

Recent Developments in Alexithymia Theory and Research

Graeme J Taylor, MD¹

Objectives: To review recent developments in alexithymia theory and research that are relevant to the field of psychosomatic medicine.

Methods: Articles were selected from the alexithymia literature published over the past decade that describe advances in the theoretical understanding of alexithymia or report empirical investigations of the relationships of the construct with emotion regulation and with somatic illness and disease. Empirical investigations of the neural correlates of alexithymia were reviewed also, as were studies that explore therapeutic attempts to modify alexithymic characteristics.

Results: The nature features of the alexithymia construct are now thought to reflect deficits in the cognitive processing and regulation of emotions. This is supported by studies showing that alexithymia is associated with maladaptive styles of emotion regulation, low emotional intelligence, a bidirectional interhemispheric transfer deficit, and reduced rapid eye movement (REM) density (number of eye movements divided by number of REM periods). Although empirical evidence demonstrates that alexithymia is associated with several somatic disorders, more prospective studies are required to establish the direction of causality. Preliminary data suggest that psychotherapies involving specific techniques to enhance emotional awareness and integrate symbolic and subymbolic elements of emotion schemas may be effective in reducing alexithymic characteristics.

Conclusions: Alexithymia is proving to be a theoretically useful construct for exploring the role of personality and emotions in the pathogenesis of certain somatic illnesses and diseases.

Key Words: alexithymia, emotion regulation, psychosomatic medicine

Alexithymia is a multifaceted personality construct that has been associated with various medical and psychiatric disorders. The construct was introduced by Nemiah and Sifneos during the early 1970s (1,2) and has gradually captured the attention of many psychiatrists and psychologists throughout the world. In particular, during the past 10 to 15 years, a substantial body of theory and research has emerged on the topic. While about 120 articles were published on alexithymia by the mid-1980s, a recent search of the PsycInfo database revealed well over 700 journal articles on alexithymia.

Many of the early studies on alexithymia are of questionable validity and generalizability, since they were conducted with rather hastily constructed measures that subsequently were shown to lack reliability and validity (3). Moreover, these early studies were initiated before the validity of the

alexithymia construct itself was established. Over the past decade, however, measurement-based and experimental studies have yielded considerable empirical support for the validity of the alexithymia construct (3-5). In addition, the development of the Toronto Alexithymia Scale (TAS) and the revised Twenty-Item Toronto Alexithymia Scale (TAS-20) provided reliable and valid methods for measuring the construct (6-8); these self-report scales have been cross-validated in diverse cultures and are now the most widely used measures of alexithymia (3,9-13).

The validation and measurement of the alexithymia construct have been described in detail in several previous contributions (3,4,14,15); this review focuses on research and theoretical developments over the past decade that are relevant to psychosomatic medicine. With a few exceptions (which will be noted), I will include only studies that used the TAS or TAS-20 to measure alexithymia.

What Is Alexithymia?

The alexithymia construct encompasses a cluster of cognitive and affective characteristics that were observed initially

