Reproduction and Development of Marine Invertebrates of the Northern Pacific Coast Megumi F. Strathmann, 2017-09-05

This reference work is designed to provide background information on an array of northeastern Pacific marine invertebrate species so that they can be more easily included in comparative studies of morphology cell biology reproduction embryology larval biology and ecology It is meant to serve biologists who are new to the field as well as experienced investigators who may not be familiar with the invertebrate fauna of the northern Pacific Coast The species discussed in this volume are mostly from the cold temperate waters of the San Juan Archipelago near Puget Sound and the Strait of Georgia but the information and methods given will be useful in laboratories from Alaska to central California and applicable to some extent in other coastal or inland facilities An introductory chapter discusses basic procedures for collecting and maintaining mature specimens for initiating spawning and for culturing embryos and larvae in the laboratory Subsequent chapters summarize reproduction and development in thirty different invertebrate groups and provided recent references through which additional information can be traced cite monographs or keys needed to identify species and give methods useful for studying an array of selected species Available information on habitat diet reproductive mode egg size developmental pattern developmental times larval type and conditions for settlement and metamorphosis is reported for over 450 species

Elena Mente, 2008-01-04 Crustaceans adapt to a wide variety of habitats and ways of life They have a complex physiological structure particularly with regard to the processes of growth molting metabolic regulation and reproduction Crustaceans are ideal as model organisms for the study of endocrine disruption and stress physiology in aquatic invertebrates This book

Biology of Copepods Geoffrey Boxshall, H.K. Schminke, 2012-12-06 This volume contains the Proceedings of the Third

International Conference on Copepoda held at the British Museum Natural History in London during August 1987 The central theme of the conference was the biology of marine planktonic copepods although the scientific programme was extremely varied reflecting the wide range of life styles adopted by copepods The three invited symposia held during the conference focussed attention on particular topical areas of research within the field of marine plankton and also provided reviews of chosen aspects of copepod biology These symposia were highly successful The papers they contained were both informative and stimulating and they bring to this volume a lasting significance Each symposium was organised by its chairman Bruce Frost University of Washington decided on the balance of topics selected the speakers and introduced the session on The biology and taxonomy of Calanus Roger Harris Marine Biological Association performed the same vital role for Experimental studies rate processes in field populations of planktonic copepods and Howard Roe Institute of Oceanographic Sciences for Oceanic and deep sea copepods The impact of these papers will be much enhanced by the large number of high quality contributed and poster papers on marine plankton and by the invited review of Copepod luminescence

by Peter Herring Institute of Oceanographic Sciences The fascinating review of Copepod eyes by Mike Land FRS University of Sussex is not published here

Evolution of Sexual Reproduction in Marine Invertebrates Andrew (Andrey N.) Ostrovsky, 2013-12-16 Three major aspects that distinguish this book are that 1 it contains the most detailed analysis of the sexual reproduction oogenesis fertilization and embryonic incubation in a particular phylum of the aquatic invertebrates Bryozoa ever made this analysis is based on an exhaustive review of the literature on that topic published over the last 260 years as well as extensive original histological anatomical and morphological data obtained during studies of both extant and extinct species 2 this broad analysis has made it possible to reconstruct the major patterns stages and trends in the evolution of sexual reproduction in various bryozoan clades showing numerous examples of parallelisms during transitions from broadcasting to embryonic incubation from planktotrophic to non feeding larvae and from lecithotrophy to placentation corresponding shifts in oogenesis fertilization and embryonic development are discussed in detail and 3 the key evolutionary novelties acquired by Bryozoa are compared with similar innovations that have evolved in other groups of marine invertebrates showing the general trends in the evolution of their sexual reproduction Ecological background of these innovations is considered too Altogether these aspects make the monograph an Encyclopedia of bryozoan sexual reproduction offering an integral picture of the evolution of this complex phenomenon

Sperm Biology Scott S. Pitnick, Dave J. Hosken, Tim R. Birkhead, 2008-11-21 Sperm Biology represents the first analysis of the evolutionary significance of sperm phenotypes and derived sperm traits and the possible selection pressures responsible for sperm egg coevolution An understanding of sperm evolution is fast developing and promises to shed light on many topics from basic reproductive biology to the evolutionary process itself as well as the sperm proteome the sperm genome and the quantitative genetics of sperm The Editors have identified 15 topics of current interest and biological significance to cover all aspects of this bizarre fascinating and important subject It comprises the most comprehensive and up to date review of the evolution of sperm and pointers for future research written by experts in both sperm biology and evolutionary biology The combination of evolution and sperm is a potent mix and this is the definitive account The first review survey of this emerging field Written by experts from a broad array of disciplines from the physiological and biomedical to the ecological and evolutionary Sheds light on the intricacies of reproduction and the coevolution of sperm egg and reproductive behavior

