Real Time Systems Specification Verification And Analysis:

Real-time Systems M. Joseph, Mathai Joseph, 1996 This text provides an account of real time systems The presentation makes use of recent research demonstrating the effectiveness and applicability of mathematically based methods for real time system design Each chapter focuses on a particular technique and examples help reinforce the theory *Resource Management in Real-time Systems and Networks* C. Siva Ram Murthy, G. Manimaran, 2001 This book introduces the concepts and state of the art research developments of resource management in real time systems and networks Real time systems and networks are of increasing importance in many applications including automated factories telecommunication systems defense systems and space systems This book introduces the concepts and state of the art research developments of resource management in real time systems and networks Unlike other texts in the field it covers the entire spectrum of issues in resource management including task scheduling in uniprocessor real time systems task scheduling fault tolerant task scheduling and resource reclaiming in multiprocessor real time systems conventional task scheduling and object based task scheduling in distributed real time systems message scheduling QoS routing dependable communication multicast communication and medium access protocols in real time networks It provides algorithmic treatments for all of the issues addressed highlighting the intuition behind each algorithm and giving examples The book also includes two chapters of case studies

The SPIN Verification System Jean-Charles Grégoire, Gerard J. Holzmann, Doron A. Peled, 1997 What is SPIN SPIN is a general tool for the specification and formal verification of software for distributed systems It has been used to detect design errors in a wide range of applications such as abstract distributed algorithms data communications protocols operating systems code and telephone switching code The verifier can check for basic correctness properties such as absence of deadlock and race conditions logical completeness or unwarranted assumptions about the relative speeds of processes It can also check for more subtle system dependent correctness properties expressed in the syntax of Linear time Temporal Logic LTL The tool translates LTL formulae automatically into automata representations which can be used in an efficient on the fly verifications procedure This DIMACS volume presents the papers contributed to the second international workshop that was held on the SPIN verification system at Rutgers University in August 1996 The work covers theoretical and foundational studies of formal verifications empirical studies of the effectiveness of different types of algorithms significant practical applications of the SPIN verifier and discussions of extensions and revisions of the basic code This text will be of interest to those working in applications

Correct System Design Ernst-Rüdiger Olderog, Bernhard Steffen, 2003-06-26 Computers are gaining more and more control over systems that we use or rely on in our daily lives privately as well as professionally In safety critical applications as well as in others it is of paramount importance that systems controlled by a computer or computing systems themselves reliably behave in accordance with the specification and requirements in other words here correctness of the system of its software and hardware is crucial In order to cope with this challenge software engineers and computer scientists need to understand the foundations of programming how different formal theories are linked together how compilers correctly translate high level programs into machine code and why transformations performed are justifiable This book presents 17 mutually reviewed invited papers organized in sections on methodology programming automation compilation and application

Handbook of Scheduling Joseph Y-T. Leung, 2004-04-27 This handbook provides full coverage of the most recent and advanced topics in scheduling assembling researchers from all relevant disciplines to facilitate new insights Presented in six parts these experts provides introductory material complete with tutorials and algorithms then examine classical scheduling problems Part 3 explores scheduling models that originate in areas such as computer science operations research The following section examines scheduling problems that arise in real time systems Part 5 discusses stochastic scheduling and queueing networks and the final section discusses a range of applications in a variety of areas from airlines to hospitals

transcription of the results Nowadays a system implemented to perform the function of Babbage's engine would be classed as safety critical That is the failure of the system to produce correct results could result in the loss of human life mass destruction of property in the form of ships and cargo as well as financial losses and loss of competitive advantage for the shipping firm

Mathematics of Program Construction Roland Backhouse, Jose Nuno Oliveira, 2006-12-30 This volume contains the proceedings of MPC 2000 the fifth international conference on Mathematics of Program Construction This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful and usable in the process of constructing computer programs whether implemented in hardware or software The focus is on techniques that combine precision with concision enabling programs to be constructed by formal calculation Within this theme the scope of the series is very diverse including programming methodology program specification and transformation programming paradigms programming calculi and programming language semantics The quality of the papers submitted to the conference was in general very high However the number of submissions has decreased compared to the previous conferences in the series Each paper was refereed by at least five and often more committee members In order to maintain the high standards of the conference the committee took a stringent view on quality this has meant that in some cases a paper was rejected even though there was a basis for a good conference or journal paper but the submitted paper did not meet the committee's required standards In a few cases a good paper was rejected on the grounds that it did not fit within the scope of the conference

