## **Reproduction In Mammals 1 6:**

Mammals of Africa: Volume IV Jonathan Kingdon, 2014-11-20 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal. This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology, distribution, biology and evolution, including reference to fossil and molecular data of Africa's mammals. With more than 1 160 species and 16 18 orders, Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format with detailed profiles of every species and higher taxa. The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned, as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Edited by Jonathan Kingdon, David Happold, Tom Butynski, Mike Hoffmann, Meredith Happold and Jan Kalina and written by more than 350 authors, all experts in their fields, Mammals of Africa is as comprehensive a compendium of current knowledge as is possible. Extensive references alert readers to more detailed information. Volume IV, edited by Meredith Happold and David Happold, contains profiles of 156 species of insectivores, comprising the hedgehogs and shrews. The rest of the volume is devoted to the 224 species of African bats. The latter are divided into nine families, namely fruit bats, horseshoe bats, leaf-nosed bats, false vampire bats, mouse-tailed bats, sheath-tailed bats, slit-faced bats, free-tailed bats and vesper bats.

Encyclopedia of Reproduction, 2018-06-29 Encyclopedia of Reproduction, Second Edition, Six Volume Set comprehensively reviews biology and abnormalities, also covering the most common diseases in humans such as prostate and breast cancer, as well as normal developmental biology, including embryogenesis, gestation, birth and puberty. Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers, from advanced undergraduate students to research professionals. Chapters also explore the latest advances in cloning, stem cells, endocrinology, clinical reproductive medicine and genomics. As reproductive health is a fundamental component of an individual's overall health status and a central determinant of quality of life, this book provides the most extensive and authoritative reference within the field. Provides a one-stop shop for information on reproduction that is not available elsewhere. Includes extensive coverage of the full range of topics, from basic to clinical considerations, including evolutionary advances in molecular, cellular, developmental and clinical sciences. Includes multimedia and interactive teaching tools such as downloadable PowerPoint slides, video content and interactive elements such as the Virtual Microscope. The Ecology of Reproduction in Wild and Domestic Mammals R.M. Sadler, 2012-12-06 49 about six months to well over a year. If there is only one part of the year that is favourable, such as spring and early summer in the temperate climates, then each species must make an evolutionary choice, so to speak, as to which parts of the reproductive cycle—conception, gestation, lactation or weaning—

must be protected and which can come in less favourable times of the year The rhesus and langur monkeys of northern India give birth during the time of year when temperatures are hottest and wells and tanks are often dry However gestation and the later months of lactation come during the monsoon season when food and water are abundant In contrast the east African baboons give birth at the beginning of the small rains and gestation and the late part of lactation occur during the six months dry season Whether any pattern of relationship will be found to hold true for other species of primates is still not clear It may be that a wide variety of patterns have evolved depending on the lengths of gestation and lactation and the particular ecological complex in which each species or even subspecies lives pages 503 504      *4000 Quizzes* Pustak Mahal Editorial Group, 2002-04-05 It is a common sentiment expressed by many students from time to time The answer to this is simple Taking an exam is an art and only he who approaches the task in a more systematic and scientific manner comes out a winner One common aspect of the exam taking strategy is revision The ability to answer random questions about your subject can clearly demonstrate the extent of your preparation Now this book makes revision easier and convenient for all science students Written by leading experts in the field it helps students with quick revisions in one line questions with one word answers
