Kallio, 1979 Recent Progress In Many-body Theories - Proceedings Of The 11th International Conference Raymond F Bishop, Tobias Brandes, Klaus A Gernoth, Niels R Walet, Yang Xian, 2002-12-16 Quantum many body theory as a discipline in its own right dates largely from the 1950 s It has developed since then to its current position as one of the cornerstones of modern theoretical physics The field remains vibrant and active vigorous and exciting Its most powerful techniques are truly universal They are constantly expanding to find new fields of application while advances continue to be made in the more traditional areas To commemorate the impending 80th birthdays of its two co-inventors Fritz Coester and Hermann K mmel one such technique

namely the coupled cluster method was especially highlighted at this meeting the eleventh in the series of International Conferences on Recent Progress in Many Body Theories The history of the coupled cluster method as told here mirrors in many ways both the development of the entire discipline of microscopic quantum many body theory and the history of the series of conferences The series itself is universally recognised as being the premier series of meetings in this subject area Its proceedings have always summarised the current state of the art through the lectures of its leading practitioners The present volume is no exception No serious researcher in quantum many body theory or in any field which uses it can afford to be without this volume Recent Progress in MANY-BODY THEORIES A.J. Kallio,E. Pajanne,R.F. Bishop,2013-03-14 The present volume contains the texts of the invited talks delivered at the Fifth International Conference on Recent Progress in Many Body Theories held in Oulu Finland during the period 3-8 August 1987 The general format and style of the meeting followed closely those which had evolved from the earlier conferences in the series Trieste 1978 Oaxtepec 1981 Altenberg 1983 and San Francisco 1985 Thus the conferences in this series are intended as far as is practicable to cover in a broad and balanced fashion both the entire spectrum of theoretical tools developed to tackle the quantum many body problem and their major fields of application One of the major aims of the series is to foster the exchange of ideas and techniques among physicists working in such diverse areas of application of many body theories as nucleon-nucleon interactions nuclear physics astronomy atomic and molecular physics quantum chemistry quantum fluids and plasmas and solid state and condensed matter physics A special feature of the present meeting however was that particular attention was paid in the programme to such topics of current interest in solid state physics as high temperature superconductors heavy fermions the quantum Hall effect and disorder A panel discussion was also organised during the conference under the chairmanship of N.W. Ashcroft to consider the latest developments in the extremely rapidly growing field of high T superconductors *Recent Progress in Many-Body Theories* H. Mitter,E. Schachinger,H. on Recent Progress in Many Body Theories RPMBT14 held at the Technical University of Catalonia Spain in July 2007 This conference which was first held in Trieste in 1979 is devoted to new developments in the field of many body theories which are being applied and developed in a rapidly growing number of fields The emphasis is twofold progress in the technical aspects of microscopic theories and a review of recent applications of many body techniques In addition to the more traditional topics such as nuclear physics and quantum liquids the present volume also includes the most recent results on atomic physics cold Bose and Fermi gases phase transitions and quantum information Moreover the volume contains the lectures of the winners of the 2007 Feenberg Medal and 2007 Kuemmel Award as well as their laudations Recent Progress in Many-body Theories Raymond F. Bishop, 2000 Quantum many body theory as a discipline in its own right dates largely from the 1950 s It has developed since then to its current position as one of the cornerstones of modern theoretical physics The field remains vibrant and active vigorous and exciting Indeed its successes and importance were vividly illustrated prior to the conference by the sharing of the 1998 Nobel Prizes in both Physics and Chemistry by three many body theorists Two of those Nobel laureates Walter Kohn and Bob Laughlin delivered invited lectures at this meeting the tenth in the series of International Conferences on Recent Progress in Many Body Theories This series is universally recognized as being the premier series of meetings on this subject and its proceedings have always summarized the current state of the art through the lectures of its leading practitioners The present volume is no exception A major aim of this conference series has been to foster the exchange of ideas between physicists working in all the diverse fields of application of quantum many body theory These include nuclear and subnuclear physics quantum fluids strongly correlated electronic systems and low dimensional condensed matter systems and materials All of these fields and others are represented in the present volume Other topical themes covered include density functional theory and its applications to nuclear and electronic systems quantum dots and chaos and trapped Bose Einstein condensates Through this breadth of applications the reader will get a clear illustration of the power of the tools of modern microscopic quantum many body theory and their usefulness both in achieving a commonality of approach and understanding and in transferring powerful ideas from one field to another *Recent Progress in Many-Body Theories* Y. Avishai, 2012-12-06 The present volume contains the texts of the invited talks delivered at the Sixth International Conference on Recent Progress in Many Body Theories held in Arad Israel during the period November 5 10 1989 The host institute was the Physics Department at the Ben Gurion University of the Negev Beside the invited talks there have been also two poster sessions The general format and style of the meeting followed closely those which had preceded it and evolved from the earlier conferences in the series Trieste 1978 Oxtapec 1981 Altenberg 1983 San Francisco 1985 and Oulu 1987 The conferences in this series are intended to cover the broad spectrum of modern physics related to the many body problem It starts on the smallest length scales in dealing with quark gluon plasmas and ends on the largest length scales in tackling many body problems in astrophysics In between it is concerned with nuclear physics solid state physics

statistical mechanics field theory molecular dynamics hydrodynamics chaos etc Like in the Oulu conference special emphasis has been put on recent developments in high T_c superconductivity Beside the half day session devoted to it we have also organized an evening round table discussion on the future of the whole subject Furthermore a new and in the opinion of the editor a very refreshing element which was absent in earlier conferences was the presentation of a few talks by experimentalists
