Machine Translation: From Research to Real Users Stephen D.

Richardson, 2003-06-30 AMTA 2002 From Research to Real Users Ever since the showdown between Empiricists and Rationalists a decade ago at TMI 92 MT researchers have hotly pursued promising paradigms for MT including data driven approaches e.g. statistical example based and hybrids that integrate these with more traditional rule based components During the same period commercial MT systems with standard transfer architectures have evolved along a parallel and almost unrelated track increasing their coverage primarily through manual update of their lexicons we assume and achieving much broader acceptance and usage principally through the medium of the Internet Webpage translators have become commonplace a number of online translation services have appeared including in their offerings both raw and postedited MT and large corporations have been turning increasingly to MT to address the exigencies of global communication Still the output of the transfer based systems employed in this expansion represents but a small drop in the ever growing translation marketplace bucket
