Recent Progreb In Cardiovascular Mechanics:

Recent Progress in Cardiovascular Mechanics Saichi Hosoda,1994-01 **Recent Progress in Failing Heart Syndrome** Shigetake Sasayama,Hiroyuki Suga,2012-12-06 Heart failure is a syndrome caused by a heart dysfunction that leads to insuf ficient blood in the peripheral tissues for their metabolic demands This syn drome still remains an obscure clinical entity and even its definition is disputed It has become increasingly apparent that heart failure may relate not only to cardiac dysfunction but also to other physiological alterations involved in the maintenance of circulatory homeostasis In 1988 the Japanese Circulation Society organized a three year project for research on heart failure The research group consisted of ten investigators all relatively young but well recognized internationally for their research accomplishments This book represents a compilation of the achievements by this group during the past three years which have led to new insights into the pathophysiologic mechanisms of heart failure and diagnosis evaluation and treatment of this syndrome Contents include research into the cellular biology of congestive heart failure and a framework of pressure volume relationships enabling assessment of ventricular contraction energetics or coupling of ventricular properties and arterial load This conceptual framework is of vital significance particularly when we consider the failing heart as an energy depleted state An understanding of the neuroendocrine responses to explain the pathophy siology of congestive heart failure is perhaps the most important advance and has led to new developments in therapy This book also includes an analysis of mechanical factors including both regional and global ventricular functions and this is related to the under standing of the pathophysiology of congestive heart failure **Recent Advances in Mechanical Engineering** Anil Kumar,Amit Pal,Surendra Singh Kachhwaha,Prashant Kumar Jain,2021-05-25 This book presents the select proceedings of the second International Conference on Recent Advances in Mechanical Engineering RAME 2020 The topics covered include aerodynamics and fluid mechanics automation automotive engineering composites ceramics and polymers processing computational mechanics failure and fracture mechanics friction tribology and surface engineering heating and ventilation air conditioning system industrial engineering IC engines turbomachinery and alternative fuels machinability and formability of materials mechanisms and machines metrology and computer aided inspection micro and nano mechanics modelling simulation and optimization product design and development rapid manufacturing technologies and prototyping solid mechanics and structural mechanics thermodynamics and heat transfer traditional and non traditional machining processes vibration and acoustics The book also discusses various energy efficient renewable and non renewable resources and technologies strategies and technologies for sustainable development and energy environmental interaction The book is a valuable reference for beginners researchers and professionals interested in sustainable construction and allied fields
