Distinguished Figures in Mechanism and Machine Science Marco Ceccarelli, 2009-12-01 This is the second volume of a series of edited books whose aim is to collect contributed papers within a framework that can serve as a collection of persons in MMS Mechanism and Machine Science This is a continuation of the first volume that was published in 2008 again combining very ancient and very recent scholars in order to give not only an encyclopaedic character to this project but also to emphasize the significance of MMS over time This project has the characteristic that the papers illustrate by recognizing persons and their scientific work mainly technical developments in the historical evolution of the fields that today are grouped in MMS Thus emphasis is also given to biographical notes describing efforts and experiences of people who have contributed to the technical achievements whose technical survey is the core of each contributed paper This second volume of the project has been possible thanks to the invited authors who have enthusiastically shared in this initiative and who have spent time and effort in preparing the papers The stand alone papers cover the wide field of the History of Mechanical Engineering with specific focus on MMS I believe that readers will take advantage of the papers in this book and future ones by supplying further satisfaction and motivation for her or his work historical or not

David Todd, 2023-08-22 An abundantly illustrated narrative that draws from the history of art science technology artificial intelligence psychology religion and conservation in telling the extraordinary story of a Renaissance robot that prays This volume tells the singular story of an uncanny rare object at the cusp of art and science a 450 year old automaton known as the monk The walking gesticulating figure of a friar in the collection of the Smithsonian Institution's National Museum of American History is among the earliest extant ancestors of the self propelled robot According to legend connected to the court of Philip II of Spain the monk represents a portrait of Diego de Alcalá a humble Franciscan lay brother whose holy corpse was said to be agent to the miraculous cure of Spain's crown prince as he lay dying in 1562 In tracking the origins of the monk and its legend the authors visited archives libraries and museums across the United States and Europe probing the paradox of a mechanical object performing an apparently spiritual act They identified seven kindred automata from the same period which they argue form a paradigmatic class of walking prime movers unprecedented in their combination of visual

and functional realism While most of the literature on automata focuses on the Enlightenment this enthralling narrative journeys back to the late Renaissance when clockwork machinery was entirely new foretelling the evolution of artificial life to come

A Brief Illustrated History of Machines and Mechanisms Emilio Bautista Paz, Marco Ceccarelli, Javier Echávarri Otero, José Luis Muñoz Sanz, 2010-08-02 Machines have always gone hand in hand with the cultural development of mankind throughout time A book on the history of machines is nothing more than a specific way of bringing light to human events as a whole in order to highlight some significant milestones in the progress of knowledge by a complementary perspective into a general historical overview This book is the result of common efforts and interests by several scholars teachers and students on subjects that are connected with the theory of machines and mechanisms In fact in this book there is a certain teaching aim in addition to a general historical view that is more addressed to the achievements by homo faber than to those by homo sapiens since the proposed history survey has been developed with an engineering approach The brevity of the text added to the fact that the authors are probably not competent to tackle historical studies with the necessary rigor means the content of the book is inevitably incomplete but it nevertheless attempts to fulfil three basic aims First it is hoped that this book may provide a stimulus to promote interest in the study of technical history within a mechanical engineering context Few are the countries where anything significant is done in this area which means there is a general lack of knowledge of this common cultural heritage

The Restless Clock

Jessica Riskin, 2016-03-10 A wide ranging witty and astonishingly learned scientific and cultural history of the concept of the capacity to act in nature London Review of Books Today a scientific explanation is not meant to ascribe agency to natural phenomena we would not say a rock falls because it seeks the center of the earth Even for living things in the natural sciences and often in the social sciences the same is true A modern botanist would not say that plants pursue sunlight This has not always been the case nor perhaps was it inevitable Since the seventeenth century many thinkers have made agency in various forms central to science The Restless Clock examines the history of this principle banning agency in the life sciences It also tells the story of dissenters embracing the opposite idea that agency is essential to nature The story begins with the automata of early modern Europe as models for the new science of living things and traces questions of science and agency through Descartes Leibniz Lamarck and Darwin among many others Mechanist science Jessica Riskin shows had an associated theology the argument from design which found evidence for a designer in the mechanisms of nature Rejecting such appeals to a supernatural God the dissenters sought to naturalize agency rather than outsourcing it to a divine engineer Their model cast living things not as passive but as active self making machines The conflict between passive and active mechanist approaches maintains a subterranean life in current science shaping debates in fields such as evolutionary biology cognitive science and artificial intelligence This history promises not only to inform such debates but also our sense of the possibilities for what it means to engage in science and even what it means to be alive Praise for The Restless Clock A wonderful contribution and much needed corrective to the history of European ideas about life and matter Evelyn Fox Keller author of The Mirage of a Space between Nature and Nurture Engrossing and illuminating Nature A sweeping survey of the search for answers to the mystery of life Riskin writes with clarity and wit and the breadth of her scholarship is breathtaking Times Higher Education UK