Recent Developments in the Inverse Galois Problem Jointsummerresearchconf Onrecentdevel
Intheinverse,1995-07-30 This book contains the refereed proceedings of the AMS IMS SIAM Joint Summer Research Conference on Recent Developments in the Inverse Galois Problem held in July 1993 at the University of Washington Seattle A new review of Serre s Topics in Galois Theory serves as a starting point The book describes the latest research on explicit presentation of the absolute Galois group of the rationals Containing the first appearance of generalizations of modular curves the book presents applications that demonstrate the full scope of the Inverse Galois Problem In particular the papers collected here show the ubiquity of the applications of the Inverse Galois Problem and its compelling significance The book will serve as a guide to progress on the Inverse Galois Problem and as an aid in using this work in other areas of mathematics This includes coding theory and other finite field applications Group theory and a first course in algebraic curves are sufficient for understanding many papers in the volume Graduate students will find this an excellent reference to current research as it contains a list of problems appropriate for thesis material in arithmetic geometry algebraic number theory and group theory Recent Developments in Criminological Theory Scott A. Lukas,2017-07-05 This volume contains recent and cutting edge articles from leading criminological theorists The book is organized into ten sections each representing the latest in the multi disciplinary orientations representing a cross section of contemporary criminological theory These sections include 1 Classical and Rational Choice 2 Biological and Biosocial 3 Psychological 4 Social Learning and Neutralization 5 Social Control 6 Social Ecology Sub cultural and Cultural 7 Anomie and Strain 8 Conflict and Radical 9 Feminist and Gender 10 Critical Criminologies Anarchist Postmodernist Peacemaking The articles were selected based on their contributions to advancing the field including ways in which the authors of each chapter understand the current theoretical tendencies of their respective approaches and how they envision the future of their theories Because of this the articles focus on theory rather than empirical research Of particular note is the tendency toward integration of different perspectives as described by editors Henry and Lukas in their original introduction to this volume Recent Development In Theories And Numerics, Proceedings Of The International Conference On Inverse Problems Jin Cheng,Benny Yin-chung Hon,June-yub Lee,Masahiro Yamamoto,2003-04-08 The first International Conference on Inverse Problems was held at the City University of Hong Kong in January 2002 It addressed the theoretical mathematics applied engineering and development aspects of inverse problems It was intended to nurture Asian American European collaborations in this evolving interdisciplinary area The scope of the proceedings is wide reflecting the current flourishing theoretical and numerical researches on inverse problems The proceedings have been selected for coverage in Index to Scientific Technical Proceedings ISTP CDRom version ISI Proceedings Exploration in Development Issues Nurul Islam,2017-11-30 This title was first published in 2003 Nurul Islam currently head of economic and social policy at the FAO UN and a key advisor at the International Food Policy Research

Institute has been a renowned expert on economic development for the past thirty years. Over that time he has researched and written about a wide range of economic development issues focussing mainly on policy. For the first time ever his most important writings have been brought together in this volume reflecting not only Professor Islam's own views on particular issues but also providing a unique overview of the key debates and discussions taking place among academic economists and policy analysts over the past three decades. The collection is divided into three main sections: trade and aid development strategy and food security, the section on food security being the most recent. It discusses food security in a broad sense covering issues of availability and growth in food production, access or entitlement of individuals or households to basic food and variability in food supplies and prices. In the section on Development Strategy Professor Islam highlights how theoretical argument has veered away from organized development planning models which proved so important in the 1960s. He questions the role of models and policies throughout the decades and following articles written in the 1970s or 80s he includes articles he has recently completed assessing the previous ones from his current perspective. In the final section on Trade and Aid he follows the academic debate on trade and exchange rate policies in developing countries from the 1960s to the progress of the WTO forums of today. This is a wide ranging and thought provoking volume. No matter whether the subject in question was examined in the 1960s or currently Professor Islam provides a challenging and insightful analysis and even the earliest articles retain relevance and will be of continuing interest.

New Developments in Productivity Analysis

Charles R. Hulten, Edwin R. Dean, Michael Harper, 2007-11-01. The productivity slowdown of the 1970s and 1980s and the resumption of productivity growth in the 1990s have provoked controversy among policymakers and researchers. Economists have been forced to reexamine fundamental questions of measurement technique. Some researchers argue that econometric approaches to productivity measurement usefully address shortcomings of the dominant index number techniques while others maintain that current productivity statistics underreport damage to the environment. In this book the contributors propose innovative approaches to these issues. The result is a state of the art exposition of contemporary productivity analysis. Charles R. Hulten is professor of economics at the University of Maryland. He has been a senior research associate at the Urban Institute and is chair of the Conference on Research in Income and Wealth of the National Bureau of Economic Research. Michael Harper is chief of the Division of Productivity Research at the Bureau of Labor Statistics. Edwin R. Dean, formerly associate commissioner for Productivity and Technology at the Bureau of Labor Statistics, is adjunct professor of economics at The George Washington University.

