Elliptic Curves and Modular Forms in Algebraic Topology Peter S. Landweber, 2006-11-15 A small conference was held in September 1986 to discuss new applications of elliptic functions and modular forms in algebraic topology which had led to the introduction of elliptic genera and elliptic cohomology. The resulting papers range from these topics through to quantum field theory with considerable attention to formal groups, homology and cohomology theories and circle actions on spin manifolds. Ed Witten's rich article on the index of the Dirac operator in loop space presents a mathematical treatment of his interpretation of elliptic genera in terms of quantum field theory. A short introductory article gives an account of the growth of this area prior to the conference.

Partial Differential Equations and Calculus of Variations Stefan Hildebrandt, Rolf Leis, 2006-11-14 This volume contains 18 invited papers by members and guests of the former Sonderforschungsbereich in Bonn SFB 72 who over the years collaborated on the research group Solution of PDEs and Calculus of Variations. The emphasis is on existence and regularity results on special equations of mathematical physics and on scattering theory.

The Arcata Conference on Representations of Finite Groups, Part 1 Paul Fong, 1987 The papers in these proceedings of the 1986 Arcata Summer Institute bear witness to the extraordinarily vital and intense research in the representation theory of finite groups. The confluence of diverse mathematical disciplines has brought forth work of great scope and depth. Particularly striking is the influence of algebraic geometry and cohomology theory in the modular representation theory and the character theory of reductive groups over finite fields and in the general modular representation theory of finite groups. The continuing developments in block theory and the general character theory of finite groups is noteworthy. The expository and research aspects of the Summer Institute are well represented by these papers.

Model Theoretic Algebra With Particular Emphasis on Fields, Rings, Modules Christian.U Jensen,2022-03-10 This volume highlights the links between model theory and algebra The work contains a definitive account of algebraically compact modules a topic of central importance for both module and model theory Using concrete examples particular emphasis is given to model theoretic concepts such as axiomizability Pure mathematicians especially algebraists ring theorists logicians model theorists and representation theorists should find this an absorbing and stimulating book *Numerical Analysis and Parallel Processing* Peter R. Turner,2006-11-14 Each week of this three week meeting was a self contained event although each had the same underlying theme the effect of parallel processing on numerical analysis Each week provided the opportunity for intensive study to broaden participants research interests or deepen their understanding of topics of which they already had some knowledge There was also the opportunity for continuing individual research in the stimulating environment created by the presence of several experts of international stature This volume contains lecture notes for most of the major courses of lectures presented at the meeting they cover topics in parallel algorithms for large sparse linear systems and optimization an introductory survey of level index arithmetic and superconvergence in the finite element method

Stochastic Mechanics and Stochastic Processes Aubrey Truman,Ian M. Davies,2006-11-15 The main theme of the meeting was to illustrate the use of stochastic processes in the study of topological problems in quantum physics and statistical mechanics Much discussion of current problems was generated and there was a considerable amount of interaction between mathematicians and physicists The papers presented in the proceedings are essentially of a research nature but some Lewis Hudson are introductions or surveys **Geometry and Analysis on Manifolds** Toshikazu

Sunada,2006-11-14 The Taniguchi Symposium on global analysis on manifolds focused mainly on the relationships between some geometric structures of manifolds and analysis especially spectral analysis on noncompact manifolds Included in the present volume are expanded versions of most of the invited lectures In these original research articles the reader will find up to date accounts of the subject **Dynamical Systems** Rodrigo Bamon,Rafael Labarca,Jacob Jr. Palis,2006-11-14 This

volume contains original research papers on topics central to Dynamical Systems such as fractional dimensions Hausdorff dimension limity capacity and limit cycles of polynomial vector fields concerning the well known Dulac and Hilbert s 16th problems Stability and bifurcations intermittency normal forms Anosov flows and foliations are also themes treated in the papers Many of the authors are renowned for their important contributions to the field This volume should be of much interest to people working in dynamical systems including physicists biologists and engineers Complex Analysis Steven G. Krantz,2006-11-14 This conference gathered together a small group of people with similar interests in the geometric function

theory of several complex variables While the speeches were of a specialized nature the papers in the proceedings are largely of a survey and speculative nature The volume is intended to serve both students and researchers as an invitation to active new areas of research The level of the writing has been intentionally set in such a way that the papers will be accessible to a broad audience Complex Analysis III Carlos A. Tamburini, 2013-12-01 On September 17 1996 a conference on Groups and Geometries took place in lovely Siena Italy It brought together experts and interested mathematicians from numerous countries The scientific program centered around invited expository lectures there also were shorter research announcements including talks by younger researchers The conference concerned a broad range of topics in group theory and geometry with emphasis on recent results and open problems Special attention was drawn to the interplay between group theoretic methods and geometric and combinatorial ones Expanded versions of many of the talks appear in these Proceedings This volume is intended to provide a stimulating

collection of themes for a broad range of algebraists and geometers Among those themes represented within the conference or these Proceedings are aspects of the following 1 the classification of finite simple groups 2 the structure and properties of groups of Lie type over finite and algebraically closed fields of finite characteristic 3 buildings and the geometry of projective and polar spaces and 4 geometries of sporadic simple groups We are grateful to the authors for their efforts in providing us with manuscripts in LaTeX Barbara Priwitzer and Thomas Hintermann Mathematics Editors of Birkhauser have been very helpful and supportive throughout the preparation of this volume
