Membrane Processes in Biotechnology C.A. Costa, Joaquim S. Cabral, 2012-12-06 Separation processes in biotechnology are of increasing industrial importance since they entail the major costs of bioprocessing especially when high purity is required Chromatography and membranes are two of the most important technologies used for direct treatment of fermentation broths as well as for high resolution steps in product purification The theoretical foundations of

chromatographic and membrane processes are well understood for the case of small molecules Nevertheless there is a need to adapt and further develop that knowledge to the processing of large biological molecules This is being achieved with the contribution of other areas like molecular biology and materials science The objective of this NATO Advanced Study Institute is to present an updated treatment of the fundamentals of chromatographic and membrane processes with special relevance in bioprocessing This volume collects the lectures presented at this Institute The lectures are arranged in five chapters Chapter 1 deals with chromatographic processes covering topics like equilibrium kinetics and contacting devices Membrane processes and some applications in biotechnology are treated in chapter 2 Chapter 3 is devoted to affinity chromatographic and membrane processes Chapter 4 considers the current developments on chromatographic supports and membranes both from the constitutive materials and from points of view Scale up optimization and reaction separation integration are the topics covered in chapter 5 We are very grateful to all lecturers and participants that made possible this Institute Financial support from NATO Scientific Affairs Division INIC JNICT FLAD University of Ac ores and DRT Ac ores is gratefully acknowledged

Colloid Chemistry in Mineral Processing J.S. Laskowski, J. Ralston, 2015-08-14 Within this volume is a thorough coverage of the fundamental principles embracing modern theories of colloid chemistry applied to mineral processing. It is written in respect for Dr J A Kitchener distinguished Reader in the Science of Mineral Processing in the Royal School of Mines Imperial College University of London recently retired. Dr Kitchener's expertise in colloid chemistry has led to numerous fundamental insights and practical advances in flotation selective flocculation and the treatment of slimes. Colloid chemistry is inevitably involved in all aspects of mineral processing ranging from how collectors selectively adsorb on to mineral surfaces in flotation to the forces which control the stability of dispersions of submicron particles as well as embracing the behaviour of hydrolyzed metal ions in solid water slurries. The intelligent use of this information is essential in the effective design of separation processes and strategies by the mineral processor. Up to date bibliographies are included at the end of each of the 13 chapters making this volume a useful general resource for researchers students and mineral processors.

Protein Purification Process Engineering Roger Harrison, 2019-07-16 Offers coverage of the development of protein purification processes for large scale commercial operations and addresses process development scale up applications and mathematical descriptions. Technologies currently used at the commercial scale are covered in depth.

Handbook of Separation Process Technology Ronald W. Rousseau, 1987-05-13 Surveys the selection design and operation of most of the industrially important separation processes. Discusses the underlying principles on which the processes are based and provides illustrative examples of the use of the processes in a modern context. Features thorough treatment of newer separation processes based on membranes adsorption chromatography ion exchange and chemical complexation. Includes a review of historically important separation processes such as distillation absorption extraction leaching and crystallization and considers these techniques in light of recent developments affecting them.