New Analytic and Geometric Methods in Inverse Problems

Kenrick Bingham, Yaroslav V. Kurylev, E. Somersalo, 2013-04-17. In inverse problems the aim is to obtain via a mathematical model information on quantities that are not directly observable but rather depend on other observable quantities. Inverse problems are encountered in such diverse areas of application as medical imaging, remote sensing, material testing, geosciences and financing. It has become evident that new ideas coming from differential geometry and modern analysis are needed to tackle

even some of the most classical inverse problems This book contains a collection of presentations written by leading specialists aiming to give the reader up to date tools for understanding the current developments in the field Water power engineering, the theory, investigation and development Daniel Webster Mead,1915 **Infrastructure Investments in Developing Economies** Giang Dang,Low Sui Pheng,2014-10-18 This book aims to provide knowledge on how infrastructure is planned and built in a typical developing country and what key variables are there in the system limiting the efficient use of public investments in infrastructure The book begins with a comprehensive literature review on construction and economic development and trade and economic development The focus of the book is on the case of Vietnam with lessons drawn for other developing economies The book employs the mixed use of data to provide a stronger basis for analysis and interpretation of related government policies Based on the research findings the book recommends significant capacity building work for Vietnam to develop capacities that would remove constraints on the efficient use of public investments in infrastructure The general principles of significant capacity building work which are useful for policy implications are introduced in the book Analysts academics public and private communities in developing countries can adopt the research findings as guiding principles to bring about changes in their current use of public investments in infrastructure thus supporting their trade and economic growth in the long term *The Linear Sampling Method in Inverse Electromagnetic Scattering* Fioralba Cakoni,David Colton,Peter Monk,2011-01-01 The linear sampling method is the oldest and most developed of the qualitative methods in inverse scattering theory It is based on solving a linear integral equation and then using the equation's solution as an indicator function for the determination of the support of the scattering object This book describes the linear sampling method for a variety of electromagnetic scattering problems It presents uniqueness theorems and the derivation of various inequalities on the material properties of the scattering object from a knowledge of the far field pattern of the scattered wave **International Direct Investment** ,1988 **Adolescents in a changing world** World Health Organization,2024-05-28 This is the full global report to undergo WHO editing and be submitted for clearance **Complex Systems in Biomedicine** A. Investment and Agricultural Development in Developing Countries Cuong Tat Do,2015-12-03 The standard policy prescription to enhance the productivity of agriculture in a developing country like Vietnam is first to encourage the investment of farmers in their human and social capital and then to change the governmental institutions to facilitate the farmers investment This book therefore analyzes the investment of farmers in their health education and social relationships in the context of Vietnams recent agrarian transition Using the tools of regression analysis the author has tried to measure the rate of return of investment in health education and social relationship of farmers on their income Additionally to measure the effect of local government policy on the performance of agricultural firms at the provincial level the book applies current techniques to estimate the relationship between output of agricultural firms and performance of local government As in other low developed countries the rate of return of investment in education is quite extreme and the rate of investment in health is small The effect of investment in social capital of farmers on their income is quite complex due to the complication of the term social capital Moreover the effect of quality of local institutions on performance of agricultural firms at the provincial level is not quite statistically significant The relationship is similar with other research findings worldwide when researchers want to measure the effect of quality of institution on the performance of firms

The Impact of Investment Treaty Law on Host States Mavluda Sattorova,2018-02-08 Traditionally international investment law was conceptualised as a set of norms aiming to ensure good governance for foreign investors in exchange for their capital and know how However the more recent narratives postulate that investment treaties and investor state arbitration can lead to better governance not just for foreign investors but also for host state communities Investment treaty law can arguably foster good governance by holding host governments liable for a failure to ensure transparency stability predictability and consistency in their dealings with foreign investors The recent proliferation of such narratives in investment treaty practice arbitral awards and academic literature raises questions as to their juridical conceptual and empirical underpinnings What has propelled good governance from a set of normative ideals to enforceable treaty standards Does international investment law possess the necessary characteristics to inspire changes at the national level How do host states respond to investment treaty law The overarching objective of this monograph is to unpack existing assumptions concerning the effects of international investment law on host states By combining doctrinal empirical comparative analysis and unveiling the emerging nationally felt responses to international investment norms the book aims to facilitate a more informed understanding of the present contours and the nature of the interplay between international investment norms and national realities
