Mathematical Correspondences and Critical Editions

Maria Teresa Borgato, Erwin Neuenschwander, Irène Passeron, 2019-03-22. Mathematical correspondence offers a rich heritage for the history of mathematics and science as well as cultural history and other areas. It naturally covers a vast range of topics and not only of a scientific nature; it includes letters between mathematicians but also between mathematicians and politicians, publishers and men or women of culture. Wallis, Leibniz, the Bernoullis, D'Alembert, Condorcet, Lagrange, Gauss, Hermite, Betti, Cremona, Poincaré and van der Waerden are undoubtedly authors of great interest, and their letters are valuable documents, but the correspondence of less well-known authors too can often make an equally important contribution to our understanding of developments in the history of science. Mathematical correspondences also play an important role in the editions of collected works, contributing to the reconstruction of scientific biographies as well as the genesis of scientific ideas and in the correct dating and interpretation of scientific writings. This volume is based on the symposium *Mathematical Correspondences and Critical Editions* held at the 6th International Conference of the ESHS in Lisbon, Portugal, in 2014. In the context of the more than fifteen major and minor editions of mathematical correspondences and collected works presented in detail, the volume discusses issues such as: History and prospects of past and ongoing edition projects; Critical aspects of past editions; The complementary role of printed and digital editions; Integral and partial editions of correspondence; Reproduction techniques for manuscripts, images and formulae; and the editorial challenges and opportunities presented by digital technology. *Recherches sur Diderot et sur l'Encyclopédie* Société Diderot, 2025.

Evolutionism in Eighteenth-century French Thought Mary Efron Gregory, 2008 This book examines how eighteenth century French theorists Maillat Montesquieu La Mettrie Buffon Maupertuis Diderot Rousseau and Voltaire addressed evolutionism Each thinker laid down a building block that would eventually open the door to the mutability of species and a departure from the long held belief that the chain of beings is fixed This book describes how the philosophes established a triune relationship among contemporary scientific discoveries random creationism propelled by the motive and conscious properties of matter and the notion of the chain of being along with its corollaries plenitude and continuity Also addressed is the contemporary debate over whether apes could ever be taught to speak as well as the issue of race and the family of man

The Man Who Flattened the Earth Mary Terrall, 2006-05-05 Self styled adventurer literary wit philosopher and statesman of science Pierre Louis Moreau de Maupertuis 1698-1759 stood at the center of Enlightenment science and culture Offering an elegant and accessible portrait of this remarkable man Mary Terrall uses the story of Maupertuis's life self fashioning and scientific works to explore what it meant to do science and to be a man of science in eighteenth century Europe Beginning his scientific career as a mathematician in Paris Maupertuis entered the public eye with a much discussed expedition to Lapland which confirmed Newton's calculation that the earth was flattened at the poles He also made significant and often intentionally controversial contributions to physics life science navigation astronomy and metaphysics Called to Berlin by Frederick the Great Maupertuis moved to Prussia to preside over the Academy of Sciences there Equally at home in salons cafés scientific academies and royal courts Maupertuis used his social connections and his printed works to enhance a carefully constructed reputation as both a man of letters and a man of science His social and institutional affiliations in turn affected how Maupertuis formulated his ideas how he presented them to his contemporaries and the reactions they provoked Terrall not only illuminates the life and work of a colorful and important Enlightenment figure but

also uses his story to delve into many wider issues including the development of scientific institutions the impact of print culture on science and the interactions of science and government Smart and highly readable Maupertuis will appeal to anyone interested in eighteenth century science and culture Terrall s work is scholarship in the best sense Her explanations of arcane 18th century French physics mathematics astronomy and biology are among the most lucid available in any language Virginia Dawson American Historical Review Winner of the 2003 Pfizer Award from the History of Science Society
