command and control across the range of military operations and to generate information and knowledge about an adversary and friendly forces Although the Cold War is over new regional threats to U S interests are increasingly likely The U S military in its traditional role as an instrument of national power will be required to deal with a more varied set of military tasks and missions helping to both establish and maintain regional peace and stability and also coping with less traditional tasks such as humanitarian relief and disaster recovery Budget pressures have already resulted in a significantly reduced force structure and withdrawal of U S military presence from many overseas locations Joint operations are now the norm and in many cases U S military operations are combined with those of allied and coalition forces Forces responding to contingencies are likely to be employed come as they are with only minimal time for preparation and deployment before entering the operational phase of a contingency The military that must play these roles has many different C4I systems both old and new Older systems often were built for single purpose stand alone applications and often rely heavily on military specific technology In contrast current systems are increasingly being built to meet explicit requirements for interoperability and flexibility and the Department of Defense has been increasingly capitalizing on commercial information technologies for C4I systems

Right To National Self-Defense Dimitrios Delibasis, 2007-11-19 This ambitious work which took the better part of a decade to produce will be essential reading for all serious defence study students and of absorbing interest to military professionals and lay people concerned with the future of warfare and all aspects of response to military attack Its ultimate aim is to demonstrate that the advent of Cyberwarfare has pushed traditional legal thinking regarding the regulation of forcible action beyond traditional boundaries It attempts to do so by critically analyzing specific characteristics which are inherent to Cyberwarfare such as stealth speed untraceability the availability to State as well as Non State sponsored agents their defiance of traditional borders and an unprecedented potential for destruction all of which have played a major role in making obsolescent traditional legal norms relied upon for the effective regulation of the use of force It follows from the above that no defence system can be effectively regulated especially one as new and unconventional as Information Warfare unless all its specific aspects are explored as deeply as possible The best means to achieve such a purpose have been deemed to be through the inclusion as well as the careful analysis of as many real life examples of Information Warfare operations as possible in order to illustrate the special nature of Information Warfare and its various individual features The examples compiled for inclusion have been selected not on the basis of being the most recent but on the basis of their factual background being as fully known as possible Consequently this book has been constructed around the concept of legality starting with a section outlining currently existing legal norms of individual self defense then applying those norms to Information Warfare Operations including a presentation of existing international legal instruments with provisions applicable to Information Warfare which could serve as additional essential guidelines for a future legal framework specifically crafted to regulate the use of force in cyberspace Last but not least this book sets a paradigm with regard to Cyberwarfare as well as with other methods of warfare which escape the boundaries of the traditional State monopoly of the use of force It ultimately shows the extent to which traditional legal thinking which is shaped around the premise of regulating typical forms of State forcible action when faced with such methods of warfare is totally obsolete