Dependable Computing EDCC-4 Fabrizio Grandoni, 2003-08-02 It was with great pleasure that on behalf of the entire organizing committee I welcomed participants to EDCC 4 the Fourth European Dependable Computing Conference held for the first time in France The fourth issue of EDCC carried on the traditions established by the previous conferences in this series EDCC 1 was held in Berlin Germany in October 1994 EDCC 2 in Taormina Italy in October 1996 and EDCC 3 in Prague Czech Republic in September 1999 EDCC evolved from a merger of two other conference series at the moment when the Iron Curtain fell One of these known as the International Conference on Fault Tolerant Computing Systems was organized during the period 1982-1991 by the German Technical Interest Group Fault Tolerant Computing Systems The other series known as the International Conference on Fault Tolerant Systems and Diagnostics was organized during the period 1975-1990 in the former Czechoslovakia Poland Bulgaria

and the former GDR The composition of the EDCC steering committee and the organizing committees of the successive issues of the conference have mirrored the East West unification character of the conference series The EDCC conference is becoming a unique meeting point for researchers and practitioners from all over the world in the field of Dependable Systems It is organized by the SEE Working Group Dependable Computing in France the GI ITG GMA Technical Committee on Dependability and Fault Tolerance in Germany and the AICA Working Group Dependability of Computer Systems in Italy Furthermore committees of several global professional organizations such as IEEE and IFIP support the conference

On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself In fact their attendance was largely sponsored by the other participants If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application created by the Internet and the so called Semantic Web For DOA 2004 the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics

and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations These subject areas naturally overlap and many submissions in

fact also treat envisaged mutual impacts among them Real-time Systems Education III Jerzy Nawrocki, Jean-Jacques Schwarz, Janusz Zalewski, 1999 Poznan Poland was selected as the site of the third annual workshop on this topic to coincide with the Software Engineering Education Symposium SEES 98 and also to establish an international presence in Central Europe although we are not an event on the scale of olympic games Twenty six participants pictured present papers related to real time systems programs and curricula teaching RT systems design and verification components of RT labs RT systems

in control engineering education and in other disciplines Also includes invited talks on RT devices at practical prices and the essentials of RT education For the uninitiated IEEE stands for the Institute of Electrical and Electronic Engineers Author index only Annotation copyrighted by Book News Inc Portland OR

2004: OTM 2004 Workshops R. Meersman, 2004-10-14 This book constitutes the joint refereed proceedings of seven international workshops held as part of OTM 2004 in Agia Napa Cyprus in October 2004 The 73 revised papers presented together with 31 abstracts of posters from the OTM main conferences were carefully reviewed and selected from more than 150 submissions In accordance with the 7 workshops the papers are organized in topical sections on grid computing and its applications to data analysis Java technologies for real time and embedded systems modeling inter organizational systems regulatory ontologies ontologies semantics and e learning PhD symposium and interoperability

Formal Methods and Models for System Design Rajesh Gupta, Paul Le Guernic, Sandeep Kumar Shukla, Jean-Pierre Talpin, 2004-10-01 Perhaps

nothing characterizes the inherent heterogeneity in embedded systems than the ability to choose between hardware and software implementations of a given system function Indeed most embedded systems at their core represent a careful division and design of hardware and software parts of the system To do this task effectively models and methods are necessary functionality to capture application behavior needs and system implementation constraints Formal modeling can be valuable in addressing these tasks As with most engineering domains co design practice defines the state of the it seeks to add new capabilities in system conceptualization model transformation optimization and implementation These advances particularly those related to synthesis and verification tasks directly depend upon formal understanding of system behavior and performance measures Current practice in system modeling relies upon exploiting high level programming frameworks such as SystemC Esterel to capture design at increasingly higher levels of abstraction and attempts to reduce the system implementation task While raising the abstraction levels for design and verification tasks to be really useful these approaches must also provide for reuse adaptation of the existing intellectual property IP blocks

Computer Science Handbook

Allen B. Tucker, 2004-06-28 When you think about how far and fast computer science has progressed in recent years it is not hard to conclude that a seven year old handbook may fall a little short of the kind of reference today's computer scientists software engineers and IT professionals need With a broadened scope more emphasis on applied computing and more than 70 chapters
