*Encyclopedia of Geography Terms, Themes, and Concepts* Reuel R. Hanks,2011-10-17 This text provides an essential reference handbook for students of geography and related social sciences How did the Greek geographer Eratosthenes make an accurate calculation of the earth s circumference more than 1 500 years before the first voyage of Columbus to the New

World What are the green belts of England that dominate its rural landscape And what is regarded as the driest continent on the planet This handbook offers a broad coverage of terminology and concepts serving as both an encyclopedic dictionary of geography terms and an approachable overview to the human and physical aspects of world geography Approximately 150 geographic terms and concepts are defined and discussed providing an accessible reference for anyone who requires a deeper knowledge of the language and ideas that are important to geography as a discipline Helpful sidebars are provided to shed light on unusual or controversial theories and concepts All major geographic concepts and terms are addressed and comprehensively explained using examples

**Everyday Matters in Science and Mathematics** Ricardo Nemirovsky, Ann S. Rosebery, Jesse Solomon, Beth Warren, 2004-12-13 This book re examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning making experiences Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field s thinking about learning Further it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed

**Everyday Matters in Science and Mathematics Studies of Complex Classroom Events** is an important resource for researchers teacher educators and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design
