*Handbook of Renal Biopsy Pathology* Alec J. Howie, 2012-12-06 1 This book is meant to be a practical guide to interpretation of renal biopsy specimens Two things follow First the book has much less text than most on renal pathology because only a little is said about pathogenesis and other matters not directly relevant to interpretation nor are diseases mentioned that are not investigated by biopsy such as many developmental disorders nor is there much on rare conditions Large and comprehensive textbooks can be consulted where necessary The second thing is that this book has a different approach from standard texts in pathology These consider each disease separately as identified known defined entities This is excellent if a pathologist knows what to call the disease in a particular specimen and wishes to confirm the diagnosis or find out more about it but is little use if the pathologist has no idea about the diagnosis Most pathologists have experience of the search through many descriptions of diseases in textbooks to try to find the name that seems the most appropriate for the abnormalities in a specimen This book should be seen as a guide into the standard texts that may be used as references for further information once a diagnosis has been made This book tries to help the pathologist by the use of two rules common things are common and diseases present in characteristic clinical ways The book is arranged by clinical presentation rather than by diseases and concentrates on common conditions

**New Trends in Cancer for the 21st Century** Antonio Llombart-Bosch, José A.

López-Guerrero, Vicente Felipo, 2006-09-28 It is difficult to imagine anyone who has not heard of cancer. This disease can affect families, friends, or any one of us at any time in our lives. Every year, nearly 3 million Europeans are diagnosed with cancer, leading to around 800 000 deaths per year. These deaths occur not only in aging populations but also in children and adults who are in the most active period of their lives. This represents a tremendous problem that cannot be ignored by politicians or citizens. Fortunately, there is a constantly growing awareness that although cancer is a problem to be dealt with by clinicians, it should also be the concern of everyone. This volume contains the lectures held at the International Symposium on Cancer: New Trends in Cancer for the 21st Century. Fundamental researchers, politicians, and representatives from patient coalitions share here their knowledge and interests as well as their concerns and experiences. Not only do these papers provide state-of-the-art information on cancer; they are also an opportunity to look at the problem from different points of view. It can be encouraging to realise that we are not alone in this fight.
