*Psoriasis - Recent Advances in Diagnosis and*

*Treatment* Pierre Vereecken, 2024-09-04 Psoriasis is a chronic autoinflammatory skin condition significantly impacting quality of life. Its prevalence peaks at 2% in Northern countries. Thus, it is imperative to examine what practitioners can discern from psoriatic patients ranging from the typical chronic plaque psoriasis to other manifestations. Recognizing these signs promptly can bring relief to patients and ensure optimal support. Treatment decisions must strike a balance between benefits and side effects, with patient empowerment being crucial for them to manage their lives effectively. This book offers readers, regardless of their specialty, the chance to view psoriatic patients from a different perspective, acknowledging that these patients require more than just pharmacological interventions.

**Recent Advances in Microbiology Research** S. Pati, S. Mohapatra, D. P. Samantaray, C. C. Rath, 2022-03-19 Microbiology is the study of tiny microbes including bacteria, viruses, archaea, fungi, microalgae, protozoans, etc. They are ubiquitous in nature, survive and grow in both hospitable and inhospitable ecosystems vital to the environment, having both harmful and beneficial facets to the entire biological world and are exploited by researchers. Microbiology exists in the world from the dawn of civilization. Our Grandmothers prepared curd since time immemorial without the knowledge that the bacterium *Lactobacillus* converts milk to curd. Our Grandfathers used to grow legumes after rice as a system of crop rotation to find better productivity without any scientific knowledge. It is the fact that the soil bacterium *Rhizobium* symbiotically gets associated with leguminous roots, forms root nodules, and fixes atmospheric Nitrogen, increasing soil fertility. After the monstrous discovery of bacteria in 1674 by Antony Van Leeuwenhoek, Microbiology developed as a branch of Science. Exploring knowledge over conversion of hypothesis to phenomenon paves the way for new approaches, leading to milestones in the dome of microbiology. Scientists with their research excellence have recognized the potentiality of Microorganisms, and today Microorganisms find their applications in Agriculture, Food, Textile, Paper, Leather, Pharmaceutical, Cosmetic Industries, etc. for quality, value-added products, and sustainability of Human Society. Not only that, microbes find their wide application in environment cleaning through bioremediation, sewage treatment methods, biotransformation Technologies, and so on. Microbial fuel cells are an alternate to fossil fuels too. Genetically modified microorganisms show a great potentiality and applications for the growth, development, and sustainability of human society in various fields. Recent Advances in Microbiology Research deals with application of potential microbes to specific endeavors viz. natural resources recovery, bioremediation, production of foods, supplements, chemicals, biomaterials, bioenergy, drugs, vaccines, and development of diagnostic tools, biosensor techniques carried out by different workers in the field of microbiology. The Editors have tried to compile this book as a maiden effort to collate documentation to augment visibility pertaining to recent developments in microbiological research. The editors take vanity to congratulate and express their sincere thanks/gratitude to all the valuable contributions the contributors received from diverse nook corners of globe and administrative/technical support received from the publisher. As a matter of fact, it would help the students, academicians, researchers to abreast the recent knowledge in the field of Microbiological research.

**the Human Placenta** Jing Zheng, 2012-03-07 This book contains the total of 19 chapters each of which is written by one or several experts in the corresponding field The objective of this book is to provide a comprehensive and most updated overview of the human placenta including current advances and future directions in the early detection recognition and management of placental abnormalities as well as the most common placental structure and functions abnormalities toxicology infections and pathologies It also includes a highly controversial topic therapeutic applications of the human placenta A collection of articles presented by active investigators provides a clear update in the area of placental research for medical students nurse practitioners practicing clinicians and biomedical researchers in the fields of obstetrics pediatrics family practice genetics and others who may be interested in human placentas Editor's Pick 2021: Highlights in Molecular and Cellular Pathology Ramani Ramchandran, 2022-02-17 *Indopathy for Neuroprotection: Recent Advances* Surya Pratap Singh, Hagera Dilnashin, Hareram Birla, Chetan Keswani, 2022-12-07 Degenerative nerve diseases are age related progressive and cause irreversible neurological loss that may lead to death Chronic diseases like amyotrophic lateral sclerosis Huntington's disease Alzheimer's disease and Parkinson's disease are associated with insoluble protein depositions and pose serious health challenges that may intensify in the coming decades Current therapies only help to alleviate some of the physical or mental symptoms associated with neurodegenerative diseases although there is currently no remedy for slow disease progression In recent years attempts have been made to discover a mechanism for neurodegenerative diseases and prospective treatment that may help mitigate aging effects and prevent these diseases Natural products have been a constant source of new approaches for the treatment of neurodegenerative diseases in particular plant alkaloids and polyphenolic compounds *Indopathy for Neuroprotection Recent Advances* highlights herbal treatments that are preferred over conventional treatments in some regions Book chapters focus on the effects of various medicinal plants that have shown promise in reversing pathological symptoms of neurodegenerative disease and highlight the neuroprotective role of medicinal herbal phytochemicals and their mechanism of action The book serves as a reference for pharmacology and herbal medicine scholars as well as healthcare workers interested in information about alternative and complementary therapies for neurological disorders Recent Advances in Diagnosis and Treatment of Brain Tumors: From Pediatrics to Adults John Bianco, Dimitrios N. Kanakis, Cesare Zoia, Archya Dasgupta, Majaz Moonis, 2025-06-12 In the last few years an impressive development has been achieved in the arena of new diagnostic and therapeutic approaches for brain tumors both in children and adults This has in turn led to the recognition of new tumour entities as well as to better categorization of the existing ones The recent WHO classification of the CNS tumors 2021 has been entirely revised and the term integrated diagnosis has been since then applied which refers to a combination of the classical histopathological diagnosis with the accompanying molecular results of some of the most common tumors In addition a lot of progress has been made in the field of imaging with the invention of more accurate methods and the improvement of previously

established diagnostic modalities As a result of the aforementioned achievements in the diagnosis of brain tumors new treatment options have been introduced which respond more successfully to the handling of the several tumor entities Due to the immense progress not only in the field of diagnosis but also in the treatment of brain tumors it is of utmost importance to present the newly identified biomarkers and innovative techniques which allow on the one hand a more accurate diagnosis and on the other hand a more precise therapeutic intervention Since a lot of research is conducted at present with this regard the result of these investigations should be shared with the broader research community in order to improve thereafter both the available diagnostic methods in the fields of histopathology and imaging and the therapeutic techniques in the areas of neurosurgery and chemo radiotherapy Undoubtfully this will contribute substantially in the accomplishment of the target of personalized medicine in the public The current Research Topic aims to bring together new discoveries in the diagnosis and therapy of pediatric and adult brain tumors In this context there is an open invitation to all the researchers and clinicians who are involved in this area to participate actively by contributing their valuable results and experiences with research focused on primary brain tumors Moving towards our actual goal as medical society which is not other than the implementation of personalized medicine our actual topic could be of particular value in the accomplishment of some of its fundamentals namely i precise diagnosis ii personalized intervention iii patient s participation iv prediction and prevention of the disease and v supportive care neurorehabilitation Manuscripts that are primarily in silico bioinformatics based including prognostic algorithms using large databases and do not have sufficient validation in an independent cohort of patients from one or more institutions rather than using another database and or functional validation in at least two acceptable tumor cell lines in vitro in vivo will not be considered
