ESCalate Why do pupils learning and motivation slow down markedly as they move from primary to secondary school Why is this situation worse in science than in any other curriculum subject This book combines reports of and reflection on best practice in improving progression and continuity of teaching and learning in science particularly at that transition stage between primary and secondary school Presenting the views of teachers and pupils on progression learning and application of science the book suggests practical ways of improving teaching and learning in science Each chapter includes examples of learning materials with notes on how these might be used or adapted by teachers in their own classroom settings Science teaching in secondary schools is often based on assumptions that children know or can do very little so the job in the secondary school becomes one of showing pupils how to start doing science properly as if from scratch The damage that this false view can do to pupils learning motivation and confidence is clear This book will help teachers to assess children's prior knowledge effectively and build meaningful and enjoyable science lessons

Creating Connections David Chittenden, 2004 Science museums are in the business of making science accessible to the public a public constantly bombarded with new information and research results How the public understands this information will affect what they expect and take away from a museum's exhibits and programs Creating Connections looks at the public understanding of research and how it affects what science museums do What are the opportunities and critical issues in research? What strategies are working and what are some pitfalls? What can be learned from the media's experiences with research? Creating Connections will be an invaluable resource for science museum professionals who want to guide their institutions and their visitors toward a new understanding of and appreciation for current research

A Philosopher Looks at Science Nancy Cartwright, 2022-06-30 What is science and what can it do? Nancy Cartwright here takes issue with three common images of science that it amounts to the combination of theory and experiment that all science is basically reducible to physics and that science and the natural world which it pictures are deterministic The author's innovative and thoughtful book draws on examples from the physical life and social sciences alike and focuses on all the products of science not just experiments or theories and how they work together She reveals just what it is that makes science ultimately reliable and how this reliability is nevertheless still compatible with a view of nature as more responsive to human change than we might think Her book is a call for greater intellectual humility by and within scientific institutions It will have strong appeal to anyone who thinks about science and how it is practised in society

Is Science Neurotic? Nicholas Maxwell, 2004-12-14 Is Science Neurotic sets out to show that science suffers from a damaging but rarely noticed methodological disease: rationalistic neurosis Assumptions concerning metaphysics, human value and politics implicit in the aims of science are repressed and the malaise has spread to affect the whole academic enterprise with the potential for extraordinarily damaging long term consequences The book begins with a discussion of the aims and methods of natural science and moves on to discuss social science, philosophy of education, psychoanalytic theory and academic inquiry as a whole It makes an original and compelling contribution to the current debate between those for and those against science arguing that science would be of greater human value if it were more rigorous: we suffer not from too much scientific rationality but too little The author discusses the need for a revolution in the aims of science and academic inquiry in general and in a lively and accessible style
