Twentieth-Century Sprawl Owen D. Gutfreund, 2004-05-01 Here Owen Gutfreund offers a fascinating look at how highways have dramatically transformed American communities nationwide aiding growth and development in unsettled areas and undermining existing urban centers Gutfreund uses a follow the money approach showing how government policies subsidized suburban development and fueled a chronic nationwide dependence on cars and roadbuilding with little regard for expense efficiency ecological damage or social equity The consequence was a combination of unstoppable suburban sprawl along with ballooning municipal debt burdens deteriorating center cities and profound changes in American society and culture Gutfreund tells the story via case studies of three communities Denver Colorado Middlebury Vermont and Smyrna Tennessee Different as these places are they all show the ways that government sponsored highway development radically transformed America's cities and towns Based on original research and vividly written *Twentieth Century Sprawl* brings to light the benefits and consequences of the spread of American highways and makes a major contribution to our understanding of issues that still plague our cities and suburbs today *Local Infrastructure Investment In Rural America* Thomas G. Policy publication Since the demise of urban renewal in the early 1970s the politics of large scale public investment in and around major American cities has received little scholarly attention In *Mega Projects* Alan Altshuler and David Luberoff analyze the unprecedented wave of large scale mega public investments that occurred in American cities during the 1950s and 1960s the social upheavals they triggered which derailed large numbers of projects during the late 1960s and early 1970s and the political impulses that have shaped a new generation of urban mega projects in the decades since They also appraise the most important consequences of policy shifts over this half century and draw out common themes from the rich variety of programmatic and project developments that they chronicle The authors integrate narratives of national as well as state and local policymaking and of mobilization by mainly local project advocates with a profound examination of how well leading theories of urban politics explain the observed realities The specific cases they analyze include a wide mix of transportation and downtown revitalization projects drawn from numerous regions most notably Boston Denver Los Angeles New York City Chicago Atlanta Dallas Portland and Seattle While their original research focuses on highway airport and rail transit programs and projects they draw as well on the work of others to analyze the politics of public investment in urban renewal downtown retailing convention centers and professional sports facilities In comparing their findings with leading theories of urban and American politics Altshuler and Luberoff arrive at some surprising findings about which perform best and also reveal some important gaps in the literature as a whole In a concluding chapter they examine the potential effects of new fiscal pressures business mobilization to relax environmental constraints and security concerns in the wake of September 11 And they make clear their own views about how best to achieve a balance between developmental environmental and democratic values in public investment decisionmaking Integrating fifty years of urban development history with leading theories of urban and American politics *Mega Projects* provides significant new insights into urban and intergovernmental politics

The Politics of Capital Investment Carolyn Teich Adams,1988-01-01 This book examines both the politics and products of the public investment process in one of America s largest cities It broadens the scope of contemporary debates on the political economy of urban development to include not only large scale redevelopment projects but also neighborhood facilities such as schools parks and libraries Showing the share of investments that went into Philadelphia s downtown versus its residential neighborhoods from 1950 to 1980 the author challenges the widely held view that public investment patterns simply reflect political pressures from pro development groups Instead she shows that a city s decision to build often hinges on the availability and the sources of investment capital

Legal, Institutional, and Economic Indicators of Forest Conservation and Sustainable Management ,2005 This review looks at the Nation s legal

institutional and economic capacity to promote forest conservation and sustainable resource management It focuses on 20 indicators of Criterion Seven of the so called Montreal Process and involves an extensive search and synthesis of information from a variety of sources It identifies ways to fill information gaps and improve the usefulness of several indicators It concludes that there is substantial information about the application of such capacities although that application is widely dispersed among agencies and private interests which in turn has led to differing interpretations of the indicators Individual chapters identify a need to further develop the conceptual foundation on which many of the indicators are predicated While many uncertainties in the type and accuracy of information are brought to light the review clearly indicates that legal institutional and economic capacities to promote sustainability are large and widely available in both the public and private sectors P vi