Reproduction, Larval Biology, and Recruitment of the Deep-sea Benthos Craig M. Young, Kevin J. Eckelbarger, 1994 The fifteen chapters which

comprise this study explore the most fundamental biological processes in the largest and least understood habitat on earth the deep sea

Ecology of Marine Invertebrate Larvae Larry McEdward, 2020-04-08 This is the first book to provide a detailed treatment of the field of larval ecology The 13 chapters use state of the art reviews and critiques of nearly all of the major topics in this diverse and rapidly growing field Topics include patterns of larval diversity reproductive energetics spawning ecology life history theory larval feeding and nutrition larval mortality behavior and locomotion larval transport dispersal population genetics recruitment dynamics and larval evolution Written by the leading new scientists in the field chapters define the current state of larval ecology and outline the important questions for future research

Reproduction and Development in Minor Phyla T. J. Pandian, 2021-05-13 The 26 recognized minor phyla comprise aberrant clades as most of them terminate as blind offshoots Untied from the discussion on their phylogenesis of minor phyla this book is largely devoted for the first time to aspects of reproduction and development in minor phyletics The minor phyla are not as speciose 1 795 species phylum as the major phyla 157 066 species phylum are The accumulation of deleterious genes causes inbreeding depression among progenies arising from parthenogenesis clonal multiplication and selfing hermaphrodites The reason for the limited species diversity in minor phyla is traced to i eutelism in 65 7% of minor phyletics and ii existence of 21 6% clonals iii 6 4% parthenogens and iv 1 2% selfing hermaphroditism Gonochorism obligately requires motility to search for a mate The combination of low motility and gonochorism from Placozoa to hemocoelomatic minor phyla has limited diversity to

Sexual Biology and Reproduction in Crustaceans Thanumalaya Subramoniam, 2016-09-27 Sexual Biology and Reproduction in Crustaceans covers crustacean reproduction as it deals with the structural morphology of the gamete producing primary sex organs such as the testis and ovary the formation and maturation of gametes their fusion during fertilization and embryonic development that lead to the release of larvae Constituting a diverse assemblage of animals crustaceans are best known by their common representatives such as shrimps lobsters and crabs but also include many more less familiar but biologically important forms This work covers the variety of ways in which both male and female gametes are produced by evolving different sexual systems in crustaceans the range of reproductive systems and the accordingly and highly diverse mechanistic modes of sex determination In addition the book features such topics as genetic and environmental determinants in sex determination pattern variability of mechanisms of fertilization among different species the origin of different mating systems the associated mating and brooding behaviors and the adaptive ability to different environmental conditions with discussion on the evolutionary ecology of social and sexual

systems in certain species which have shown eusocial tendencies similar to social insects Marine species occupying diversified ecological niches in tropical and temperate zones reproduce under definitive environmental conditions Therefore reproductive ecology of different crustaceans inhabiting different ecological niches also constitutes another important aspect of the work along with yolk utilization and embryogenesis leading to release of different larval forms which reflect on their aquatic adaptability Forms a valuable source of recent references on the current research in crustacean reproductive physiology Covers various mating and breeding systems providing illustrative examples for sexual selection parental care of developing eggs and embryos and the evolution of other reproductive behaviors Features contributions written in the form of review articles enabling readers to not only gain information in the respective subject but also help them stimulate ideas in their chosen field of research Includes a glossary created by the author to define technical terms Demonstrates the ability of crustacean species to serve as useful model systems for other organisms to investigate issues related to sexual conflict mate choice and sperm competition Discusses techniques in endocrine research to help researchers in aquaculture develop protocols in the control of reproduction

Aquatic Oligochaeta R.O. Brinkhurst, R.J. Diaz, 2012-12-06

The Third International Symposium on Aquatic Oligochaeta was organized by Drs O Giere M Dzwillo R Grimm and colleagues Over 50 scientists attended and while the number of nationalities dropped from 17 to 12 we were pleased to welcome our first Chinese delegation At a brief business meeting the invitation to attend the Fourth Symposium at Baton Rouge Louisiana US A hosted by Walter Harman in 1988 was approved The meeting is scheduled to begin on March 15 An invitation to hold the meeting in the Soviet Union was presented for Thermo Timm in his absence and it was agreed unanimously that the 1991 meetings be held there perhaps at Thllin on the Gulf of Finland Christer Erseus has agreed to consider G6teborg Sweden as an alternate for 1991 and as a positive invitation for 1994 so we are well prepared for the future Olav Giere has recently expressed opinions about publishing the proceedings of conferences that make it clear why he is not the editor of this volume Michael Dzwillo was prevented from completing the task by pressure of other business and so we undertook the task somewhat late While we share much of Olav Giere's concern about such volumes an honest attempt to review the papers does help to maintain quality and both of us wish to thank contributors for their positive response to our often quite drastic re writing of manuscripts
