, 2008-10-31 This set of books represents a

Innovation and Its Discontents Adam B. Jaffe, Josh Lerner, 2011-05-27 The United States patent system has become sand rather than lubricant in the wheels of American progress Such is the premise behind this provocative and timely book by two of the nation's leading experts on patents and economic innovation *Innovation and Its Discontents* tells the story of how recent changes in patenting an institutional process that was created to nurture innovation have wreaked havoc on innovators businesses and economic productivity Jaffe and Lerner who have spent the past two decades studying the patent system show how legal changes initiated in the 1980s converted the system from a stimulator of innovation to a creator of litigation and uncertainty that threatens the innovation process itself In one telling vignette Jaffe and Lerner cite a patent litigation campaign brought by a semiconductor chip designer that claims control of an entire category of computer memory chips The firm's claims are based on a modest 15 year old invention whose scope and influence were broadened by secretly manipulating an industry wide cooperative standard setting body Such cases are largely the result of two changes in the patent climate Jaffe and Lerner contend First new laws have made it easier for businesses and inventors to secure patents on products of all kinds and second the laws have tilted the table to favor patent holders no matter how tenuous their claims After analyzing the economic incentives created by the current policies Jaffe and Lerner suggest a three pronged solution for restoring the patent system create incentives to motivate parties who have information about the novelty of a patent provide multiple levels of patent review and replace juries with judges and special masters to preside over certain aspects of infringement cases Well argued and engagingly written *Innovation and Its Discontents* offers a fresh approach for enhancing both the nation's creativity and its economic growth
