## **Real Life Science Outdoor Experiments:**

**Experiment Earth** Jack Stilgoe, 2015-02-20 Experiments in geoengineering intentionally manipulating the Earth's climate to reduce global warming have become the focus of a vital debate about responsible science and innovation Drawing on three years of sociological research working with scientists on one of the world's first major geoengineering projects this book examines the politics of experimentation Geoengineering provides a test case for rethinking the responsibilities of scientists and asking how science can take better care of the futures that it helps bring about This book gives students researchers and the general reader interested in the place of science in contemporary society a compelling framework for future thinking and discussion

**Science Outside the Laboratory** Marcel Boumans, 2015-05-01 The conduct of most of social science occurs outside the laboratory Such studies in field science explore phenomena that cannot for practical technical or ethical reasons be explored under controlled conditions These phenomena cannot be fully isolated from their environment or investigated by manipulation or intervention Yet measurement including rigorous or clinical measurement does provide analysts with a sound basis for discerning what occurs under field conditions and why In *Science Outside the Laboratory* Marcel Boumans explores the state of measurement theory its reliability and the role expert judgment plays in field investigations from the perspective of the philosophy of science Its discussion of the problems of passive observation the calculus of observation the two model problem and model based consensus uses illustrations drawn primarily from economics Rich in research and discussion the volume clarifies the extent to which measurement provides valid information about objects and events in field sciences but also has implications for measurement in the laboratory Scholars in the fields of philosophy of science social science and economics will find *Science Outside the Laboratory* a compelling and informative read

*The Global Lab* Adam Fejerskov, 2022-06-16 The *Global Lab* tells the story of a group of organizations and corporations using low income countries as a laboratory It reveals experiments with untested technologies biometric humanitarian solutions and radical methodologies for social change The book maps out the political institutional and ethical coordinates of emergent transnational practices of experimentation asking where and how this movement works while unfolding the human philosophical and political consequences of its ideas and interventions The book takes the reader through Silicon Valley Africa and Asia to understand the tangible and transformative implications of contemporary human experimentation It follows a set of main protagonists from the Bill and Melinda Gates Foundation to experimental economists known as the randomistas to humanitarian organizations and pharmaceutical companies These actors form a movement inspired by the logic of Silicon Valley about the need for fast paced radical change and societal disruption technological innovation as progress and the privatization and commercialization of the human mind and body Ultimately the book examines the inequality of experimentation that is found in the erection of walls between us and them and the imagined universal and often unquestioned value of scientific and technological progress

Cool Experiments with Heat and Cold

Thomas Canavan,2017-07-15 Reading about heat and cold is just the tip of the iceberg this book lets readers create their own icebergs Hands on activities make learning about heat and cold both tangible and fun Simple explanations help readers grasp complex concepts while step by step instructions and accompanying photographs ensure they will master each experiment Helpful tips keep readers safe and offer suggestions for improvements Aspiring young scientists will enjoy trying the recommended additions and twists to activities They ll also learn real life applications for the same scientific principles they re working with at home such as how air pockets in igloos work as insulation
